

Kinhal - Karnataka

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of **traditional Kinhal craft from Koppal, Karnataka**. Build the image as if it comes from the real **Chitragar** craft world of Kinhal: a wooden core shaped and corrected with additive hand-built compounds, enriched with embossed ornament, then finished with bright hand painting and varnished devotional/thematic clarity. The image must read first as **Kinhal**, not as a generic painted wooden toy, not as a smooth molded idol, not as a plain carved figurine with color added later, and not as a decorative folk object without built-body intelligence.

Use real construction logic. The form must feel **made**, not merely carved. Build the world through **wood-core body structure, additive shaping, surface correction, ornament build-up, and painted symbolic finish**. Every visible figure, animal, ritual object, mask, palanquin, vahana, or support form must feel like it has been constructed outward by hand and then resolved through paint, not simply carved from one piece and decorated afterward.

Use real whole-world translation logic. Do not only change material or color. Rebuild **shape, silhouette, contour behavior, volume grouping, light logic, value separation, surface articulation, and object-world physics** through Kinhal grammar. Figures should feel emblematic and crafted. Ornament should feel attached to the body. Paint should organize identity and hierarchy. The entire world must feel born from Kinhal object-making, not from ordinary realism.

Use real figure logic. If the subject is devotional, the figure must feel symbolically readable and ritual-object-like, not anatomically realistic. If the subject is thematic or playful, it must still carry the gravity of a handmade cultural object, not a modern toy collectible. Keep the forms stable, frontal or object-readable, and built for clarity.

Use real environment logic. Space must remain subordinate to the **crafted object-world**. Even if a background appears, it must support figure readability and thematic grouping rather than overpowering the object with cinematic realism.

Do not make it generic Indian wooden folk art.
Do not make it Channapatna-like lacquer toy logic.
Do not make it realism-first sculpture with colorful paint.
Do not make ornament only painted and not built.
Do not let any major element belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE]** in the authentic visual logic of **traditional Kinalha craft from Koppal, Karnataka**.

Treat the style as:

a built wooden figure-and-idol system,
a Chitrakar craft world,
an additive body-and-surface construction language,
and a painted devotional/thematic object tradition where the whole world is generated by
crafted symbolic forms.

Core style system to preserve:

- wood-core plus additive-built body logic
- surface correction and build-up memory
- embossed ornament as structural articulation
- bright painted symbolic readability
- devotional/thematic object-world presence
- Kinalha/Koppal/Chitrakar grounding
- full-frame consistency so every visible element belongs to one Kinalha world

Translate the image like this:

- **[MAIN SUBJECT / MAIN FORM]** becomes a Kinalha-built crafted object-body with additive shaping and painted clarity
- **[SECONDARY FORMS / SUPPORTING ELEMENTS]** also obey the same built-body and painted-object logic
- **[ORNAMENTAL ZONES / DRESS / JEWELRY / SURFACE DETAILS]** become structurally attached embossed or built articulations, not only painted pattern
- **[CONTEXT / SUPPORT / ENVIRONMENT]** must support the crafted object-world rather than pulling the frame into ordinary realism

Shape logic:

keep forms stable, symbolic, built, and object-readable rather than realism-first

Volume logic:

keep the body feeling hand-shaped and corrected through additive craft intelligence rather than carved as one continuous natural mass

Paint logic:

use color to organize identity, hierarchy, and surface clarity, not to imitate realism

Space logic:

keep the world object-centered, grouped, and theme-readable rather than cinematic-perspective-dominant

Keep:

- built-body truth
- painted symbolic clarity
- ornament attached to form

- devotional/thematic gravity
- Kinhal object-world identity

Avoid:

- generic wooden toy language
- smooth molded idol reading
- plain carving with paint overlay
- lacquer-toy logic
- realism-first anatomy
- one Kinhal figure inside a non-Kinhal world

Image-to-Image

Convert this source image into the authentic visual world of **traditional Kinhal craft from Koppal, Karnataka**.

Preserve the source image's main subject count, object hierarchy, scene readability, and compositional structure, but rebuild the entire image through **Kinhal built-object grammar**. Replace generic bodies with **wood-core plus additive shaping logic**. Replace ordinary surface treatment with **built ornament and hand-painted symbolic articulation**. Replace realism-first figure behavior with **crafted devotional/thematic object readability**.

If the source image contains deities, animals, masks, stools, cradles, palanquins, vahanas, fruits, vegetables, or grouped figures, convert them so they feel like true Kinhal-made objects, not like ordinary carved or molded figures. If the source image contains setting or support context, keep it subordinate to the Kinhal object-world so the full frame still feels generated by built figures and painted symbolic order.

Retain source-memory:

- wood-core body logic
- additive shaping and correction
- embossed or built ornament
- bright painted symbolic readability
- ritual/thematic object presence
- Kinhal/Koppal/Chitragar identity

Do not turn it into generic painted folk toy art.

Do not turn it into realism with Kinhal colors.

Do not keep generic anatomy under decorative paint.

Do not let the environment become more real than the crafted object-world.

Do not let the frame stop behaving like Kinhal.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D image-world** rooted in the authentic logic of **traditional Kinhal craft from Koppal, Karnataka**. This version must remain source-rooted but may expand beyond literal craft-object documentation into a richer visual system built from **wood-core object structure, additive shaping, embossed surface articulation, bright painted symbolic fields, and devotional/thematic figure intelligence**.

The world must still feel generated from **Kinhal craft grammar**, not from generic colorful folk fantasy. Keep the body-built logic active. Keep ornament structurally attached. Keep paint as a figure-organizing force. Let forms, silhouettes, value separations, groupings, and spatial relations all begin to reorganize through Kinhal's built-object intelligence.

Use real whole-world translation logic. The style must transform not only the material but also:

- how figures are constructed
- how edges behave
- how body and ornament relate
- how light is simplified or grouped
- how space remains subordinate to object clarity
- how thematic grouping is organized
- how the environment inherits crafted logic

Allow the image to become richer, more layered, and more spatially suggestive than a literal Kinhal object study, but keep every visible form **Kinhal-born**. The expanded world should still feel made, not merely stylized.

Do not make it generic festive folk illustration.

Do not make it realism-first with Kinhal paint.

Do not let additive body logic disappear.

Do not let ornament become only pattern.

Do not let the style survive only as palette or costume.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **creative 2D + 3D translation** rooted in authentic **Kinhal craft from Koppal, Karnataka**.

Treat the style as:

- a built wooden figure-and-idol world,
- a Chitragar-made object system,

an additive body-and-surface construction language,
and a painted symbolic craft logic that can expand into a broader image-space without
losing its made-object truth.

Preserve these style-core rules:

- built-body logic remains primary
- additive shaping remains visible
- ornament remains structurally attached
- paint remains image-forming
- devotional/thematic object-world remains active
- full-frame coherence remains inside one Kinhal world

Translate the image like this:

- **[MAIN SUBJECT]** becomes a Kinhal-derived built form shaped by additive body logic and painted symbolic clarity
- **[SECONDARY SUBJECTS]** also obey the same made-object grammar
- **[ORNAMENT / DRESS / DECORATIVE ZONES]** become richer built-and-painted structural articulations
- **[ENVIRONMENT / CONTEXT / SUPPORT]** becomes a broader but still Kinhal-governed object-world rather than generic realism

Let these become richer:

- thematic grouping
- body-ornament relation
- painted field hierarchy
- silhouette clarity
- controlled 2D + 3D expansion
- full-frame Kinhal-world coherence

Keep unchanged:

- built-object truth
- additive figure construction
- paint as symbolic structure
- ritual/thematic gravity
- Kinhal/Koppal/Chitrakar identity

Avoid:

- generic colorful folk fantasy
- lacquer-toy drift
- realism-first figure design
- ornament-only styling
- decorative pattern replacing object structure
- any major element leaving the Kinhal system

Image-to-Image

Convert this source image into a **creative 2D + 3D Kinhhal translation** from Koppal, Karnataka.

Preserve the source image's main subject count, compositional hierarchy, scene order, and readability, but reconstruct all visible elements through **Kinhhal built-object grammar**. Let the image become richer and more layered than a literal toy/idol craft study, but keep it fully rooted in **wood-core construction, additive shaping, structurally attached ornament, painted symbolic clarity, and devotional/thematic object-world logic**.

If the source image contains figures, animals, ritual objects, masks, supports, or grouped thematic scenes, convert them so they feel like true Kinhhal-made objects. If the source image includes surrounding space or environment, reorganize it so the full frame feels generated by Kinhhal object-world intelligence rather than by ordinary realism.

Retain:

- built-body memory
- additive shaping
- surface ornament as structure
- paint-led figure clarity
- devotional/thematic object presence
- Kinhhal identity

Allow:

- richer layering
- stronger group-world coherence
- controlled 2D + 3D expansion
- broader object-environment integration

Do not simply recolor a normal world.

Do not make it generic painted toy fantasy.

Do not let realism dominate the crafted object-world.

Do not lose additive body logic.

Do not let the frame stop behaving like Kinhhal.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from the authentic grammar of **traditional Kinhal craft from Koppal, Karnataka**. The image must feel believable, spatial, and materially convincing, but its realism must remain fully controlled by **wood-core body logic, additive surface shaping, embossed ornament structure, painted symbolic readability, and Kinhal devotional/thematic object-world intelligence**.

Build the world from inside the craft system: the body must still feel made, not merely carved; ornament must still feel attached and built; paint must still organize symbolic identity; and the full frame must still feel as if it has been generated by **Kinh-al-made object logic** rather than by ordinary realism.

Material logic is critical. The world must still remember **wood core plus built surface**, not generic sculptural wood or molded resin. Do not turn Kinhal into realistic carved statuary or collectible figurine realism.

Shape and space logic are critical. Forms must remain **crafted, stable, emblematic, and object-readable** even as the world gains dimensionality. Space must still serve the object-world. Environment, supports, groups, and staging must all feel like extensions of Kinhal craft intelligence.

Light and value logic are critical. Lighting must strengthen **painted symbolic clarity and body/ornament separation**, not dissolve them into generic realism. Values should preserve figure hierarchy and crafted readability rather than cinematic naturalism.

Do not make it a realistic world with Kinhal-painted props.

Do not make it polished figurine realism.

Do not let object-world gravity collapse into cute toy logic.

Do not let environment overpower the built figure.

Do not allow any major element to belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **full 3D realistic dimensional world** generated from authentic **Kinh-al craft from Koppal, Karnataka**.

Treat the style as:

a built wooden figure-and-idol world,

a Chitrakar-made object system,

an additive construction-and-ornament language,

and a believable reality whose shape, volume, light, and space are still controlled by Kinhal craft logic.

Style system that must remain unchanged:

- wood-core plus additive-build identity
- ornament attached to structure

- paint as symbolic image-forming force
- devotional/thematic object-world reading
- Kinhai/Koppal/Chitragar grounding
- full-frame coherence inside one Kinhai world

Translate the scene like this:

- **[MAIN SUBJECT]** becomes a fully dimensional Kinhai-derived built form whose structure remains craft-born
- **[SECONDARY SUBJECTS]** become dimensional but still obey the same additive built-object logic
- **[ORNAMENT / DRESS / SURFACE ZONES / SUPPORTS]** become tactile Kinhai-world elements
- **[ENVIRONMENT]** becomes a believable spatial field organized by object clarity, thematic grouping, and crafted world logic

Increase:

- believable volume
- material depth
- light on built surfaces
- spatial completion
- full-frame coherence
- dimensional Kinhai-world realism

Do not lose:

- built-body truth
- additive shaping memory
- structurally attached ornament
- paint-led symbolic clarity
- ritual/thematic gravity
- Kinhai identity

Avoid:

- generic realistic toy world
- sculptural naturalism
- lacquer-toy logic
- decorative color added later
- cinematic environment dominating the craft system
- any non-Kinhai system taking over the frame

Image-to-Image

Convert this source image into a **full 3D realistic Kinhai world** from Koppal, Karnataka.

Preserve the source image's main subject count, object hierarchy, compositional structure, and readability, but rebuild the entire image through **Kinhal built-object grammar**. Convert ordinary bodies into **wood-core plus additive shaped figures**. Convert ordinary decoration into **structurally attached ornament**. Convert ordinary figure reading into **paint-led symbolic clarity**. Convert generic spatial logic into a dimensional world still controlled by Kinhal object-world physics.

If the source image contains deities, animals, ritual objects, masks, cradles, stools, palanquins, vahanas, or grouped thematic scenes, transform them into Kinhal-derived forms that still feel constructed and painted in the real craft sense. If the source image includes support context or environment, rebuild it so the full frame feels born from a coherent Kinhal world rather than from normal realism.

Retain:

- wood-core build memory
- additive shaping
- ornament as structure
- painted symbolic readability
- devotional/thematic object presence
- Kinhal/Koppal/Chitrakar identity

Increase:

- dimensional realism
- material depth
- spatial completion
- group-world coherence
- full-frame Kinhal integration

Do not paste Kinhal colors over a normal scene.

Do not turn it into generic painted toy realism.

Do not let realism erase built-body logic.

Do not let environment overpower object-world reading.

Do not allow one major element to remain outside the Kinhal system.
