

Wangkhei Phee - Manipur

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of **traditional Wangkhei Phee from Manipur**. Build the image as if it comes from a real **Meitei woven wrapper/textile world** from **Wangkhei**, with a **very delicate muslin-like cotton body**, **extra-weft woven motifs placed at wide intervals across the field**, and a **dominant border design** built through **odd-numbered stepped geometry**. The image must read first as **Wangkhei Phee**, not as generic Manipuri weaving, not as plain muslin with trim, not as printed border cloth, not as embroidered geometric fabric, and not as fashion styling with a traditional border added later.

Use real weave logic. The motifs and borders must feel **woven into the cloth structure** through **extra-weft technique**, not printed, painted, embroidered, appliquéd, or pasted on afterward. The body field and border field must feel structurally related but visually different, as if woven with deliberate technical control.

Use real whole-world translation logic. Do not only change fabric texture or border pattern. Rebuild **shape logic, field hierarchy, silhouette behavior, spacing, light grouping, value separation, edge discipline, and cloth-world physics** through Wangkhei Phee grammar. The whole image must feel generated by **delicate woven order**, not by ordinary garment realism.

Use real body-field logic. The body must remain **light, airy, and interval-based**. It should not become dense, overloaded, or all-over patterned. Preserve the feeling of restrained motif placement across a delicate field.

Use real border logic. The border must remain the **main identity-bearing zone**. It should feel stronger than the body, but still belong to the same woven system. Keep the stepped pattern counted and disciplined, not casually geometric.

Use real garment logic. The textile must still feel like it belongs to **Meitei ceremonial wrapper/garment culture**, not abstract fabric design.

Do not make it generic handloom.

Do not make it dense patterned cloth.

Do not make it printed geometry.

Do not make it embroidery-like border decoration.

Do not let any major element belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / TEXTILE WORLD]** in the authentic visual logic of traditional Wangkhei Phee from Manipur.

Treat the style as:

a **delicate Meitei woven wrapper/textile**,
a **Wangkhei-origin border-and-body system**,
an **extra-weft motif language**,
and a cloth-world where **wide-interval body motifs** and **odd-step border geometry** work together as one structured woven identity.

Core style system to preserve:

- delicate muslin-like body-field identity
- extra-weft woven construction memory
- wide-interval body motif placement
- strong border emphasis
- odd-step geometric discipline
- Meitei ceremonial garment-world reading
- full-frame consistency so every visible element belongs to one Wangkhei Phee world

Translate the image like this:

- **[MAIN SUBJECT / MAIN FORM]** becomes a Wangkhei Phee-derived woven field organized by airy body spacing and strong border authority
- **[SECONDARY FORMS / SUPPORTING ELEMENTS]** also obey the same delicate woven hierarchy
- **[BODY FIELD / INTERVAL MOTIFS / SURFACE AREAS]** become restrained, spaced, and muslin-light rather than densely decorated
- **[BORDER / EDGE / LONGITUDINAL ZONES]** become odd-step woven identity fields rather than decorative trims
- **[GARMENT / CONTEXT / ENVIRONMENT]** must support the woven wrapper-world rather than pull the frame into ordinary realism

Shape logic:

keep forms airy, counted, woven, and hierarchically organized rather than graphic or print-like

Field logic:

keep body open and restrained, border strong and identity-bearing

Light/value logic:

support delicacy, transparency/airiness, and woven readability rather than generic fashion lighting

Meaning logic:

keep Meitei ceremonial-wrapper dignity and Wangkhei place-memory stronger than decorative styling

Keep:

- delicate woven field
- extra-weft identity
- wide-interval motifs
- odd-step border discipline
- Meitei garment-world logic

Avoid:

- generic handloom styling
- all-over patterned fabric
- print-like borders
- embroidery-like surface behavior
- heavy cloth physics
- one Wangkhei border inside a non-Wangkhei world.

Image-to-Image

Convert this source image into the authentic visual world of **traditional Wangkhei Phee from Manipur**.

Preserve the source image's main subject count, textile hierarchy, field order, and readability, but rebuild the entire image through **Wangkhei Phee woven body-and-border grammar**. Replace generic cloth behavior with a **delicate muslin-like woven field**. Replace ordinary patterning with **extra-weft interval motifs**. Replace generic edging with a **strong odd-step woven border system**. Replace dense or print-like decoration with **airy spaced body motifs and border-led identity**.

If the source image contains garments, draped cloth, body fields, edge zones, or textile panels, convert them so they feel like real Wangkhei Phee structures rather than standard fabrics with traditional styling. If the source image contains context or environment, keep it subordinate to the woven wrapper-world so the full frame still behaves like a delicate ceremonial textile system.

Retain source-memory:

- muslin-like delicacy
- extra-weft woven logic
- wide-interval body motifs
- border dominance
- odd-step geometric order
- Meitei ceremonial garment identity

Do not turn it into generic Manipuri handloom.

Do not turn it into plain muslin with a border.

Do not turn it into printed or embroidered geometry.

Do not let the motif lose woven structural authority.
Do not let the frame stop behaving like Wangkhei Phee.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D image-world** rooted in the authentic logic of **traditional Wangkhei Phee from Manipur**. This version must remain source-rooted but may expand beyond literal cloth documentation into a richer visual system built from **delicate muslin-like openness, extra-weft woven motif logic, wide-interval body patterning, strong border hierarchy, and odd-step geometric discipline**.

The world must still feel generated from **Wangkhei Phee weaving intelligence**, not from generic textile fantasy. Keep the body field light and breathable. Keep the border structurally dominant. Keep motifs woven, not applied. Let shape, spacing, edge behavior, and field transitions all begin to reorganize through **airy woven order** rather than realism-first garment styling.

Use real whole-world translation logic. The style must transform not only motif appearance but also:

- how fields breathe
- how edges hold
- how the body stays open
- how the border organizes identity
- how space grows from cloth logic
- how value supports delicacy
- how environment inherits woven restraint

Allow the image to become richer and more layered than a literal wrapper study, but keep every visible form **Wangkhei-born**.

Do not make it generic handloom fantasy.

Do not make it dense textile illustration.

Do not let extra-weft logic disappear.

Do not let the border become trim only.

Do not let the style survive only as soft muslin plus geometric edging.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **creative 2D + 3D translation** rooted in authentic **Wangkhei Phee from Manipur**.

Treat the style as:

a **delicate Meitei woven wrapper/textile**,
a **Wangkhei body-and-border hierarchy**,
an **extra-weft motif language**,
and a cloth-world that can expand into a broader image-space without losing its airy woven discipline.

Preserve these style-core rules:

- muslin-like delicacy remains primary
- extra-weft structure remains active
- body motifs remain widely spaced
- border authority remains strong
- odd-step order remains disciplined
- ceremonial Meitei wrapper identity remains present
- full-frame coherence remains inside one Wangkhei Phee world

Translate the image like this:

- **[MAIN SUBJECT]** becomes a Wangkhei Phee-derived woven field or form organized by airy spacing and strong border identity
- **[SECONDARY SUBJECTS]** also obey the same delicate field logic
- **[BODY FIELD / INTERVAL MOTIF ZONES]** become open, measured, and woven rather than filled or decorative
- **[BORDERS / EDGE ZONES / LONGITUDINAL STRUCTURES]** become richer odd-step identity fields rather than trims
- **[GARMENT / CONTEXT / ENVIRONMENT]** becomes a broader but still Wangkhei-governed cloth world rather than generic realism

Let these become richer:

- field layering
- border-to-body relation
- airy woven spacing
- stepped edge rhythm
- garment-world hierarchy
- controlled 2D + 3D expansion
- full-frame Wangkhei coherence

Keep unchanged:

- woven delicacy
- extra-weft memory
- interval motif logic
- border dominance
- odd-step discipline

- Meitei ceremonial-wrapper identity

Avoid:

- generic woven fantasy
- dense all-over patterning
- print-based borders
- heavy cloth behavior
- realism-first textile styling
- any major element leaving the Wangkhei Phee system.

Image-to-Image

Convert this source image into a **creative 2D + 3D Wangkhei Phee translation** from Manipur.

Preserve the source image's main subject count, field hierarchy, garment order, and readability, but reconstruct all visible elements through **Wangkhei Phee woven body-and-border grammar**. Let the image become richer and more layered than a literal cloth study, but keep it fully rooted in **muslin-like openness, extra-weft structure, wide-interval motif placement, odd-step border order, and Meitei ceremonial cloth identity**.

If the source image contains garments, edge zones, drapes, body fields, or textile divisions, convert them so they feel like true Wangkhei Phee structures rather than generic fabrics with traditional styling. If the source image includes surrounding space or context, reorganize it so the full frame feels generated by coherent airy woven intelligence rather than by normal realism.

Retain:

- delicate muslin-like field
- extra-weft woven memory
- wide-interval motif structure
- border authority
- odd-step geometry
- Meitei garment-world dignity

Allow:

- richer layering
- broader woven field-world expansion
- stronger border-led organization
- controlled 2D + 3D articulation

Do not simply add a stepped border to normal cloth.
Do not make it generic Manipuri textile fantasy.
Do not let realism dominate airy weave logic.
Do not lose the body-versus-border relationship.
Do not let the frame stop behaving like Wangkhei Phee.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from the authentic grammar of **traditional Wangkhei Phee from Manipur**. The image must feel believable, spatial, and materially convincing, but its realism must remain fully controlled by **delicate muslin-like woven structure, extra-weft motif insertion, wide-interval body motifs, strong border emphasis, and odd-step geometric discipline**.

Build the world from inside the craft system: the body must still feel light, fine, and airy; the motifs must still feel woven, not added; the border must still act as the main identity-bearing zone; and the full frame must still feel generated by **Wangkhei weaving intelligence** rather than by ordinary garment realism.

Material logic is critical. The world must still remember **fine cotton muslin-like cloth**, not print-based fashion fabric or generic opaque handloom. Do not turn Wangkhei Phee into heavy luxury textile realism.

Shape and space logic are critical. Forms must remain **airy, interval-based, border-ordered, and field-structured** even as the world gains dimensionality. Space must grow from woven hierarchy, not replace it. Environment, folds, and garment behavior must all feel like extensions of Wangkhei Phee textile intelligence.

Light and value logic are critical. Lighting must strengthen **delicacy, transparency/lightness, body-versus-border separation, and stepped border readability**, not dissolve them into generic fashion realism.

Do not make it a realistic garment world with Wangkhei edging.
Do not make it print-like muslin realism.
Do not let the border become decorative trim only.
Do not let extra-weft memory disappear into surface styling.
Do not allow any major element to belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **full 3D realistic dimensional world** generated from authentic **Wangkhei Phee from Manipur**.

Treat the style as:

a **delicate Meitei woven wrapper/textile**,
a **Wangkhei body-and-border system**,
an **extra-weft structural language**,
and a believable reality whose shape, volume, light, and space are still controlled by airy woven hierarchy.

Style system that must remain unchanged:

- muslin-like body-field delicacy
- extra-weft woven construction
- wide-interval body motif order
- border dominance
- odd-step geometric discipline
- Meitei ceremonial wrapper identity
- full-frame coherence inside one Wangkhei Phee world

Translate the scene like this:

- **[MAIN SUBJECT]** becomes a fully dimensional Wangkhei Phee-derived woven field or form structured by airy body logic and strong border identity
- **[SECONDARY SUBJECTS]** become dimensional but still obey the same body-versus-border order
- **[BODY FIELDS / INTERVAL MOTIF ZONES / EDGE STRUCTURES / SUPPORTS]** become tactile Wangkhei-world elements
- **[ENVIRONMENT]** becomes a believable spatial field organized by woven delicacy, border emphasis, and ceremonial garment order

Increase:

- believable textile volume
- woven material depth
- spatial completion
- border/body coherence
- full-frame Wangkhei integration

Do not lose:

- delicate woven openness
- extra-weft memory
- interval motif structure
- border authority
- odd-step order
- Meitei garment-world grounding

Avoid:

- generic handloom realism
- dense patterned-cloth behavior
- print-like border logic
- fashion-first styling
- trim replacing structural identity
- any non-Wangkhei system taking over the frame.

Image-to-Image

Convert this source image into a **full 3D realistic Wangkhei Phee world** from Manipur.

Preserve the source image's main subject count, field hierarchy, garment order, and readability, but rebuild the entire image through **Wangkhei Phee woven body-and-border grammar**. Convert ordinary cloth into **delicate extra-weft structured textile fields**. Convert generic border behavior into **odd-step identity logic**. Convert surface decoration into **woven interval-and-edge hierarchy**. Convert normal garment realism into a dimensional world still controlled by **airy muslin-like field logic, border authority, and Meitei ceremonial textile intelligence**.

If the source image contains garments, edges, drapes, body fields, or textile zones, transform them into Wangkhei-derived structures that still feel governed by real woven construction. If the source image includes surrounding space or environment, rebuild it so the full frame feels born from a coherent Wangkhei Phee world rather than from ordinary realism.

Retain:

- delicate muslin-like woven field
- extra-weft body-and-border memory
- wide-interval motif placement
- border dominance
- odd-step geometric order
- Meitei ceremonial-wrapper identity

Increase:

- dimensional realism
- woven material depth
- spatial completion
- garment-world coherence
- full-frame Wangkhei integration

Do not paste a Wangkhei-style border onto normal cloth.

Do not turn it into generic Manipuri handloom realism.

Do not let realism erase airy woven hierarchy.

Do not let the border lose structural authority.

Do not allow one major element to remain outside the Wangkhei Phee system.
