

# Rock Garden assemblage - Chandigarh

## V1 — Authentic Style

### Universal Hard Prompt

Create a fully self-contained scene in the authentic visual grammar of Chandigarh Rock Garden assemblage.

The entire visible world must be built as a handmade salvage-born environment made from broken tiles, crockery shards, ceramic fragments, bottle pieces, bangles, stone fragments, rough concrete binding, and embedded discarded materials. Do not treat these as decoration. They must be the actual body logic of the scene.

Everything in the frame must belong to one continuous assemblage system: figures, animals if present, walls, pathways, courtyards, terraces, niches, small structures, thresholds, and background forms. The world should feel like a hand-built fantasy village-kingdom discovered inside a sculptural maze, with narrow passages opening into courts, clustered handmade figures, rough mosaic-encrusted surfaces, irregular tactile edges, and dense accumulative construction.

Use simplified but strongly readable forms, iconic handmade bodies, repeated clusters, rough concrete-and-fragment surfaces, embedded material texture, spatial sequencing through walls and passages, and a slightly mythic lost-kingdom atmosphere. Preserve the native handmade roughness and salvaged-material truth. Do not make it polished, luxurious, sleek, or generically realistic. Do not leave any neutral background or ordinary modern world underneath. No decorative overlay logic. The whole frame must be born from assemblage.

### Reusable Variable Template

Create [subject / scene] in the authentic visual grammar of Chandigarh Rock Garden assemblage.

The full scene must be built as a handmade salvage-born environment using broken tiles, crockery shards, ceramic fragments, bottle pieces, bangles, stone fragments, and rough concrete binding as the actual body logic of all visible forms.

Show [main action / situation]. Include [secondary figures / animals / structures] if needed. Build the setting as [pathway / courtyard / terrace / narrow passage / clustered court / fantasy village pocket / sculptural threshold], with everything made from the same fragment-built assemblage grammar.

Use simplified handmade forms, iconic readable silhouettes, repeated clusters, dense tactile surfaces, rough encrusted walls, irregular embedded fragments, and strong figure-environment unity. Make the world feel like a lost handmade kingdom of salvage-built sculpture and space, not like a normal realistic environment.

Keep the image raw, native, aggregate, and handmade. Do not make it polished, minimal, premium, sleek, photoreal, or decorative-only. No generic background, no neutral architecture, no normal human anatomy under styled texture, no single styled object inside a normal world.

## **Image-to-Image**

Use the input image only for scene identity, subject placement, pose relationships, and basic action. Rebuild the entire visible frame in the authentic visual grammar of Chandigarh Rock Garden assemblage.

Transform all subjects, objects, ground planes, walls, pathways, structures, and background elements into a unified handmade salvage-built environment made from broken tiles, crockery shards, ceramic fragments, bottle pieces, bangles, stone fragments, and rough concrete binding. The source image must not remain realistic underneath. Every visible form must become assemblage-born.

Preserve the original scene logic, but change the full image-making system: simplified handmade figure construction, rough mosaic-encrusted surfaces, clustered sculptural presence, irregular tactile edges, embedded fragment skin, passage-to-courtyard spatial logic, and a fantasy village-kingdom atmosphere.

Do not apply texture only. Do not leave background realistic. Do not keep normal anatomy with decorative mosaic pasted on top. Do not stylize only one object. The entire frame must become a native Rock Garden assemblage world.

## **V2 — Artisan Translation**

### **Universal Hard Prompt**

Create a fully self-contained scene in the visual grammar of Chandigarh Rock Garden assemblage, translated into richer dimensional form while staying completely faithful to the source system.

The entire visible world must still be built from salvaged fragments, broken tiles, crockery shards, ceramic pieces, bottle fragments, bangles, stone pieces, and rough concrete binding. These materials must form the bodies of figures, walls, pathways, terraces, niches, structures, and background space. Nothing should feel designed first and decorated later.

Increase dimensional readability, spatial layering, tactile form separation, body volume, environmental depth, passage-to-courtyard transition, and the inhabitable quality of the assemblage world. Let the scene feel more complete and spatially believable, but still handmade, rough, aggregate, irregular, and fragment-built. The style must remain fully born from the Rock Garden assemblage grammar.

Use stronger foreground-midground-background organization, clearer sculptural mass, more legible environmental continuity, and richer clustered spatial ecology. Do not become polished artisan décor, premium mosaic design, generic realism, or decorative upgrade. Do not smooth the materials. Do not leave any neutral world underneath. Everything visible must still belong to the same salvage-built assemblage civilization.

## **Reusable Variable Template**

Create [subject / scene] in Chandigarh Rock Garden assemblage visual grammar, translated into richer dimensional form without leaving the source system.

Build the entire scene from salvaged fragments, broken tiles, ceramic shards, crockery pieces, bottle fragments, bangles, stone, and rough concrete binding as the real body logic of all forms. Show [main action / event] inside [environment type: passage / courtyard / terrace / clustered court / sculptural settlement / threshold zone].

Increase depth, tactile separation, body volume, and environmental continuity compared to a native source-truth version, but keep everything fragment-built, handmade, irregular, rough, and aggregate. Let figures, structures, and background belong to one continuous assemblage world.

Use stronger layering, clearer sculptural space, more believable inhabitable world logic, and full figure-environment unity. Do not make it polished, luxurious, premium, sleek, photoreal, or decorative-only. Do not leave any generic architecture, plain landscape, or normal anatomy underneath.

## **Image-to-Image**

Use the input image only for scene identity, composition, subject placement, action, and camera relationship. Rebuild the full frame in Chandigarh Rock Garden assemblage grammar with richer dimensional translation.

Transform all visible elements into a unified salvage-built assemblage world made from broken tiles, crockery shards, ceramic fragments, bottle pieces, bangles, stone fragments, and rough concrete binding. Increase volumetric readability, sculptural depth, tactile separation, layered spatial continuity, and inhabitable passage-to-courtyard world logic, while keeping the entire image handmade, rough, and fragment-built.

The source image must not remain realistic under the style. Subjects, objects, walls, ground, structures, and background must all become part of one continuous assemblage system. Do not apply surface texture only. Do not create luxury mosaic styling. Do not produce polished artisan décor. Do not keep a generic realistic world with styled accents.

## V3 — 3D / Realistic / Cinematic Translation

### Universal Hard Prompt

Create a fully self-contained complete world in the visual grammar of Chandigarh Rock Garden assemblage, translated into a believable full-world environment where every visible form belongs to the same salvage-built style system.

The scene must feel like an inhabitable assemblage civilization: figures, animals if present, pathways, walls, terraces, courts, steps, niches, small structures, thresholds, clustered environments, and distant background forms all built from broken tiles, crockery shards, ceramic fragments, bottle pieces, bangles, stone fragments, and rough concrete binding. These materials are not decoration; they are the actual construction logic of the entire world.

Build a complete spatial ecology with foreground, midground, background, transitions, density shifts, narrow passages opening into courtyards, clustered sculptural populations, and a fantasy lost-kingdom atmosphere. The world must feel fully continuous and believable from front to back, with no generic realism left anywhere. All bodies, objects, architecture, and environment must be style-born.

Let the image feel complete, immersive, and world-scale, but never polished into normal realism. Keep rough handmade irregularity, aggregate fragment construction, embedded mosaic skin, and salvage-built material truth in every visible part of the frame. Do not create one styled sculpture inside a normal world. Do not leave background, sky treatment, architecture, or human anatomy outside the style system. This must be a total assemblage world.

### Reusable Variable Template

Create [subject / event / environment] as a full believable world in Chandigarh Rock Garden assemblage visual grammar.

The entire visible frame must become a continuous salvage-built assemblage civilization made from broken tiles, crockery shards, ceramic fragments, bottle pieces, bangles, stone fragments, and rough concrete binding. Show [main action] with [subject count / roles], inside [environment type], but make every visible part of the world style-born: bodies, structures, walls, passages, courtyards, terraces, thresholds, and distant background.

Build complete world continuity from foreground to horizon with clustered sculptural life, rough encrusted surfaces, layered spatial ecology, passage-to-courtyard transitions, and fantasy village-kingdom atmosphere. The result must feel believable and complete, but never generic-realistic.

No decorative overlay, no premium mosaic finish, no normal architecture, no normal human skin or anatomy under surface styling, no ordinary background, no single styled object inside a realistic frame. Every visible form must belong to one continuous assemblage world.

## **Image-to-Image**

Use the input image only as a guide for scene identity, subject placement, action, and broad composition. Rebuild the entire frame as a believable full-world Chandigarh Rock Garden assemblage environment.

Transform every visible element into a continuous salvage-built world made from broken tiles, ceramic shards, crockery pieces, bottle fragments, bangles, stone fragments, and rough concrete binding. Convert subjects, clothing-equivalents, props, walls, pathways, structures, vegetation-equivalents if present, background space, and distant forms into one unified assemblage civilization. Preserve scene meaning, but replace the whole image-making logic.

The final result must feel like a complete inhabitable lost-kingdom world of clustered figures, rough embedded fragment surfaces, sculptural pathways, courtyards, terraces, thresholds, and handmade irregular spatial continuity. Do not stylize one patch only. Do not keep background realistic. Do not preserve normal materials under the style. Do not produce generic realism with one assemblage insert. The whole world must obey the same Rock Garden assemblage grammar.
