

Tangaliya - Gujarat

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of Tangaliya from Gujarat as a handwoven raised-dot textile tradition from Surendranagar, rooted in the Dangashiya / Dangasia weaving lineage.

Do not treat this as generic dotted cloth, embroidery, stitched beadwork, printed bead effect, jacquard texture, or decorative fashion fabric.

Build the entire image as if it is generated from real Tangaliya weaving intelligence:

plain-weave cloth ground,
raised bead-like dana dots formed during weaving,
extra-weft thread construction,
geometric dot-field pattern order,
clear tactile contrast between ground and raised dots,
two-sided woven logic,
handmade rhythm,
cloth-use memory,
and structurally integrated pattern rather than surface ornament.

The raised dots must feel woven into the fabric, not stitched later and not printed on top.
The field must feel geometric, distributed, and rhythmically organized rather than randomly speckled.

The cloth must feel tactile, structural, and loom-built.

If figures, animals, trees, props, ground, architecture, or environment are present, rebuild all of them through Tangaliya weave intelligence so the whole frame feels born from dana logic, woven surface contrast, and geometric distribution, not like a normal scene with one Tangaliya shawl inserted later.

Humans must not remain generic realism wearing one dotted garment.

Animals must not remain generic realistic fur or feathers with Tangaliya cloth nearby.

Trees must not remain ordinary foliage.

The whole image must inherit:

raised-dot clustering,
woven field segmentation,
extra-weft rhythm,
and tactile bead-like structure.

Human skin and faces should remain readable and human, not turned into ugly bumps or fake bead surfaces.

The style should enter through garment logic, silhouette grouping, tactile field structure, dot distribution, props, environment, and mass organization.

Avoid:

generic dotted fabric,
embroidery illusion,
printed bead effect,
surface-only styling,
one Tangaliya cloth patch inside a generic world,
architecture carrying the whole style while humans, animals, and trees stay unchanged.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in the authentic visual logic of Tangaliya from Gujarat.

Treat the style as a woven raised-dot textile system built through extra-weft dana formation during weaving, not as generic dotted cloth or embroidery.

Core style lock:

woven dana dots,
plain-weave ground,
extra-weft construction,
geometric dot-field organization,
tactile raised-surface contrast,
two-sided weave logic,
handmade rhythm,
whole-frame Tangaliya consistency.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a Tangaliya-built woven presence with raised dana structure and geometric dot-field order.

[HUMANS] are rebuilt through garment masses, woven banding, tactile dot distribution, and grouped structural segmentation; skin stays clean and human.

[ANIMALS] are rebuilt through dana-cluster markings, woven surface grouping, and geometric tactile segmentation instead of generic realism.

[TREES / FOLIAGE] are rebuilt through clustered woven-dot canopy masses, field rhythm, and tactile distributed structure rather than leaf-by-leaf realism.

[OBJECTS / GROUND / ARCHITECTURE] inherit woven bead-like dot organization, field zoning, and tactile surface logic.

[ENVIRONMENT] becomes organized through Tangaliya weave intelligence rather than generic scenic realism.

Keep:

woven construction memory,
raised dana tactility,

extra-weft identity,
geometric field order,
two-sided cloth logic,
Surendranagar Tangaliya specificity.

Avoid:
generic dotted textile,
stitched beadwork illusion,
printed spots,
surface decoration added afterward,
architecture-only solution,
normal realism with one Tangaliya garment.

Image-to-Image

Convert this source image into the authentic visual world of Tangaliya from Gujarat.

Preserve the source image's main subject relationships, action, and readability, but rebuild the entire image through Tangaliya raised-dot weaving grammar.

Replace ordinary surfaces with handwoven cloth behavior.
Replace decorative texture with dana-built raised-dot structure.
Replace generic dotted pattern with geometric extra-weft field order.
Replace flat surface treatment with tactile contrast between woven ground and raised bead-like dots.

If the source contains people, animals, trees, props, objects, ground, or environment, convert all of them so they feel generated by Tangaliya weaving intelligence instead of remaining normal realism.

Do not simply paste dotted texture onto the image.
Do not leave the environment generic.
Do not make it look like embroidery, beadwork, or printed dotted fabric.

The final image must feel like a real Tangaliya woven system expanded across the whole frame.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image translation rooted in Tangaliya from Gujarat.

This is not generic textured cloth and not a full realistic world yet.

It must remain source-rooted in Tangaliya weaving grammar:

plain-weave ground,
raised dana dots,
extra-weft construction,
geometric dot-field distribution,
tactile contrast,
two-sided woven logic,
and community-rooted cloth intelligence.

Let the image gain dimensional body, layered woven-field depth, stronger tactile contrast between ground and raised dots, richer cloth tactility, and more articulated relation between dot clusters and surrounding woven fields.

But keep the image weave-field-first.

It should still feel like Tangaliya weaving intelligence is constructing the image, not generic realism.

Extend Tangaliya across all elements:

humans are shaped through woven surface grouping, tactile pattern masses, garment-field segmentation, and raised-dot rhythm;

animals are shaped through geometric tactile markings and dana-cluster body organization;

trees are shaped through clustered canopy fields, woven-dot foliage masses, and structured tactile grouping;

props, ground, and architecture are shaped through woven banding, raised-dot zoning, and field rhythm.

Faces and skin stay readable, clean, and human. No fake beaded skin. No stitched-look surfaces.

This version should feel like Tangaliya has gained image-body and spatial presence while remaining loom-built, dana-first, and source-rooted.

Avoid:

embroidery illusion,
printed dot realism,
generic home-textile styling,
decorative dotted surface pasted on top,
architecture-only Tangaliya,
normal realism with one Tangaliya cloth element.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a creative 2D + 3D translation rooted in Tangaliya from Gujarat.

Preserve these source-core rules:

Tangaliya remains woven and dana-built,
raised dots remain structurally integrated,
extra-weft logic remains primary,
geometric field order remains active,
tactile contrast remains visible,
the whole frame remains inside one Tangaliya system.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a dimensionalized Tangaliya woven-image zone.

[HUMANS] are rebuilt through woven banding, raised-dot field logic, tactile grouping, and structural garment rhythm; skin remains clean.

[ANIMALS] are rebuilt through geometric tactile cluster-markings and woven surface segmentation.

[TREES / FOLIAGE] are rebuilt through clustered dot-canopy masses and woven field distribution.

[OBJECTS / GROUND / ARCHITECTURE] gain richer layering but remain dana-woven and structurally organized.

[ENVIRONMENT] becomes a Tangaliya weave-field rather than generic realism.

Let these become richer:

raised-dot layering,
woven-field depth,
cloth tactility,
structural grouping,
image-body,
relation between ground weave and dana pattern.

Keep unchanged:

woven dana identity,
extra-weft memory,
two-sided cloth intelligence,
geometric order,
Tangaliya specificity.

Avoid:

generic dotted textile,
embroidery-look fabric,
printed bead effect,
surface texture transfer only,
architecture carrying the whole solution,
one Tangaliya section inside an unrelated image.

Image-to-Image

Convert this source image into a creative 2D + 3D Tangaliya translation from Gujarat.

Preserve the source image's main action, subject count, and readability, but reconstruct the full image through Tangaliya dana-weave grammar.

Replace ordinary surfaces with woven-ground behavior and raised-dot structure.

Replace decorative texture with extra-weft-built tactile pattern.

Replace generic dotted appearance with geometric dana-field order.

Allow the image to gain layered cloth depth, stronger tactile contrast, richer woven presence, and more visible image-body.

But do not let it become full realism.

It must still behave like a dimensionalized Tangaliya weave-field.

Do not paste dotted texture onto a normal image.

Do not let humans, animals, and trees remain generic.

Do not turn it into embroidery-look fabric styling or premium dotted décor.

The result must feel like Tangaliya weaving logic has gained image-body across the whole frame.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D realistic dimensional world generated from Tangaliya of Gujarat.

The realism must remain fully governed by Tangaliya weaving grammar, not by generic realism.

Build the whole world through:

plain-weave ground,

raised dana dots,

extra-weft construction,

geometric dot-field order,

tactile contrast between woven ground and raised dots,

two-sided woven logic,

and Surendranagar cloth intelligence.

The world must feel as if Tangaliya weaving intelligence has become a complete dimensional reality.

Figures, clothing, objects, architecture, surfaces, environment, and spatial divisions must all belong to one Tangaliya system.

The dots must still feel woven, not stitched and not printed.

The tactile field must still feel loom-built, not surface-decorated.

Geometric distribution and raised-dot contrast must still structure the world.

Make the space fully volumetric and believable, but do not let realism erase the woven origin.

This is not normal realism with Tangaliya motifs.
This is Tangaliya grammar becoming world structure.

Humans must be rebuilt through woven structural grouping, tactile field rhythm, garment logic, and dana distribution while skin remains clean and human.
Animals must be rebuilt through raised-dot tactile markings and geometric woven massing.
Trees must be rebuilt through clustered woven foliage structure and dana-field canopy logic.
Ground, props, and architecture must all inherit Tangaliya woven order.

Avoid:
generic textured textile realism,
embroidery realism,
printed dotted surfaces,
normal realistic world with one Tangaliya cloth inserted,
architecture monopolizing the style,
one Tangaliya garment inside a non-Tangaliya world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a full 3D realistic dimensional world generated from Tangaliya of Gujarat.

Style system that must remain unchanged:
woven dana identity,
extra-weft construction logic,
raised tactile dots,
geometric field order,
two-sided weave intelligence,
full-frame Tangaliya consistency.

Translate the world like this:
[MAIN SUBJECT / MAIN FIELD] becomes a fully dimensional Tangaliya-governed woven presence.
[HUMANS] become volumetric but remain organized through garment-field rhythm, tactile raised-dot grouping, and woven structural order.
[ANIMALS] become volumetric but remain shaped by dana-cluster markings and geometric tactile segmentation.
[TREES / FOLIAGE] become volumetric but remain organized through clustered woven-dot canopy masses and field distribution.
[OBJECTS / GROUND / ARCHITECTURE] continue to structure the world through Tangaliya banding, raised-dot zoning, and woven tactile order.
[ENVIRONMENT] becomes a believable spatial field organized by Tangaliya cloth intelligence rather than generic realism.

Increase:
full spatial depth,

material presence,
woven tactility,
raised-dot contrast,
field continuity,
world completion.

Do not lose:
dana weave logic,
extra-weft identity,
tactile raised-dot behavior,
geometric order,
two-sided cloth intelligence,
Tangaliya world-logic.

Avoid:
generic realistic textile décor,
embroidery-like realism,
printed bead effect,
surface-only styling,
architecture-only solution,
Tangaliya as accessory instead of world structure.

Image-to-Image

Convert this source image into a full 3D realistic Tangaliya world from Gujarat.

Preserve the source image's main composition, subject relationships, and readability, but rebuild the whole image through Tangaliya woven-world grammar.

Replace normal realism with a world governed by plain-weave cloth logic, raised dana dots, extra-weft construction, geometric dot-field order, tactile contrast, and two-sided woven intelligence.

If the source contains figures, garments, props, objects, architecture, trees, animals, ground, or environment, convert all of them so they behave as if generated from Tangaliya weaving intelligence.

Keep the dots weave-built and structurally plausible.
Keep the tactile contrast between ground and dana active.
Keep the whole frame organized by woven field order rather than generic realistic arrangement.

Do not simply apply dotted texture over the image.
Do not leave the environment or secondary forms generic.
Do not turn it into embroidery-look realism or generic dotted-fabric luxury.

The final result must feel like Tangaliya itself generated the world.
