

Kolhapur jewellery - Maharashtra

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual grammar of the Kolhapur regional jewellery-metal ecosystem of Maharashtra, grounded in construction-led small-object ornament culture rather than generic silver accessory styling. Do not treat this as generic silver jewellery, oxidized-metal fashion, boho accessory design, or random metallic craft styling. Build the entire image as if it is generated by a Kolhapur body-object world where linked articulation, small-unit assembly, clasp logic, hanging balance, body-zone placement, and finish-aware precision control every decision.

The image must obey this branch logic:

- small-object metal construction remains primary
- loops, links, rings, pendants, ghungroos, clasps, and articulated units behave as engineered components
- body zones such as ankle, wrist, waist, neck, ear, and close-body placement remain central
- finish supports structure, whether polished, oxidized, or plated
- ornament is assembly-driven, not mood-driven
- the whole system reads as regional metal-body-object culture, not generic accessories

Translate the full world through this branch:

- shape must become linked, looped, hung, clasped, and articulated
- form must become small-object precise rather than generic metal volume
- space must become body-near and object-near rather than scenic
- light must reveal finish, relief, edge, and linkage
- shadow must support articulation and separation
- movement must feel like swing, jingle, hang, and balance
- environment must inherit assembly-first logic, finish-aware reflectivity, and ornament-scale hierarchy

Avoid:

generic silver fashion styling, oxidized accessory mood, boho jewellery worlds, metallic texture-only conversion, generic realism with regional jewellery added later.

The final result must feel like a true Kolhapur jewellery-metal world: articulated, wearable, close-range, assembly-led, and regionally grounded.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of the Kolhapur jewellery-metal ecosystem of Maharashtra.

Core style system to preserve:

- small-object metal construction
- linked articulation and unit assembly
- body-zone placement logic
- clasp, loop, ring, and hanging balance intelligence
- finish-aware reflectivity secondary to structure
- close-range ornament precision
- full-world consistency under regional jewellery-metal logic

Translate the scene like this:

- [MAIN SUBJECT] becomes organized by linked metal articulation and body-object relation
- [SECONDARY SUBJECTS] obey the same assembly-first logic
- [OBJECTS / PROPS] become ringed, looped, clasped, hung, or articulated rather than generic
- [ENVIRONMENT] becomes a world of close-range precision, linked balance, and controlled reflectivity
- [LIGHT / SHADOW] reveal finish, relief, and unit separation
- [MOVEMENT / ACTION] become swing, jingle, hanging balance, and link articulation

Keep:

construction-led identity, body-zone logic, linked precision, finish-aware control, regional recognizability.

Avoid:

generic silver jewellery styling, oxidized fashion mood, metallic glamour, texture-only conversion, only the jewellery translated while the rest stays generic.

The final result must feel like the whole world was generated by Kolhapur jewellery-metal logic.

Image-to-Image

Convert this source image into an authentic Kolhapur jewellery-metal world from Maharashtra.

Preserve the source image's subject count, core action, and readability, but rebuild the entire image through regional metal-body-object logic. Do not simply add silver tone, oxidized finish, or ornamental motifs. Reconstruct shape, form, spacing, articulation, light, movement, and environment so that the whole world behaves like a linked jewellery-metal ecosystem.

The transformed image must become:

- assembly-led rather than mood-led
- body-near rather than scenic
- articulated rather than generic

- finish-aware but structure-first
- unified across ornament, object, and environment

Do not let only the jewellery carry the style.

Do not let finish replace construction.

Do not leave the rest of the frame generic.

The final result must feel like the source image has been rebuilt by Kolhapur jewellery-metal logic, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D visual world rooted in the Kolhapur jewellery-metal ecosystem of Maharashtra. This must not become generic silver fantasy, oxidized-boho styling, or ordinary realism with regional jewellery added later. It should feel like authentic assembly-first metal-body-object logic has expanded into a broader stylized world while remaining fully controlled by linked articulation, body-zone order, and finish-aware precision.

Keep the deep structure unchanged:

- small-unit construction remains primary
- linked articulation remains visible
- body-near ornament logic remains central
- finish remains secondary to structure
- the whole frame obeys regional jewellery-metal organization

Now let the world become richer:

- loops, links, and hanging units can shape larger visual rhythms
- body-zone logic can spread into broader spatial organization
- finish contrast can become more active without becoming mood-first
- movement can become more visibly articulated while staying assembly-led
- object clusters can generate a richer 2D + 3D environment

Translate everything:

shape, form, space, light, shadow, movement, hierarchy, and environment must all be rebuilt through articulated jewellery-metal logic.

Avoid:

generic silver fantasy, boho styling, oxidized fashion worlds, metallic decorative surfaces, generic accessory illustration, only the jewellery translated.

The final result must feel like Kolhapur jewellery-metal logic has generated a larger stylized world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the Kolhapur jewellery-metal ecosystem of Maharashtra.

Preserve these style-core rules:

- assembly-first construction
- linked articulation remains visible
- body-zone logic remains central
- finish stays subordinate to structure
- close-range precision remains active
- the whole frame obeys one regional jewellery-metal system

Translate the scene like this:

- [MAIN SUBJECT] becomes shaped by linked metal articulation and body-object balance
- [SECONDARY SUBJECTS] obey the same assembly logic
- [OBJECTS / PROPS] become looped, clasped, hung, ringed, or clustered in logic
- [ENVIRONMENT] becomes a richer but still close-range articulated world
- [LIGHT / SHADOW] become more expressive while staying relief-revealing
- [MOVEMENT] becomes visibly articulated swing, jingle, and balance rather than generic action

Keep:

construction-led identity, linked precision, finish-aware reflectivity, body-object relation, regional recognizability.

Avoid:

silver fantasy worlds, oxidized fashion styling, metallic mood-only conversion, generic realism with jewellery details added.

The final result must feel like the world was redesigned by Kolhapur jewellery-metal logic.

Image-to-Image

Convert this source image into a creative 2D + 3D Kolhapur jewellery-metal world from Maharashtra.

Preserve the source image's main action, relationships, and readability, but reconstruct the entire image through linked metal-body-object logic. Do not stop at adding silver finish or oxidized surface character. Rebuild shape, form, spacing, articulation, light, shadow, movement, and environment so the image behaves like an expanded jewellery-metal ecosystem.

The transformed image must become:

- assembly-driven
- articulated
- body-near in logic
- finish-aware but structure-first
- unified across subject, object, and environment

Do not allow only the ornament to become Kolhapuri.

Do not let finish replace articulation.

Do not let the world remain generic.

The final result must feel like Kolhapur jewellery-metal logic has expanded into a living stylized world.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the Kolhapur jewellery-metal ecosystem of Maharashtra. This must not become ordinary realism with silver jewellery inserted later. It must feel like the whole world has become real under regional articulated metal-body-object law: linked units, body-zone placement, hanging balance, clasp logic, finish-aware reflectivity, and small-object precision controlling everything.

Translate the full branch into dimensional reality:

- shape must remain looped, linked, clasped, hung, and articulated
- form must remain small-object precise rather than generic metal mass
- space must remain body-near and object-near in logic
- light must reveal edge, relief, polish, oxidation, and separation
- shadow must support articulation and hanging hierarchy
- movement must feel like believable swing, jingle, and balance
- environment must inherit assembly-first and reflectivity-aware organization

Keep realism under branch control:

believable metal weight, convincing hang, precise link articulation, controlled finish behavior, and object-scale hierarchy without drifting into generic metallic styling.

Avoid:

generic realistic jewellery styling, oxidized accessory mood, silver fantasy realism, only the ornament translated, metallic surface spectacle replacing construction.

The final result must feel like Kolhapur jewellery-metal logic itself became dimensional reality.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the Kolhapur jewellery-metal ecosystem of Maharashtra.

Style system that must remain unchanged:

- assembly-first logic
- linked articulation
- body-zone placement
- small-object precision
- finish-aware reflectivity
- full-world consistency under regional jewellery-metal grammar

Translate the scene like this:

- [MAIN SUBJECT] becomes a dimensional articulated metal-body-object presence
- [SECONDARY SUBJECTS] obey the same linked logic
- [OBJECTS / PROPS] become clasped, hung, ringed, or linked in construction
- [ENVIRONMENT] becomes a believable world organized by assembly, reflectivity, and body-near logic
- [LIGHT / SHADOW] become realistic but articulation-revealing
- [MOVEMENT / PHYSICS] become believable hanging balance and swing rather than generic motion

Increase:

metal weight realism, link articulation, relief, finish control, environmental completion.

Do not lose:

construction-led identity, body-object logic, linked precision, regional recognizability.

Avoid:

generic realistic silver styling, accessory glamour, oxidized mood worlds, only the jewellery translated.

The final result must feel like a real Kolhapur jewellery-metal world.

Image-to-Image

Convert this source image into a full 3D realistic Kolhapur jewellery-metal world from Maharashtra.

Preserve the source image's subject count, action, and readability, but rebuild the full image through regional articulated metal-body-object logic. Do not simply add realistic silver jewellery or oxidized finish. Reconstruct shape, form, spacing, articulation, movement, light, shadow, and environment so the entire scene behaves like a dimensional jewellery-metal ecosystem.

The transformed image must become:

- assembly-led
- linked and articulated
- body-zone aware
- finish-controlled
- unified across subject, object, and environment

Do not let realism erase the branch.

Do not let finish replace link logic.

Do not leave the rest of the world generic.

The final result must feel like Kolhapur jewellery-metal logic itself has become real.
