

Shimpla Hastkala coastal decorative , shell, coconut-Goa

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **authentic source-faithful visual logic of Shimpla Hastkala / Goa Sea Shell Craft**. Treat this as a **real shell, assembled decorative-object tradition**, not as generic beach décor, coastal color styling, tropical ornament, mural pattern, or shell-themed fashion design. Build the image as if it comes from a real Goa shell-craft world shaped by **actual seashells, conch shells, cowries, and mother-of-pearl elements**, combined through **selection, drilling, mounting, clustering, and composite assembly** into a decorative-functional object.

The image must read **object-first**. The object must feel physically built from real shell pieces rather than coated with shell mood. Preserve the sense of **shell edges, shell thickness, nacre or shell reflectivity where relevant, clustered placement, support structure, and handmade composite objecthood**. The object should feel materially rooted in **marine shell and assembly**, not just “coastal and pretty.”

Use the native Shimpla object world: **jewelry, boxes, mirror frames, clocks, lamp shades, chandeliers, curtains, hanging decorative pieces, idols, and other shell-built decorative-use objects**. If the object contains figural or devotional elements, they must still behave as **shell-built presences**, not realism-first sculpture. Any support material such as brass, wood, or structural base must remain secondary to the shell identity.

Material behavior must preserve **real shell truth**: natural shell tone, subtle nacre or pearly response where relevant, curved shell edge rhythm, drilled and mounted assembly, and handcrafted object variation. Composition must remain **object-centered and shell-cluster-led**. Ornament must remain structural and shell-born, not painted on later.

Do not make this generic beach décor, printed shell patterning, plastic shell imitation, resin coastal souvenir, or ordinary object with shells glued on as afterthought. Do not lose real shell identity. Do not lose assembly logic. Do not let atmosphere overpower shell-object truth.

Reusable Variable Template

Create [SUBJECT / OBJECT / DECORATIVE FORM / JEWELRY OR HOUSEHOLD OBJECT] in the **authentic source-faithful visual logic of Shimpla Hastkala / Goa Sea Shell Craft**.

Treat the style as a **real-shell assembled object system** built from:

- actual shell material
- shell-first assembly
- clustering, drilling, mounting, and support structure
- decorative-functional objecthood
- marine-material identity
- object-first silhouette

Preserve these non-negotiable style rules:

- the result must feel built from real shells
- the object must feel assembled, not molded or sculpted as one mass
- shell edges, shell surfaces, and shell clustering must remain visible
- the object must remain stronger than the environment around it
- decorative use must still feel believable
- the whole image must behave like a Goa shell-object field

Translate the subject like this:

- **[MAIN OBJECT / MAIN FORM]** becomes the dominant shell-built Goa craft object
- **[SECONDARY OBJECTS / SUPPORT ELEMENTS / HANGING ELEMENTS / FRAMING ELEMENTS]** become subordinate shell-built or support-built forms
- **[SURFACE DETAIL]** becomes shell rhythm, nacre response, clustering density, shell-edge patterning, and mounted attachment logic
- **[SUPPORT SPACE / CONTEXT]** remains minimal and subordinate, only enough to strengthen shell-object truth

Keep:

- real shell identity
- shell assembly logic
- decorative-functional objecthood
- coastal material truth
- object-first composition

Avoid:

- generic coastal décor
- shell-print styling
- plastic imitation
- molded one-piece souvenir look
- atmosphere-first image logic
- shell mood added afterward

Image-to-Image

Convert this source image into the **authentic source-faithful visual logic of Shimpla Hastkala / Goa Sea Shell Craft**.

Preserve the source image's **subject count, main object relationships, silhouette logic, and overall readability**, but rebuild the entire image as a **real-shell assembled Goa craft object system**. Replace ordinary surfaces and ordinary construction logic with **actual shell identity, clustered shell placement, drilled and mounted assembly, nacre or shell reflectivity where relevant, and decorative-functional shell objecthood**.

If the source contains boxes, frames, hanging objects, lamps, jewelry, or decorative forms, reconstruct them as **shell-built Shimpla objects**, not as ordinary objects with shell styling. If the source contains figural or devotional elements, rebuild them as **shell-assembled presences** rather than realism-first sculpture. If the source contains support structures, they must remain secondary to shell truth.

Do not simply add shell texture. Do not turn it into generic beach-shop decoration. Do not make it plastic, resin, or fake shell luxury décor. The final result must feel like the source image has been fully rebuilt through authentic Shimpla shell-object intelligence.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic handcrafted dimensional visual logic of Shimpla Hastkala / Goa Sea Shell Craft**. Keep the full source grammar intact, but translate it into a richer handcrafted dimensional shell-object world. This version must still feel completely **real-shell-born and assembly-born**, not realism-born and not generic coastal luxury styling.

Preserve the full source grammar: **actual shell material, shell-first assembly, clustering, drilling, mounting, composite support logic, and decorative-functional objecthood**. Then allow the object to become more tactile, more materially present, and more spatially articulated while still remaining unmistakably Shimpla.

The object must still feel first assembled from real shells. The surface must still feel like shell surface, not glossy synthetic coating. The object may gain more depth, stronger layering, clearer support-material relation, richer nacre or shell-light interaction where relevant, and deeper shell clustering, but it must still remain **shell-object truth first**.

Material behavior should preserve natural shell body, subtle handmade irregularity, layered shell depth, support-material contrast, and visible process memory. Ornament must remain structural and integrated through shell placement. Composition must still remain **object-centered, assembly-led, and process-aware**.

Do not make this a glossy beach-luxury object render, plastic tourist décor, generic coastal lifestyle object, or realism-first decorative scene. Do not let dimensionality erase shell identity or assembly truth.

Reusable Variable Template

Create **[SUBJECT / OBJECT / DECORATIVE FORM / JEWELRY OR HOUSEHOLD OBJECT]** in the **authentic handcrafted dimensional visual logic of Shimpla Hastkala / Goa Sea Shell Craft**.

Treat the style as a **real-shell assembled object system** and translate it into a richer handcrafted dimensional world while preserving these non-negotiable rules:

- the object still feels built from real shells
- shell assembly still remains primary
- support-material relation still remains visible
- shell clustering still feels handmade, not industrial
- the object remains decorative-functional, not abstract
- the environment remains secondary to object truth
- the whole image remains object-first, not atmosphere-first

Translate the subject like this:

- **[MAIN OBJECT / MAIN FORM]** becomes a richer tactile shell-built Goa craft object
- **[SECONDARY OBJECTS / SUPPORT ELEMENTS / FRAMING PARTS / HANGING PARTS]** become subordinate assembled shell forms
- **[SURFACE DETAIL]** becomes dimensional shell clustering, nacre response, shell-edge rhythm, mounting logic, and layered relief
- **[SUPPORT SPACE / CONTEXT]** becomes a restrained field that strengthens handcrafted shell-object presence

Let these become richer:

- shell tactility
- clustering depth
- layered assembly
- shell-light interaction
- support-material contrast
- handcrafted detail legibility

Keep unchanged:

- real shell identity
- shell assembly logic
- decorative-functional objecthood
- Goa shell-craft grounding

Avoid:

- glossy tourist-object rendering
- plastic shell imitation
- beach-luxury styling
- resin décor feel
- environment overpowering the object
- shell mood without real object structure

Image-to-Image

Convert this source image into the **authentic handcrafted dimensional visual logic of Shimpla Hastkala / Goa Sea Shell Craft**.

Preserve the source image's **main object relationships, silhouette logic, and readability**, but rebuild the full image through a **dimensional Goa shell-object system**. Replace ordinary construction logic with **real shell identity, shell clustering, drilled and mounted assembly, nacre or shell response where relevant, support-material relation, and handcrafted decorative-functional objecthood**.

Allow the image to gain richer tactile depth, stronger layering, more visible shell-edge structure, and more dimensional object presence than the source-faithful version, but keep the style fully object-first. Every shell, support, hanging unit, frame element, and clustered surface must still feel like Shimpla craft rather than ordinary décor with shell styling.

Do not shell-texture a normal object and call it done. Do not turn the scene into generic coastal décor or luxury shell styling. The final result must feel like the source image has been rebuilt through a handcrafted dimensional Shimpla shell-craft intelligence.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic translation of Shimpla Hastkala / Goa Sea Shell Craft**. Convert the complete source grammar into a believable three-dimensional shell-object world while keeping **Shimpla assembly intelligence** in control. This must not become generic coastal décor realism, beach-luxury object styling, or plastic shell fantasy. It must feel like **a Goa shell-object world became real**.

Keep the full source grammar intact: **actual seashell / conch / cowrie / mother-of-pearl identity, shell-first assembly, drilling and mounting, support-material relation, decorative-functional objecthood, and Goa shell-craft grounding**. Then translate that

grammar into full volume: stronger object presence, richer spatial staging, clearer figure-ground separation where needed, deeper shell-world coherence, and cinematic readability — but only under the authority of the shell-assembly system.

Preserve the origin-material memory. By default, render the world as if it grows directly out of **real shells, shell edges, shell thickness, nacre or shell reflectivity where relevant, drilled attachment, mounting points, and composite supports such as brass or wood**. Even in full 3D, the world must still visibly remember **marine shell material and assembly**. The result must not become plastic shell décor, resin beach styling, or glossy tourist-luxury object design.

The object must still govern the scene. Frames, jewelry, lamps, chandeliers, curtains, idols, and decorative forms must still behave as **Shimpla shell-built presences**, not as ordinary realistic props. The world must not merely host the style; the world must feel generated by the style's shell-assembly intelligence.

Do not create generic beach-shop realism, glossy coastal décor, tropical luxury object styling, or ordinary realism with shell decoration added later. Do not let shine replace shell truth. Do not erase support-material relation. Do not let environment overpower the object.

Reusable Variable Template

Create [SUBJECT / OBJECT WORLD / MASK / LAMP / BOWL / DECORATIVE OR UTILITY FORM] as a **fully volumetric cinematic translation of Goa Coconut Shell Craft / Coconut Mask Carving**.

Treat the style as a **real coconut-shell carved object system** and translate it into a believable three-dimensional world without losing these non-negotiable rules:

- the object still feels transformed from real coconut shell
- hollow-shell geometry remains active in the final image
- carved edges and perforation remain visible
- natural shell curve, grain, and thickness remain intact
- decorative-functional objecthood remains clear
- the object remains stronger than the environment around it
- the whole frame remains governed by coconut-shell object intelligence

Material-origin rule:

- default to **real coconut shell + hollow-form + cutwork origin memory**
- preserve shell curvature, shell-wall thickness, cut edges, perforated openings, grain, dark-brown polished shell body, and lighter carved highlights
- keep the material tactile, process-born, and non-wooden
- even in full 3D, the world must still feel **born from one coconut shell body being transformed**, not from eco-product styling

Translate the subject like this:

- **[MAIN OBJECT / MAIN MASK / MAIN FORM]** becomes the dominant volumetric coconut-shell Goa presence
- **[SECONDARY OBJECTS / SUPPORT ELEMENTS / HANGING PARTS / DECORATIVE SUPPORTS]** become subordinate shell-carved forms with matching process-born logic
- **[SURFACE DETAIL]** becomes volumetric cutwork, shell-rim rhythm, hollow-depth truth, polished-brown to carved-light contrast, and grain-led shell articulation
- **[ENVIRONMENT / SUPPORT SPACE]** becomes a cinematic but still object-governed coconut-shell craft world

Increase:

- object volume and weight
- figure-ground separation where needed
- shell-light interaction
- cutwork and hollow-depth clarity
- spatial readability
- world-scale shell-object coherence

Do not lose:

- real coconut-shell identity
- hollow-shell geometry
- cut / carve / pierce logic
- decorative-functional objecthood
- Goa coconut-shell craft grounding
- process-memory stronger than tropical styling

Avoid:

- generic eco décor realism
- wooden-mask styling
- resin product styling
- tropical lifestyle glamour
- environment overpowering shell-object truth
- brown-object mood without real shell logic

Image-to-Image

Convert this source image into a **fully volumetric cinematic translation of Goa Coconut Shell Craft / Coconut Mask Carving**.

Preserve the source image's **subject count, main object relationships, silhouette logic, and scene readability**, but rebuild the entire frame as if **Goa coconut-shell craft grammar**

became a cinematic three-dimensional world. Replace ordinary surface and object logic with **real coconut-shell identity, hollow-shell ancestry, shell thickness, cut and carved transformation, perforation where relevant, dark-brown polished shell body, lighter carved highlights, and handcrafted decorative-functional shell intelligence.**

Then expand that structure into full volume: stronger object mass, richer cutwork depth, clearer spatial staging, deeper material-light interaction, and fuller shell-world completion. But every part of the frame must still obey Goa coconut-shell law. The object must remain object-first. The surface must still feel process-born. The world must still read as a hollow-shell object world made real, not as ordinary realism with tropical brown décor added later.

Do not simply turn the source object brown. Do not add cutwork to a normal object. Do not make it wooden-mask realism or eco-luxury décor styling. Do not lose the origin-material memory of **real coconut shell, hollow-shell ancestry, and carved transformation truth.**

The final image must feel like the source image has been fully rebuilt through **fully volumetric Goa coconut-shell intelligence with process-memory, object-truth, and hollow-shell meaning all intact.**
