

Suf embroidery - Gujarat

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of Suf embroidery from Gujarat as a counted geometric embroidery tradition from Kutch.

Treat this as a reverse-worked hand embroidery system built from triangles, counted warp-and-weft logic, and mentally generated pattern structure. Do not treat it as generic Kutchi embroidery, mirror-work embroidery, freehand floral embroidery, or decorative geometric ornament.

Build the entire image as if it is generated from true Suf embroidery intelligence:

countable cloth structure,
reverse-side construction,
no pre-drawn motif,
tiny triangle-built geometry,
surface satin-stitch field filling,
balanced symmetrical pattern order,
fine angular segmentation,
cloth-grid dependence,
and hand-counted precision.

The pattern must feel as though it was imagined mentally and counted directly into the cloth, not sketched first.

The geometry must feel triangle-generated, not merely decorated with angular shapes.
The surface must feel stitched and count-built, not printed or graphically rendered.

For source-faithful Suf, keep mirror absent unless explicitly required for a contemporary adaptation.

For source-faithful color behavior, avoid default black and blue dominance; let the palette feel closer to traditional Suf memory unless a contemporary variation is intentionally requested.

If humans, animals, trees, props, objects, architecture, ground, or environment are present, rebuild all of them through Suf counted-geometry logic so the whole frame feels born from reverse-counted triangular embroidery structure, not like a normal scene with one embroidered patch inserted later.

Human skin and faces must remain clean and readable.

The style must enter through counted segmentation, triangle-built massing, satin-stitched field logic, cloth-structured order, and symmetrical embroidery intelligence across the whole image.

Avoid:

generic Kutchi embroidery,
mirror-work-first styling,
freehand floral stitching,
printed geometry,
one Suf patch inside an unrelated world,
surface-only embroidery.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in the authentic visual logic of Suf embroidery from Gujarat.

Treat the style as a counted geometric embroidery system built from reverse-side working and triangle-based construction, not as generic geometric folk embroidery.

Core style lock:

countable cloth grid,
reverse-side counting,
no pre-drawing,
triangle-built pattern logic,
surface satin-stitch filling,
balanced symmetrical field order,
mirror non-core in source-faithful form,
whole-frame Suf consistency.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a Suf-built embroidered presence generated through counted triangular structure.

[HUMANS] are rebuilt through geometric stitched segmentation, embroidered garment-field logic, and triangle-based mass grouping; skin stays clean and human.

[ANIMALS] are rebuilt through triangle-generated counted embroidery structure, not naturalistic texture.

[TREES / FOLIAGE] are rebuilt through geometric field clustering, angular embroidery logic, and counted surface order instead of natural leaf realism.

[OBJECTS / GROUND / ARCHITECTURE] inherit the same reverse-counted stitched logic and symmetrical angular organization.

[ENVIRONMENT] becomes a Suf embroidery world rather than generic realism.

Keep:

reverse-counted intelligence,
triangle-built field logic,
no-pre-drawing discipline,
countable cloth dependence,
symmetrical satin-filled order,
source-faithful mirror restraint.

Avoid:

generic Kutchi embroidery,
mirror as default shorthand,
freehand motif drawing,
printed pattern simulation,
one correct textile patch inside a generic world.

Image-to-Image

Convert this source image into the authentic visual world of Suf embroidery from Gujarat.

Preserve the source image's main subject relationships, action, and readability, but rebuild the entire image through Suf counted-embroidery grammar.

Replace ordinary surfaces with countable embroidered cloth behavior.

Replace free decoration with reverse-counted triangle logic.

Replace sketched motifs with mentally generated geometric field construction.

Replace generic ornament with satin-filled symmetrical embroidery order.

If the source contains people, animals, trees, props, objects, ground, or environment, convert all of them so they feel generated by Suf embroidery intelligence instead of remaining normal realism.

Do not simply add geometric embroidery to clothing.

Do not leave the environment generic.

Do not make it mirror-work-first.

Do not make it look like printed geometry.

The final image must feel like a real Suf counted embroidery system expanded across the whole frame.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image translation rooted in Suf embroidery from Gujarat.

This is not generic Kutchi geometry and not a full realistic world yet.

It must remain source-rooted in Suf grammar:

countable cloth,

reverse-side construction,

no pre-drawing,

triangle-based geometry,
surface satin-stitch filling,
balanced symmetrical field order,
and mirror as non-core in the source form.

Let the image gain dimensional body, layered stitched-field depth, richer textile tactility,
stronger triangular segmentation, more articulated symmetry, and more visible relation
between cloth grid and embroidered fill.

But keep the image counted-embroidery-first.

It should still feel like Suf intelligence is constructing the image, not generic realism.

Extend Suf across all elements:

humans are shaped through triangle-built segmentation, embroidered garment-field order,
counted angular massing, and stitched surface logic;

animals are shaped through counted geometric body-logic and angular embroidery structure;

trees are shaped through triangle-clustered foliage masses and stitched field geometry;

props, ground, and architecture are shaped through counted angular zoning, satin-filled
segmentation, and symmetrical surface order.

Faces and skin stay readable and human.

No generic mirrors.

No freehand-looking motifs.

No drawn-first embroidery illusion.

Avoid:

generic geometric embroidery,

mirror-heavy Kutchi styling,

printed pattern look,

freehand floral embroidery,

surface decoration added afterward,

normal realism with one Suf patch inserted.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a creative 2D + 3D translation rooted in Suf
embroidery from Gujarat.

Preserve these source-core rules:

reverse-counted embroidery remains primary,

triangle-built logic remains structural,

countable cloth remains active,

no-pre-drawing discipline remains implied,

symmetrical satin-filled fields remain visible,

the whole frame remains inside one Suf system.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a dimensionalized Suf embroidered image-zone.
[HUMANS] are rebuilt through angular stitched segmentation, counted garment-field rhythm, and geometric embroidered grouping; skin remains clean.
[ANIMALS] are rebuilt through Suf triangle logic and counted surface construction.
[TREES / FOLIAGE] are rebuilt through triangle-cluster geometry and embroidered field order.
[OBJECTS / GROUND / ARCHITECTURE] gain richer layering but remain governed by counted angular embroidery structure.
[ENVIRONMENT] becomes a Suf image-field rather than generic realism.

Let these become richer:
stitched-field depth,
triangle density,
cloth tactility,
geometric segmentation,
image-body,
symmetrical pattern continuity.

Keep unchanged:
reverse-counted intelligence,
triangle-built structure,
mirror non-core,
countable-cloth dependence,
Suf branch purity.

Avoid:
generic Kutchi ornament,
mirror shortcut,
drawn-first motif logic,
printed geometry,
one Suf section inside an unrelated image.

Image-to-Image

Convert this source image into a creative 2D + 3D Suf embroidery translation from Gujarat.

Preserve the source image's main action, subject count, and readability, but reconstruct the full image through Suf counted-geometry embroidery grammar.

Replace ordinary surfaces with countable cloth behavior and stitched fill.
Replace loose decoration with reverse-counted triangular field logic.
Replace generic geometric styling with satin-filled symmetrical embroidery order.

Allow the image to gain layered embroidered depth, richer textile tactility, stronger angular segmentation, and more visible image-body.
But do not let it become full realism.

It must still behave like a dimensionalized Suf embroidered field.

Do not add mirrors by default.

Do not let the design look drawn first.

Do not leave humans, animals, trees, or environment generic.

The result must feel like Suf counted embroidery logic has gained image-body across the whole frame.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D realistic dimensional world generated from Suf embroidery of Gujarat.

The realism must remain fully governed by Suf embroidery grammar, not by generic realism.

Build the whole world through:

countable cloth logic,

reverse-side counted construction,

no pre-drawn motif discipline,

triangle-built pattern generation,

surface satin-stitch filling,

balanced symmetrical field order,

and source-faithful mirror restraint.

The world must feel as if Suf embroidery intelligence has become a complete dimensional reality.

Figures, clothing, objects, architecture, surfaces, environment, and spatial divisions must all belong to one Suf system.

The geometry must still feel count-built, not graphically pasted.

The embroidery must still feel stitched, not printed.

The field must still feel mentally generated and structurally precise.

Humans must be rebuilt through angular embroidered segmentation, counted garment-field rhythm, and triangle-based pattern grouping while skin remains clean and human.

Animals must be rebuilt through counted geometric body logic.

Trees must be rebuilt through triangle-clustered foliage fields and embroidered angular massing.

Ground, props, and architecture must all inherit Suf's counted triangular organization.

Make the space fully volumetric and believable, but do not let realism erase the reverse-counted embroidered origin.

This is not normal realism with Suf decoration.

This is Suf grammar becoming world structure.

Avoid:

generic Kutchi embroidery realism,
mirror-heavy styling,
drawn-first motif look,
printed geometry,
surface-only embroidery,
one Suf garment inside a non-Suf world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a full 3D realistic dimensional world generated from Suf embroidery of Gujarat.

Style system that must remain unchanged:

reverse-counted construction,
triangle-built geometry,
countable cloth dependence,
no-pre-drawing discipline,
satin-filled symmetry,
mirror non-core in source-faithful form,
full-frame Suf consistency.

Translate the world like this:

[MAIN SUBJECT / MAIN FIELD] becomes a fully dimensional Suf-governed embroidered presence.

[HUMANS] become volumetric but remain organized through counted angular segmentation, embroidered garment-field order, and triangle-built mass logic.

[ANIMALS] become volumetric but remain shaped by Suf counted geometry.

[TREES / FOLIAGE] become volumetric but remain organized through triangular field clustering and stitched angular order.

[OBJECTS / GROUND / ARCHITECTURE] continue to structure the world through counted embroidery zoning and symmetrical field logic.

[ENVIRONMENT] becomes a believable spatial field organized by Suf intelligence rather than generic realism.

Increase:

full spatial depth,
material presence,
embroidered tactility,
triangle density,
field continuity,
world completion.

Do not lose:

reverse-side counting logic,
triangle-built structure,

countable cloth identity,
mirror non-core rule,
Suf branch purity.

Avoid:

generic ornate embroidery,
mirror shorthand,
printed pattern realism,
drawn-first embroidery,
Suf as accessory instead of world structure.

Image-to-Image

Convert this source image into a full 3D realistic Suf embroidery world from Gujarat.

Preserve the source image's main composition, subject relationships, and readability, but rebuild the whole image through Suf counted-embroidery world grammar.

Replace normal realism with a world governed by countable cloth logic, reverse-side counted construction, no-pre-drawn design discipline, triangle-built pattern generation, satin-filled symmetrical embroidery, and source-faithful mirror restraint.

If the source contains figures, garments, props, objects, architecture, animals, trees, ground, or environment, convert all of them so they behave as if generated from Suf embroidery intelligence.

Keep the geometry count-built and structurally plausible.

Keep the embroidery stitched rather than printed.

Keep the whole frame organized by counted triangular field order rather than generic realistic arrangement.

Do not simply apply geometric embroidery over the image.

Do not leave secondary forms generic.

Do not turn it into generic Kutchi mirror-work realism.

The final result must feel like Suf itself generated the world.
