

Opaque Wrap - Manipur

V1 — Authentic Style

Universal Hard Prompt

Create an image built from the native visual logic of a **Manipuri opaque lower-wrap field system**, where the governing force is **grounded wrap stability, stripe or band order, contained field authority, lower-body anchoring, and socially structured cloth logic**. Do not treat this as generic striped fabric, skirt design, blanket pattern, or ethnic fashion cloth. Build the full image as if it comes from a world where cloth organizes reality through **held bands, wrapped containment, grounded weight, and stable lower-field order**.

Use a visual system where figures are shaped by wrap logic rather than realism-first anatomy. Lower-body structure must feel anchored, contained, and field-defined. Faces and upper bodies must still obey the same social order rather than floating above generic realism. Props, animals, ground, architecture, trees, and horizon must all inherit a sense of **banded structure, sectional containment, grounded division, and wrapped order**. The image must feel like a **lower-wrap stripe-field system** generated the entire scene.

No generic striped garment styling, no blanket aesthetics, no broad “tribal stripe” mood, no realism-first bodies with one patterned lower cloth added later.

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** using the native visual logic of a **Manipuri opaque lower-wrap stripe-field system**.

Core style system to preserve:

- grounded wrap-field identity
- stripe or band order
- opaque field authority
- lower-body anchoring
- contained structural division
- social cloth-order
- whole-frame consistency so every visible element belongs to one wrap-field world

Translate the scene like this:

- **[MAIN FIGURE]** becomes a grounded wrap-structured presence defined by lower-field containment and stable band order

- **[SECONDARY FIGURES]** also obey the same held cloth-world logic
- **[OBJECTS / PROPS]** become sectioned, band-aware, grounded forms
- **[TREES / GROUND / ARCHITECTURE / ENVIRONMENT]** become stable, contained, stripe- or band-aware spatial elements organized by wrap-field order
- **[DEPTH / HORIZON]** becomes grounded and held rather than airy or open

Keep:

- wrap stability
- opacity
- stripe/band discipline
- lower-body anchoring
- structured containment
- whole-frame groundedness

Avoid:

- generic striped textile
- skirt fashion logic
- all-over patterning
- decorative ethnic striping
- generic environment under one wrapped garment

Image-to-Image

Convert this source image into the native visual world of a **Manipuri opaque lower-wrap stripe-field system**.

Preserve the source image's subject count, basic action, and readable scene structure, but rebuild the full frame through **grounded wrap-field logic**. Replace generic fabric behavior with held opaque structural cloth. Replace decorative patterning with true stripe or band order. Replace realism-first body reading with lower-body anchoring and contained field logic. Replace ordinary environment with a world shaped by stable sections, grounded divisions, and cloth-born structural containment.

Do not only add striped wrap cloth to the figure. Do not keep the environment generic. Do not turn it into decorative textile styling. Rebuild the whole frame as if a grounded lower-wrap field system invented it.

V2 — Artisan Translation

Universal Hard Prompt

Create a dimensional image-world rooted in the authentic logic of a **Manipuri opaque lower-wrap stripe-field system**, where grounded cloth containment, lower-body structure, band rhythm, and sectional stability remain primary, but the scene gains richer spatial depth and more articulated dimensional presence. This must not become fashion realism or graphic stripe design. It must still feel generated by **wrap-field intelligence**.

Keep the branch source-rooted: opacity must remain structural, not just material. Stripe or band order must remain organizing logic, not surface decoration. Figures must remain grounded by cloth containment. Space must expand through structural sections, thresholds, and weighted divisions rather than through generic realism. Trees, props, ground, architecture, and background must all inherit the same held banded order. Let the image become richer and more dimensional, but keep it **wrap-structured first**.

No editorial ethnic styling, no decorative stripe fantasy, no blanket logic, no realism-first environment with a patterned lower garment.

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** as an authentic dimensional translation rooted in a **Manipuri opaque lower-wrap stripe-field system**.

Preserve these style-core rules:

- grounded wrap identity remains primary
- opacity remains structural
- stripes or bands remain organizing forces
- lower-body field logic remains active
- space remains contained and stable
- whole-frame branch purity remains intact

Translate the image like this:

- **[MAIN FIGURE]** becomes a dimensional but still wrap-grounded presence
- **[SECONDARY FIGURES]** become supporting forms held by the same structural field order
- **[OBJECTS / PROPS]** become band-aware and sectionally organized
- **[ENVIRONMENT]** becomes a broader but still grounded wrap-field world shaped by structural divisions, stable rhythm, and contained depth
- **[GROUND / HORIZON / DISTANCE]** becomes weight-bearing and cloth-order aware

Let these become richer:

- spatial structure
- grounded depth

- figure-environment relation
- structural band extension
- wrap-born world coherence

Keep unchanged:

- lower-body anchoring
- stripe/band discipline
- opacity
- structural containment
- whole-frame grounded logic

Avoid:

- graphic stripe art
- fashion realism
- decorative ethnic bands
- costume-only translation
- generic environment with one branch-coded garment

Image-to-Image

Convert this source image into an authentic dimensional **Manipuri opaque wrap-field translation**.

Preserve the source image's main action, pose relationships, and readable staging, but reconstruct all visible elements through **grounded lower-wrap stripe-field logic**. Turn figures into wrap-structured presences. Turn environment into a field of held sections, stable thresholds, and band-informed order. Turn props, animals, architecture, and terrain into elements controlled by the same grounded stripe-field intelligence. The image may become more dimensional, but it must still feel built by cloth-anchored structure, not realism with patterned textile added later.

Do not only pattern the lower garment. Do not keep realism underneath. Do not use stripes as decoration only. Rebuild the whole world as if it were generated by an opaque wrap-field system.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a premium, fully orchestrated, depth-rich image-world generated from the authentic grammar of a **Manipuri opaque lower-wrap stripe-field system**. The result must feel highly finished, highly readable, and spatially complete, but still fully governed by **grounded wrap containment, stripe or band hierarchy, lower-body anchoring, opaque field authority, and structured social cloth order**. Premium here must not become fashion realism or luxury ethnic styling. It must remain wrap-born.

Use strong focal hierarchy, deliberate figure-ground separation, stable weighted composition, and complete environment orchestration, but keep every visual zone under the same wrap-field system. Figures must remain grounded and structurally held. Props and animals must become sectionally organized symbolic forms. Ground, trees, architecture, and atmosphere must all feel shaped by cloth-born stability and band logic. The world must feel like a **premium final image built by a lower-wrap field system**, not a cinematic realism scene with patterned clothing.

No editorial textile glamour, no luxury ethnic stripe mood, no generic cinematic world with one branch-coded garment, no surface-only pattern richness.

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** as a premium orchestrated cinematic translation of a **Manipuri opaque lower-wrap stripe-field system**.

Style system that must remain unchanged:

- grounded wrap-field identity
- opaque structural containment
- stripe/band hierarchy
- lower-body anchoring
- sectioned world-order
- whole-frame branch ownership

Translate the scene like this:

- **[MAIN FIGURE]** becomes a premium, highly readable, grounded wrap-structured presence
- **[SECONDARY FIGURES]** become supporting forms shaped by the same contained cloth logic
- **[OBJECTS / PROPS / ANIMALS]** become structured, band-aware, grounded elements
- **[ENVIRONMENT / GROUND / ARCHITECTURE / SKY]** becomes a complete but still held, stable, sectioned world
- **[DEPTH / ATMOSPHERE]** becomes weight-bearing and controlled rather than airy or loose

Increase:

- focal hierarchy
- compositional stability
- figure-ground separation
- environmental completion
- premium finish under branch control

Do not lose:

- grounded wrap logic
- opacity
- stripe/band order
- lower-body containment
- whole-frame structural coherence

Avoid:

- fashion realism
- luxury ethnic styling
- decorative stripes
- costume-only translation
- any generic zone outside the branch

Image-to-Image

Convert this source image into a premium cinematic **Manipuri opaque wrap-field world**.

Preserve the source image's main subject count, action, and dominant staging relationships, but rebuild the entire frame through **grounded stripe-field cloth intelligence**. Figures must become wrap-structured and weight-bearing. Objects, animals, and architecture must become sectioned and controlled. Environment must become stable, grounded, and band-aware. The result should feel premium and complete, but it must still feel born from lower-wrap field order rather than from realism with patterned textiles.

Do not only upgrade the cloth. Do not upscale a generic scene. Do not let premium finish erase the branch. Rebuild the full world as if it were generated by grounded opaque wrap-field logic.
