

Yakshagana - Karnataka

V1 — Authentic Style

Universal Hard Prompt

Create a scene in the authentic source-faithful visual logic of **Yakshagana from Karnataka**, treating it as a **music-led dance-drama performance system**, not as generic folk theatre, not as costume pageantry, and not as mythological dance without a real performance engine.

Build the full image as if it belongs to a true **coastal Karnataka Yakshagana performance**. The scene must be governed by:

- **Bhagavatha-led sung narration**
- **himmela and mummela working together**
- **a clear prasanga from the Ramayana, Mahabharata, or a related legend**
- **drum-led dramatic energy**
- **dialogue-rich role enactment**
- **open-air night-performance atmosphere**
- **strong role transformation through costume, face paint, and large headgear**

The performance must not feel like generic stage spectacle. It must feel like a live enacted epic episode. The Bhagavatha should feel central to the performance flow. The himmela should feel like the musical body of the form. The mummela should feel like the enacted role body of the form. The actors must feel like they are interpreting sung narrative, not performing independently from it.

The role-world should come from:

- heroic, divine, villainous, and other epic characters
- one focused prasanga or dramatic sub-story
- conflict, confrontation, entrance, challenge, and performance escalation
- a strong theatrical connection between music, movement, and speech

The visual world should include:

- striking Yakshagana costume masses
- strongly painted faces
- large-scale headgear
- percussion-led performance intensity
- a night-stage or open-air village-performance ecology
- a clear relation between musicians and performers

Whole-frame rule: if the image includes Bhagavatha, musicians, actors, drums, costume, makeup, headgear, epic characters, and stage atmosphere, all of them must belong to one

Yakshagana grammar. The style must not stop at costume and makeup. Structure, music, enactment, and prasanga logic must all become Yakshagana.

Do not generate:

- generic folk theatre
- mythological costume display
- dance performance with no Bhagavatha logic
- spoken drama with background music only
- decorative “Indian epic stage” mood
- stage glamour with no coastal Karnataka Yakshagana performance engine

The final result must feel like **a true Yakshagana performance: Bhagavatha-led musical narration, himmela–mummela collaboration, prasanga-based epic enactment, drum-led night-stage energy, and transformed role-bodies in costume, makeup, and headgear.**

Reusable Variable Template

Create **[CHARACTER / SCENE / PRASANGA MOMENT]** in the authentic source-faithful visual logic of **Yakshagana from Karnataka**, treating it as a **music-led dance-drama performance system**.

Core style system to preserve:

- Bhagavatha-centered narration
- himmela–mummela dual structure
- prasanga-based epic performance
- drum-led movement energy
- scholarly / dramatic dialogue
- role transformation through costume, face paint, and headgear
- coastal Karnataka open-air night-performance identity
- whole-performance coherence

Translate the scene like this:

- **[NARRATIVE SPINE]** becomes a clear prasanga-based dramatic moment
- **[MUSICAL BODY]** becomes a visible or strongly felt himmela with Bhagavatha at the core
- **[ACTING BODY]** becomes a true mummela role-performance
- **[CHARACTER DESIGN]** becomes role-transformative rather than decorative
- **[STAGE ENERGY]** becomes drum-led and musically charged
- **[FULL FRAME]** must read as one Yakshagana performance system

Keep:

- Bhagavatha first
- himmela–mummela structure
- prasanga first
- music first
- role transformation
- overnight open-air ecology
- whole-frame coherence

Avoid:

- generic folk stage
- costume showcase
- mythological dance-only styling
- theatrical spectacle without music-led structure
- decorative epic mood without Yakshagana grammar

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Yakshagana from Karnataka**.

Preserve the source image's main character count, broad dramatic readability, and central conflict or performance beat, but rebuild the full image through **Bhagavatha-led narration, himmela–mummela structure, prasanga-based epic enactment, drum-led performance energy, and strong role transformation through Yakshagana costume, face paint, and headgear**. Replace any generic theatre, costume spectacle, spoken mythology, or stage glamour with a true **Yakshagana** performance system.

If the source image contains mythological characters, rebuild them as Yakshagana role-bodies. If it contains a stage, rebuild it as a night-performance field with visible or implied himmela and Bhagavatha presence. If it contains conflict, rebuild it as part of one prasanga. If it contains costumes, rebuild them so they transform the performers into Yakshagana characters rather than simply dressing them up.

Do not simply add Yakshagana makeup and costume to the source image. Do not keep another theatre language underneath. Rebuild the full scene so **music, narration, actors, prasanga, drums, costume, headgear, and role-energy all become one authentic Yakshagana system**.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D translation** of **Yakshagana from Karnataka**. This is not generic mythological folk theatre styling, not costume transfer, and not just “big headgear plus face paint.” It should feel like the full **Yakshagana grammar** has begun to reorganize the image more powerfully while still remaining unmistakably rooted in **Bhagavatha-led narration, himmela–mummela structure, prasanga-based epic enactment, drum-led performance, and role transformation**.

Let the performance stop behaving like ordinary stage drama and start behaving like a **music-driven theatrical organism**. Let the Bhagavatha become more compositionally decisive. Let the split between himmela and mummela become more structurally legible. Let the prasanga tension become more formally visible. Let drums, costume, headgear, and role-body movement all feel more deeply integrated into one system.

This version must transform more than costume. Change:

- the **narrative logic** so one prasanga clearly governs the scene
- the **musical logic** so Bhagavatha and himmela feel structurally central
- the **actor-body logic** so mummela feels like enacted song, not generic acting
- the **movement logic** so role-energy becomes more compositionally active
- the **costume logic** so headgear, face paint, and dress become inseparable from role behavior
- the **stage logic** so the whole frame feels like Yakshagana night-performance ecology

Keep the source truth intact:

- music remains the engine
- Bhagavatha remains central
- himmela–mummela relation remains active
- prasanga remains the dramatic spine
- costume remains role-transformative, not decorative
- the form remains clearly Yakshagana rather than generic folk theatre

Do not generate:

- costume-heavy mythology
- dramatic makeup on generic actors
- folk stage energy with no himmela logic
- music as background only
- generic epic theatre spectacle
- decorative coastal-performance styling

The final result must feel like **Yakshagana grammar has reauthored the scene through Bhagavatha-led music flow, himmela–mummela tension, prasanga structure, drum-driven energy, and role-transformative costume performance**.

Reusable Variable Template

Create **[CHARACTER / SCENE / PRASANGA MOMENT]** as a **creative 2D + 3D translation of Yakshagana from Karnataka**.

Preserve these style-core rules:

- Bhagavatha-centered narration remains primary
- himmela–mummela structure remains active
- prasanga remains structurally clear
- music and drums remain the engine
- role transformation remains stronger than costume display
- the full scene must be rebuilt through Yakshagana grammar

Translate the scene like this:

- **[PRASANGA CORE]** becomes a stronger dramatic spine
- **[BHAGAVATHA / HIMMELA SIDE]** becomes more compositionally present
- **[MUMMELA ROLE-BODIES]** become more clearly enacted and rhythm-bound
- **[COSTUME / HEADGEAR / FACE]** become more fully integrated into dramatic identity
- **[STAGE ENERGY]** becomes more charged by percussion and live performance
- **[FULL FRAME]** must feel reauthored by Yakshagana performance logic

Mandatory transformation rule:

Do not transfer only costume, makeup, or mythology.

Also transform:

- Bhagavatha relation
- himmela–mummela split
- prasanga clarity
- musical engine
- drum energy
- role-body movement
- whole-frame performance coherence

Let these become richer:

- narrative force
- music-body presence
- role confrontation
- percussion-driven movement
- costume-as-performance
- night-stage atmosphere

Keep unchanged:

- Bhagavatha first
- himmela–mummela first

- prasanga first
- music first
- Yakshagana not generic folk theatre
- whole-system coherence

Avoid:

- costume transfer
- epic costume spectacle
- generic mythological stage
- visual energy without performance engine
- decorative folk-drama mood

Image-to-Image

Convert this source image into a **creative 2D + 3D Yakshagana world from Karnataka**.

Preserve the source image's main character count, broad dramatic readability, and conflict structure, but rebuild the full scene through **Bhagavatha-led narration, himmela–mummela coordination, prasanga-based epic enactment, drum-led performance energy, and Yakshagana role transformation through costume, face paint, and headgear**. Let the scene become more compositionally transformed than a literal stage reference while staying fully rooted in Yakshagana grammar.

Rebuild the narrative so one prasanga clearly drives the scene. Rebuild the performance field so the himmela and mummela belong to one live system. Rebuild the actor-bodies so movement feels rhythm-bound and role-coded. Rebuild costume so it becomes inseparable from performance identity. Rebuild the stage atmosphere so it feels like a public overnight Yakshagana world.

Do not just add Yakshagana costume and face paint to the source image. Do not keep another theatre language underneath. Rebuild the full scene so **Bhagavatha, himmela, mummela, prasanga, drums, role transformation, and night-theatre ecology all become one Yakshagana system**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from **Yakshagana from Karnataka**. This is not a realistic mythological stage scene with big costumes added later. It is a believable world in which **Bhagavatha-led narration, himmela–mummela structure,**

prasanga-based epic enactment, drum-led overnight performance, and role transformation through costume, face paint, and headgear govern every visible element. Karnataka Tourism and the Karnataka workbook are the real anchors for this system.

Translate the full style-system into reality. Every part of the scene must adapt:

- the narrative must behave like one enacted prasanga
- the Bhagavatha must behave like the real performance center
- the himmela must behave like the actual musical body of the form
- the mummela must behave like actors interpreting sung narrative
- drums and song must behave like the real energy-source of the event
- costume, face paint, and headgear must behave like real role-transformation systems
- the stage must behave like a real open-air night-performance ecology

This version must not stop at realistic costume texture. It must rebuild:

- **narrative logic** so prasanga remains structurally active
- **music logic** so Bhagavatha and himmela remain central
- **acting logic** so mummela remains musically bound
- **movement logic** so drum-energy remains visible in performance bodies
- **role logic** so costume and makeup remain transformative
- **environment logic** so the whole frame feels like Yakshagana's public night-theatre world

If the image contains epic roles, they must still remain Yakshagana roles, not generic mythological actors. If it contains a stage, that stage must still feel like Yakshagana ecology, not ordinary folk theatre. The final result must still feel like Yakshagana, not generic realistic stage drama.

Do not generate:

- realistic folk theatre with decorative costumes
- generic mythological stage realism
- Bhagavatha-less costume spectacle
- background-music theatre realism
- overnight stage realism with no prasanga structure
- realism that erases Yakshagana's music-led engine

The final image must feel like **a real Yakshagana world where Bhagavatha, himmela, mummela, prasanga, drums, role transformation, and open-air night performance have become materially and theatrically believable reality.**

Reusable Variable Template

Create **[CHARACTER / SCENE / PRASANGA MOMENT]** as a **full 3D realistic dimensional world** generated from **Yakshagana from Karnataka.**

Style system that must remain unchanged:

- Bhagavatha-led narration remains primary
- himmela–mummela structure remains active
- prasanga remains the story-engine
- music and drums remain the performance engine
- role transformation remains central
- overnight open-air ecology remains part of the world
- the entire frame must be rebuilt through one Yakshagana grammar

Translate the scene like this:

- **[PRASANGA CORE]** becomes a believable enacted epic sub-story
- **[BHAGAVATHA / HIMMELA]** become materially and dramatically real
- **[MUMMELA ROLE-BODIES]** become believable but still Yakshagana-specific performers
- **[COSTUME / FACE / HEADGEAR]** become real role-transformation systems, not decoration
- **[STAGE / NIGHT ECOLOGY]** becomes a believable coastal Karnataka performance field
- **[FULL FRAME]** becomes a coherent Yakshagana reality rather than generic realism

Increase:

- stage-space tactility
- music-body presence
- role-energy realism
- costume transformation realism
- night-performance atmosphere
- whole-system coherence

Do not lose:

- Bhagavatha first
- himmela–mummela first
- prasanga first
- music first
- Yakshagana role-transformation
- whole-frame unity

Avoid:

- realistic costume pageant
- generic folk-theatre realism
- mythological stage realism with background musicians only
- dance spectacle realism
- visual realism with no Yakshagana engine

Image-to-Image

Convert this source image into a **full 3D realistic Yakshagana world from Karnataka**.

Preserve the source image's main character count, dramatic readability, and central confrontation or performance beat, but rebuild every visible element through **Bhagavatha-led narration, himmela–mummela structure, prasanga-based epic enactment, drum-led performance energy, and strong Yakshagana role transformation through costume, face paint, and headgear**. Replace generic theatre, mythological stage drama, costume spectacle, or generic folk-performance realism with a full Yakshagana system.

Rebuild the scene so one prasanga truly governs it. Rebuild the music-body so Bhagavatha and himmela remain active. Rebuild the mummela so role-performance feels musically driven. Rebuild costume and makeup so they transform the body rather than decorate it. Rebuild the stage atmosphere so it feels like a public all-night Yakshagana performance.

Do not simply add realistic Yakshagana costume to the source image. Do not keep the original stage language underneath. Rebuild the full scene so **Bhagavatha, himmela, mummela, prasanga, drums, role-bodies, costume transformation, and night-performance ecology all become one believable Yakshagana reality**.
