

Tattoo, hair, feather augmentation - Nagaland

V1 — Authentic Style

Universal Hard Prompt

Create an image built from the authentic tattoo / hair / feather augmentation world of Nagaland. Do not treat this as generic tribal tattoos, feather styling, body-paint fashion, or a normal world with body details added later. Build the entire image as if it is generated by a body-transformation system where the body itself is the sign field: tattoos, hair augmentation, feather extension, tribe-/sex-specific placement, and socially coded surface change control every decision.

The image must obey this branch law:

- the world is generated from body transformation, not accessory styling
- the body itself must become marked, extended, projected, and socially coded
- tattoos, hair, and feathers must feel placed, rule-bound, and meaningful rather than random
- surface and outline change must remain primary
- body-zone specificity must remain visible
- the result must feel like living body-surface law rather than decoration

Translate the full world through this augmentation system:

- shape must become marked, projected, extended, inscribed, and body-led
- form must become transformed-body form rather than object-addition form
- space must become skin-space, outline-space, and body-surface space rather than ordinary scenic space
- light must reveal tattoos, hair fibers, feather structure, projected outlines, and coded body zones
- shadow must support surface relief and augmentation without turning the scene into fashion styling
- value must remain organized by marked vs unmarked surfaces and projected body presence
- movement must feel like augmented-body motion: fixed skin marks, shifting hair, feather response, and transformed outline behavior
- environment must also obey augmented-surface law: characters, animals, props, architecture, mountains, trees, ground, and atmosphere must all feel marked, inscribed, projected, or surface-coded rather than generic

Keep the branch source-rooted:

body-as-field law, tattoo placement, hair/feather augmentation, tribe-/sex-specific differentiation, and socially coded body-surface readability.

Avoid:

generic tribal tattoo aesthetics, feather costume styling, body-paint fashion, accessory thinking, and ordinary realism with body details added.

The final result must feel like a true Nagaland tattoo / hair / feather world: marked, augmented, body-led, socially coded, and fully translated across the whole frame.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of a tattoo / hair / feather augmentation world from Nagaland.

Core style system to preserve:

- body-as-field coding
- non-object body transformation
- tribe-/sex-specific placement logic
- surface and outline alteration
- projected augmentation
- socially readable body zones
- whole-frame coherence under augmented-surface law

Translate the scene like this:

- [MAIN SUBJECT] becomes governed by marked body surface and projected augmentation rather than generic realism
- [SECONDARY SUBJECTS] obey the same body-transformation law
- [OBJECTS / PROPS] become inscribed, projected, surface-coded, or outline-altered rather than decorative
- [ANIMALS / TREES / LANDSCAPE / ARCHITECTURE] become shaped by markings, projections, surface codes, and transformed outlines
- [ENVIRONMENT / BACKGROUND] becomes a world of inscribed surfaces, projected edges, and visible social body coding
- [LIGHT / SHADOW] preserve body-surface readability rather than fashion styling
- [SPACE / DEPTH] become surface-field space and outline-space rather than ordinary scenic depth
- [MOVEMENT / ACTION] become augmented-body motion, hair/feather response, and socially coded surface continuity

Keep:

body-as-field logic, placement specificity, surface transformation, projected outline, social readability.

Avoid:

generic tattoos, feather styling, body-paint aesthetics, random surface detail, and ordinary realism with body decorations added.

The final result must feel like the whole world was generated by Nagaland augmented-surface law.

Image-to-Image

Convert this source image into an authentic Nagaland tattoo / hair / feather augmentation world.

Preserve the source image's subject count, core action, main relationships, and readable scene meaning, but rebuild the entire image through body-transformation logic. Do not simply add tattoos, feathers, or hair ornaments. Reconstruct all visible forms so that shape, form, light, shadow, value, movement, and environment obey augmented-surface law.

The transformed image must become:

- body-transformed rather than accessorized
- surface-coded rather than merely decorated
- placement-governed rather than random
- socially specific rather than generically tribal
- outline-altered rather than fashion-styled
- unified across figures, animals, props, architecture, terrain, and background

Do not let only the tattoos or feathers become branch-correct while the rest of the frame stays generic.

Do not let surface detail replace body-law.

Do not let realism overpower augmented-surface order.

The final result must feel like the source image has been rebuilt by a Nagaland body-transformation civilization, not decorated with styling details.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image world rooted in the tattoo / hair / feather augmentation grammar of Nagaland. This must not become generic tribal-tattoo fantasy, feather costume design, or a normal stylized world with marked bodies. It should feel like authentic body-transformation logic has expanded into a broader world where characters, animals, architecture, mountains, props, and environment are all rebuilt through inscribed surfaces, projected outlines, and socially coded augmentation.

Keep the deep structure unchanged:

- body-as-field law remains primary
- placement specificity remains structural
- surface transformation remains central
- projected augmentation remains visible
- tribe-/sex-specific social coding remains source-rooted
- the whole frame remains generated by augmented-surface law

Now let the world become richer:

- characters can be built from marked skin-fields, projected outline extensions, and coded body zones
- animals can inherit inscribed surfaces and augmented silhouettes
- architecture can behave like marked skins, projected crests, feathered or fibrous surface extensions, and coded facades
- mountains, trees, ground, and sky can become organized by surface inscription, projection, and outline transformation
- shadows can deepen through relief, projection, and marked contrast
- space can become a world of coded surfaces and altered outlines rather than ordinary landscape

Translate everything:

color, shape, line, form, light, shadow, volume, depth, character, animal, object, architecture, environment, and total scene behavior must all be rebuilt through augmented-surface grammar.

Avoid:

generic tattoo fantasy, feather-costume styling, body-paint worlds, decorative markings, and ordinary stylized scenes with body details added.

The final result must feel like the Nagaland tattoo / hair / feather branch itself has generated an imaginative unified 2D + 3D world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the tattoo / hair / feather augmentation world of Nagaland.

Preserve these style-core rules:

- body-as-field law remains primary
- placement specificity remains structural
- surface transformation remains visible
- projected augmentation remains central
- socially coded body zones remain source-rooted
- the whole frame remains generated by augmented-surface law

Translate the scene like this:

- [MAIN SUBJECT] becomes a figure built from inscribed body-fields and projected augmentation rather than generic realism
- [SECONDARY SUBJECTS] obey the same body-transformation law
- [ANIMALS / OBJECTS / PROPS] become generated by coded surfaces, marked zones, and projected outline changes
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become organized by inscription, augmentation, projections, and transformed surfaces
- [ENVIRONMENT] becomes a world of coded skins and altered outlines

- [LIGHT / SHADOW] reveal marks, relief, fibers, feathers, and projected edges
- [SPACE / DEPTH] become surface-field space rather than ordinary scenic depth
- [MOVEMENT / ACTION] become augmented-body motion, projected response, and transformed-surface interaction

Keep:

body-transformation law, placement specificity, surface coding, projected outline, social readability.

Avoid:

generic tattoo fantasy, feather styling, body-paint aesthetics, decorative markings, and ordinary stylized worlds with body details.

The final result must feel like the world was redesigned by Nagaland augmented-surface intelligence.

Image-to-Image

Convert this source image into a creative 2D + 3D Nagaland tattoo / hair / feather augmentation world.

Preserve the source image's core action, readable relationships, and main scene meaning, but rebuild every visible element through body-transformation logic. Do not stop at adding tattoos, feathers, or hair details. Reconstruct shape, form, light, shadow, volume, depth, character design, environment, and spatial behavior so the whole image behaves like a world generated by augmented-surface law.

The transformed image must become:

- body-transformed rather than body-decorated
- inscribed rather than accessorized
- placement-governed rather than randomly marked
- outline-altered rather than fashion-styled
- unified across people, animals, props, architecture, terrain, and background

Do not let only selected marks or augmentations become branch-correct.

Do not let the environment remain generic.

Do not let visible surface detail replace whole-world augmentation law.

The final result must feel like the Nagaland tattoo / hair / feather branch has expanded into a full imaginative world-state.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the tattoo / hair / feather augmentation grammar of Nagaland. This must not become ordinary realism with tattoos, feathers, or hair additions added later. It must feel like the entire world has become real under body-transformation law: inscribed surfaces, projected augmentation, socially coded placement, and altered body outlines controlling every visible element.

Translate the full style into dimensional reality:

- shape must remain marked, projected, body-led, and socially placed
- form must remain transformed-body-governed rather than styling-realism-governed
- color must remain under surface-coding law rather than decorative taste
- light must reveal skin marks, fibers, feather structures, projected edges, and coded body zones
- shadow must support relief, projection, and surface transformation without turning the scene into fashion realism
- volume must behave like real augmented-body form and surface-generated world structure
- depth must be built through inscribed fields, projected outlines, and surface-law rather than generic scenic realism
- characters, animals, props, architecture, terrain, and all environmental structures must feel generated through augmented-surface law, not merely styled by it

Keep realism under branch control:

believable skin marking, real hair/feather response, visible placement logic, altered outlines, and total body-transformation coherence.

Avoid:

ordinary realism with tattoos, feather costume realism, body-fashion styling, generic tribal tattoo worlds, and prop-only augmentation accents.

The final result must feel like the Nagaland tattoo / hair / feather branch itself has become a believable living world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the tattoo / hair / feather augmentation grammar of Nagaland.

Style system that must remain unchanged:

- body-as-field law
- placement specificity
- surface transformation
- projected augmentation
- socially coded body zones

- whole-frame augmented-surface coherence

Translate the scene like this:

- [MAIN SUBJECT] becomes a fully dimensional figure built from inscribed body-fields and projected augmentation
- [SECONDARY SUBJECTS] obey the same transformed-body law
- [ANIMALS / OBJECTS / PROPS] become believable forms generated by coded surfaces, projected edges, and marked zones
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become real spatial forms organized by inscription, projection, and altered surface logic
- [LIGHT / SHADOW] become realistic but still augmented-surface-revealing
- [SPACE / DEPTH] become believable surface-field space rather than generic realism-space
- [MOVEMENT / PHYSICS] become real augmented-body motion, projected response, and transformed-surface interaction

Increase:

surface realism, placement clarity, projection depth, skin-mark readability, world completion, augmented-surface coherence.

Do not lose:

body-transformation law, placement specificity, projected outline, social readability, branch purity.

Avoid:

normal realism with tattoos, feather costume realism, body-fashion worlds, and ordinary scenes with marked body details.

The final result must feel like a real Nagaland tattoo / hair / feather world.

Image-to-Image

Convert this source image into a full 3D realistic Nagaland tattoo / hair / feather augmentation world.

Preserve the source image's subject count, readable action, and main relationships, but rebuild all visible forms through body-transformation logic. Replace ordinary realism with inscribed surfaces, projected augmentation, socially coded placement, and augmented-surface world behavior.

The transformed image must become:

- body-transformed rather than body-decorated
- inscribed rather than accessorized
- socially placed rather than random
- real in volume but still controlled by augmented-surface law
- unified across figures, animals, props, architecture, terrain, and environment

Do not let only selected tattoos, feathers, or hair additions become branch-correct.
Do not let realism take over.
Do not leave the rest of the world generic.

The final result must feel like the Nagaland tattoo / hair / feather world has become believable reality.
