

Agra marble inlay - Uttar Pradesh

if translated beyond textile

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Agra Marble Inlay from Uttar Pradesh**, treating it as an **Agra-rooted stone inlay system** built through **engraved marble or stone bases, hand-cut semi-precious stone fitting, pietra dura / parchin kari ornamental grammar, Mughal floral–geometric–arabesque design intelligence, and flush polished hard-surface refinement**.

Build the image as if it genuinely belongs inside the native Agra inlay tradition itself. The image must be governed first by **hard polished stone-surface identity, engraved cavity logic, exact fitted-stone precision, flush-set smoothness, and Mughal ornamental order**, not by painted marble decoration, mosaic assembly, relief carving, printed stone patterning, or generic luxury Taj-inspired styling.

The base must feel like real marble or stone, dense, cool, polished, and materially authoritative. The ornament must feel built by first cutting cavities into the stone and then fitting precisely cut colored or semi-precious stone pieces into those cavities. The result must feel **seamless, flush, exact, and polished into one continuous surface**, not raised above the base and not loosely assembled like mosaic.

The motif world must remain **Mughal and Agra-rooted**: flowers, leaves, stems, vines, arabesques, geometric systems, border structures, panel order, and surface-balanced ornamental refinement. These motifs must feel designed for hard-surface inlay, not painted freely like illustration. The image should preserve a sense of architectural memory even when translated to object scale.

Color must come from **inserted stone against pale stone**, not from pigment. The visual richness must come from hard-material contrast, contour precision, and polished finish. The final result must feel like **the real Agra marble inlay system itself made the whole image**.

Reusable Variable Template

Create [SUBJECT / INLAID STONE SURFACE / MARBLE PANEL / AGRA PIETRA-DURA WORLD] in the **pure authentic source-truth visual logic of Agra Marble Inlay from Uttar Pradesh**.

Style system that must remain unchanged:

- hard-surface base identity
- engraved-cavity construction
- precision-fitted inlay logic
- flush polished surface order
- material contrast through inserted stone
- Mughal floral–geometric–arabesque ornamental grammar
- architectural-memory refinement
- whole-frame Agra inlay consistency

Translate the image like this:

- **[MAIN STONE FIELD / MAIN PANEL / MAIN OBJECT FACE]** becomes an Agra-built inlay surface governed by engraved-and-fitted stone logic
- **[INSERTED STONE SHAPES / COLORED STONE ELEMENTS / SEMI-PRECIOUS FORMS]** must feel hand-cut, contour-precise, and exactly fitted into the base
- **[FLOWERS / LEAVES / STEMS / ARABESQUES / GEOMETRIC STRUCTURES / BORDER BANDS]** must feel inlay-born, not painted, printed, or carved in relief
- **[SURFACE FINISH / POLISH / FLUSH CONTINUITY]** must feel smooth, dense, finished, and physically believable
- **[PANEL ORDER / BORDER STRUCTURE / SYMMETRY / OBJECT ZONES]** must feel compositionally necessary and Agra-rooted
- **[IF FIGURES / OBJECTS / ARCHITECTURE APPEAR]** faces, bodies, posture, object logic, and environment logic must all be reorganized through Agra inlay surface intelligence, not realism

Keep:

- engraved-fit-polish logic
- white or pale stone authority
- colored stone contrast
- Mughal ornamental discipline
- hard-surface precision
- architectural-memory order
- Agra refinement
- whole-frame consistency

Avoid:

- painted marble
- mosaic-like chunkiness
- relief carving
- printed stone decoration
- generic luxury souvenir styling
- over-textured roughness
- generic floral marble pattern
- realism with Agra inlay accents added later

The final result must feel like a true Agra stone-inlay system, not a marble object wearing decorative motifs.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Agra Marble Inlay from Uttar Pradesh**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through Agra inlay grammar. Replace generic decoration with engraved-cavity stone construction. Replace paint-like surface behavior with fitted semi-precious inlay. Replace loose visual ornament with contour-precise floral–geometric–arabesque Mughal order. Replace rough or generic surface treatment with flush polished stone refinement.

If the image includes motifs, make them feel cut from colored stone and embedded into a pale stone base. If the image includes panel zones, borders, or object surfaces, make them behave like real inlaid marble or stone. If the image includes figures, objects, or environment, they must also be reorganized through Agra inlay logic rather than remain generic underneath an inlay patch.

Do not simply add floral stone motifs onto marble. Do not keep painted or printed logic underneath. Do not let the image behave like mosaic or carving. The final result must feel as if the original image has been fully reauthored inside the true source-truth Agra marble inlay system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic dimensional translation of Agra Marble Inlay from Uttar Pradesh**, preserving the same deep source grammar as the authentic source-truth version, but translating it into a **richer, more dimensional, more image-complete inlay world while staying fully inlay-born**.

Keep the core Agra marble inlay grammar fully unchanged: hard-surface base identity, engraved-cavity construction, precision-fitted inlay logic, flush polished surface order, material contrast through inserted stone, Mughal floral–geometric–arabesque ornamental grammar, and architectural-memory refinement. Do not turn this into luxury marble concept art, decorative stone illustration, painted pietra-dura simulation, mosaic glamour, or generic Taj-style décor styling.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal tabletop, tray, tile, or panel documentation, but it must also not become full generic realism-world depth. It should become a **creative hybrid hard-surface inlay world** where Agra's own engraved-fit-polish intelligence generates richer form, clearer structure, and more dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and relations must all be rebuilt through Agra inlay logic. If objects appear, they must be shaped through hard-surface panel order, floral–geometric contour discipline, and inserted-stone contrast. If environment appears, it must grow from inlay-born surface intelligence and architectural-memory structure rather than remain generic. The inlay system must become the larger organizing intelligence, not just decorative ornament on top.

Dimensionality must come from Agra marble inlay itself: from engraved cavity structure, exact cut-and-fit precision, polished contrast between base and insert, Mughal ornamental spread, border discipline, and surface-plane intelligence. Do not solve dimensionality through painterly shading, generic luxury rendering, or realism with one pietra-dura patch added later.

Do not create:

luxury marble concept art, decorative stone render, painted inlay effect, mosaic-style beautification, or a generic dimensional image decorated later by Agra marble inlay.

The final result must feel like **the same Agra marble inlay grammar has entered a richer, more dimensional inlay world without losing precision-fitted identity.**

Reusable Variable Template

Create **[SUBJECT / IMAGE / INLAY WORLD / AGRA STONE-SURFACE SYSTEM]** in the **authentic dimensional translation of Agra Marble Inlay from Uttar Pradesh.**

Keep unchanged:

- hard-surface base identity
- engraved-cavity construction
- precision-fitted inlay logic
- flush polished surface order
- material contrast through inserted stone
- Mughal floral–geometric–arabesque ornamental grammar
- architectural-memory refinement
- whole-frame style consistency

Translate it into a richer dimensional inlay world like this:

- **[MAIN STONE FIELD / MAIN PANEL / MAIN OBJECT FACE / MAIN SURFACE MASS]** becomes an Agra-built inlay presence with more dimensional life, but still governed by engraved-and-fitted stone order
- **[SECONDARY FIELDS / BORDER ZONES / TILE PANELS / BOX SURFACES / TABLETOP REGIONS]** also transform through the same Agra grammar rather than generic styling
- **[FITTED STONE CONTRAST / CONTOUR PRECISION / POLISH / PANEL HIERARCHY / ORNAMENTAL RHYTHM]** become more spatially alive and structurally expressive while remaining inlay-born
- **[FLORAL / LEAF / STEM / ARABESQUE / GEOMETRIC / BORDER SYSTEMS]** must remain Mughal, disciplined, and hard-surface-native
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, object logic, and environment logic must all be rebuilt through Agra inlay order
- **[IF ENVIRONMENT APPEARS]** it must grow from engraved-fit-polish intelligence and architectural-memory logic rather than generic realism

Increase:

- dimensional presence
- contour hierarchy clarity
- material contrast legibility
- visual richness
- structural precision
- whole-frame transformation
- inlay-world depth

Do not use:

- painted marble logic
- mosaic chunkiness
- relief-carving behavior
- generic luxury rendering
- generic environment with Agra overlay
- only one inlaid patch carrying the style
- generic Taj-souvenir styling
- decorative stone glamor replacing fit precision

Success condition:

the result feels like the same Agra marble inlay grammar has been translated into a richer dimensional inlay world.

Failure condition:

the result feels like a generic decorative image decorated later by Agra marble inlay.

Image-to-Image

Convert this source image into the **authentic dimensional translation of Agra Marble Inlay from Uttar Pradesh**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through Agra marble inlay's internal grammar translated into a richer, more dimensional inlay-born world.

Replace generic ornament with engraved-and-fitted stone construction. Replace paint-like or printed surface behavior with real material contrast between pale stone and inserted colored stone. Replace loose decorative florals with contour-precise Mughal floral–geometric–arabesque order. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through Agra inlay logic, not realism. If objects or environment are present, they must also be rebuilt through hard-surface precision and polished inlay contrast instead of remaining generic.

Let the image gain more dimensional life, stronger contour hierarchy, richer material presence, and better whole-frame coherence. But do not turn it into luxury marble illustration, painted pietra-dura styling, or generic décor with inlay added afterward.

Do not style only one tabletop center, one tray face, one tile patch, or one box lid. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through an authentic dimensional translation of Agra marble inlay**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **world-depth translation of Agra Marble Inlay from Uttar Pradesh**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable full world**.

Keep the same deep Agra marble inlay visual intelligence fully unchanged: hard-surface base identity, engraved-cavity construction, precision-fitted inlay logic, flush polished surface order, material contrast through inserted stone, Mughal floral–geometric–arabesque ornamental grammar, and architectural-memory refinement. Do not turn this into generic realism, luxury-stone realism, palace realism, or a normal world with one inlaid table, tile, tray, or box added on top.

Now convert that same grammar into a believable full world. The result must have believable material behavior, believable spatial separation, believable object presence, believable environmental completion, and believable three-dimensional world logic. But every visible part of the image must still be generated by Agra inlay grammar.

If figures are present, they must be rebuilt through Agra-born hard-surface inlay structure, not normal realism wearing or standing near decorative marble. If objects appear, they must be shaped through engraved-fit-polish order, contour precision, and inserted-stone contrast. If environment appears, it must be generated by floral–geometric–arabesque inlay logic, panel discipline, polished hard-surface hierarchy, and architectural-memory refinement. The world must not become ordinary reality with one Agra inlay insert into it.

Depth must now become full world-depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in one tabletop, one tray, one tile, one panel, one box, or one marble patch. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **Agra marble inlay itself has become a believable full world**.

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED AGRA INLAY WORLD]** in the **world-depth translation of Agra Marble Inlay from Uttar Pradesh**.

Keep unchanged:

- hard-surface base identity
- engraved-cavity construction
- precision-fitted inlay logic
- flush polished surface order
- material contrast through inserted stone
- Mughal floral–geometric–arabesque ornamental grammar
- architectural-memory refinement
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN PANEL / MAIN INLAID SURFACE MASS]** becomes a fully embodied Agra-built presence with believable inlay-world logic
- **[SECONDARY FORMS / SUPPORT FIELDS / BORDER ZONES / OBJECT SURFACES]** also remain under the same Agra-born logic
- **[ENGRAVED ORDER / FIT PRECISION / POLISH / MATERIAL CONTRAST / ORNAMENTAL HIERARCHY]** become world-organizing elements still governed by hard-surface inlay structure
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by Agra marble inlay intelligence rather than generic realism
- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, object logic, and environment logic must all remain Agra-born, not realism-first

Increase:

- full world embodiment
- spatial separation
- object presence
- environmental orchestration
- fit-to-world transformation
- contour readability
- whole-frame coherence

Do not lose:

- hard-surface identity
- engraved-fit-polish logic
- flush-set precision
- inserted-stone contrast
- Mughal ornamental discipline
- panel order
- Agra refinement
- whole-frame Agra identity

Do not use:

- realistic world with one inlaid object
- generic cinematic luxury-stone scene
- style-as-marble patch only
- style-as-floral motif only
- style-as-decoration only
- style-as-surface ornament only
- premium finish overpowering inlay structure
- reality with Agra flavor added later

Success condition:

the result feels like Agra marble inlay itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with Agra marble inlay.

Image-to-Image

Convert this source image into the **world-depth translation of Agra Marble Inlay from Uttar Pradesh**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through Agra marble inlay's source grammar translated into **full world-depth**.

Replace generic forms with Agra-built inlay-world presences. Replace ordinary surfaces with engraved-and-fitted hard-surface construction. Replace generic decorative order with Mughal floral–geometric–arabesque hierarchy, panel intelligence, inserted-stone contrast, and polished contour precision. Replace realism-first staging with Agra-born inlay-world order. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through Agra marble inlay grammar, not realism.

Allow the result to gain complete material embodiment, stronger spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with Agra marble inlay added later. The whole world must remain Agra-born.

Do not stylize only one tray face, one tabletop center, one tile, one marble box, one border, or one inlaid patch while leaving the rest of the world generic. Do not make it a realism scene with an inlay insert. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable full world generated by Agra marble inlay itself.**
