

cane / bamboo - Andaman & Nicobar

V1 — Authentic Style

Universal Hard Prompt

Create a fully self-contained handcrafted object image in the pure authentic source-truth visual grammar of cane and bamboo craft from Andaman & Nicobar.

Build the object from real cane and bamboo construction logic. The result must feel construction-born, not surface-styled. Use actual strip logic, sliver logic, bent member logic, frame logic, woven field logic, wrapped edge logic, and join logic as the primary generators of form.

Use natural plant-material identity:

light bamboo yellow, straw, beige, warm honey, pale brown, natural cane tone, lightly polished or smoothed handmade surface, visible structural rhythm, visible strip direction, visible weave density, visible frame support, visible handmade order.

Keep the object close to real source behavior: basket, tray, lampshade, stool, utility object, decorative-functional article, or another believable cane/bamboo handmade form from an island handicraft ecosystem. Prioritize real construction pattern, natural material truth, lightweight but structured object presence, and neat handcrafted finish.

The surface must come from actual construction pattern, not from painted ornament. The silhouette must come from weaving, bending, framing, or joining, not from generic furniture styling. Keep the result source-faithful, materially honest, and object-first.

Do not make it plastic rattan, generic wicker décor, tropical resort furniture, boho interior styling, wood carving, shell craft, coconut-shell craft, resin object, lifestyle product render, or a normal object with bamboo texture added later.

Reusable Variable Template

Create [OBJECT / OBJECT-GROUP / DECORATIVE-FUNCTIONAL ARTICLE] in the pure authentic source-truth visual grammar of cane and bamboo craft from Andaman & Nicobar.

Build the full result through real cane/bamboo construction:

split strips,
slivers,
bent members,
woven sections,
frame supports,

wrapped edges,
join points,
natural plant-material tone,
lightweight but structured handmade object presence.

Show [MAIN OBJECT PURPOSE / USE / ARRANGEMENT]. Let the object feel genuinely built from cane and bamboo, not merely styled to look natural. Use visible construction rhythm as the main surface language: strip spacing, interlacement, weave density, ribbing, frame geometry, bend arcs, and handmade structural order.

Keep it source-faithful, construction-first, natural-material-first, and island-handicraft-rooted. The result should feel like a real handcrafted cane/bamboo object from local artisan practice.

Do not turn it into generic wicker, beach-resort décor, luxury eco-product, wooden object with bamboo color, plastic outdoor furniture, or a normal object with woven texture pasted on top.

Image-to-Image

Use the input image only for object identity, broad silhouette intention, placement, and function. Rebuild the full result in the pure authentic source-truth visual grammar of cane and bamboo craft from Andaman & Nicobar.

Transform the entire object into real cane/bamboo construction logic:

split-strip structure,
woven or framed body,
bent member support,
wrapped or reinforced edges,
visible join intelligence,
natural plant-material tones,
lightweight but handmade object presence,
surface created by construction pattern itself.

Preserve the broad object purpose, but replace the full material and form system with true cane/bamboo craft behavior. The result must feel like a real island handmade object, not a generic product restyled on the surface.

Do not apply bamboo texture only. Do not keep generic furniture logic, plastic-rattan logic, wooden object logic, shell-craft logic, or lifestyle décor logic underneath. The object must become construction-born through cane/bamboo grammar.

V2 — Artisan Translation

Universal Hard Prompt

Create a fully self-contained handcrafted object image in the authentic handcrafted dimensional translation of cane and bamboo craft from Andaman & Nicobar.

Do not treat this as generic 3D uplift. Keep the same source grammar intact and deepen it through richer handcrafted object-depth. The result must still be built by real strip logic, weave logic, frame logic, bend logic, wrap logic, and join logic, but with stronger object presence, stronger tactile readability, clearer structural layering, and more dimensional handcrafted embodiment.

Use natural cane/bamboo material identity:

beige, straw, light honey, pale brown, bamboo yellow, smooth but natural plant surface, visible strip rhythm, visible weave depth, visible structural members, and clear handmade finish.

Increase dimensional object clarity through:

better edge readability,
clearer member spacing,
deeper weave relief,
stronger frame-to-surface relation,
clearer front/mid/back structural separation,
more believable join behavior,
and more tactile objecthood.

The object must still feel like artisans expanded the same cane/bamboo system, not like a designer turned it into premium décor. Keep it source-rooted, construction-first, and materially honest.

Do not make it showroom furniture, luxury eco-homeware, plastic-rattan realism, generic handcrafted prettiness, or a normal product with woven styling added after the fact.

Reusable Variable Template

Create [OBJECT / OBJECT-GROUP / CONSTRUCTION-BASED ARTICLE] in the authentic handcrafted dimensional translation of cane and bamboo craft from Andaman & Nicobar.

Build the full result through the same source construction grammar:

split strips,
slivers,
woven fields,
bent members,
frame supports,
wrapped edges,
join logic,
natural plant-material tones,
and lightweight but structured object presence.

Show [MAIN OBJECT PURPOSE / USE / ARRANGEMENT], but deepen the result through stronger structural readability, richer weave relief, clearer member hierarchy, stronger edge articulation, and more tactile handcrafted object-depth.

The object must still feel artisan-built from cane and bamboo, not premium-commercial, not lifestyle-branded, and not generic 3D. The dimensionality must come from real construction behavior, not from decorative rendering tricks.

Do not turn it into upscale tropical décor, glossy furniture render, wood-like object logic, plastic wicker, or realism with cane/bamboo cues pasted later.

Image-to-Image

Use the input image only for object identity, arrangement, scale intention, and broad composition. Rebuild the full result in the authentic handcrafted dimensional translation of cane and bamboo craft from Andaman & Nicobar.

Transform all important visible parts into true cane/bamboo construction logic:

- split-strip structure,
- woven depth,
- bent frame members,
- wrapped edges,
- join points,
- natural plant-material surface,
- lightweight structural clarity,
- and handmade dimensional object presence.

Increase tactile depth, structural layering, weave relief, and frame readability while keeping the exact same source grammar unchanged. The final result must feel like a richer artisan-built cane/bamboo object, not a generic furniture render.

Do not apply woven texture only. Do not keep normal product logic underneath. Do not make it plastic outdoor furniture, luxury décor, resort styling, or a generic handcrafted object with bamboo cues added later.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a fully self-contained complete world in the fully resolved believable dimensional-world translation of cane and bamboo craft from Andaman & Nicobar.

This is not a cinematic makeover and not generic realism with bamboo accents. Keep the same source construction grammar unchanged:

split strips,
woven fields,
bent members,
frame supports,
wrapped edges,
join logic,
natural plant-material tones,
lightweight but structured object intelligence,
and construction-generated surface language.

Build a fully resolved cane/bamboo object-ecosystem or expanded world where every important visible form still obeys the same grammar. Increase world completion, structural depth, object presence, material believability, near-to-far clarity, and readable light on construction, but do not introduce a second visual language.

The entire result must feel as if cane/bamboo craft itself has become a believable complete dimensional world. All important visible elements must still feel construction-born: object bodies, support structures, rims, woven zones, secondary forms, and broader environment if present.

Do not create tropical resort interiors, luxury eco-lifestyle spaces, plastic-rattan realism, generic wicker furniture worlds, or normal realism with selected cane/bamboo objects inserted into it.

Reusable Variable Template

Create [OBJECT / OBJECT-ECOSYSTEM / CONSTRUCTION-BASED WORLD / EXPANDED CRAFT SCENE] in the fully resolved believable dimensional-world translation of cane and bamboo craft from Andaman & Nicobar.

The full result must remain governed by one cane/bamboo construction system:

split strips,
woven surfaces,
bent members,
frame logic,
join logic,
wrapped edges,
natural beige-straw-honey palette,
lightweight structural presence,
and decorative-functional craft intelligence.

Show [MAIN OBJECT PURPOSE / ARRANGEMENT / SCENE CONDITION / WORLD CONDITION], but make every important visible form belong to the same cane/bamboo grammar. Increase full-world consistency, structural depth, near/mid/far readability, object

presence, and material believability compared to V2 while keeping the same source style-core unchanged.

Do not make it tropical interior realism, premium furniture mood, lifestyle branding, plastic wicker, or a generic realistic world with cane/bamboo cues added later.

Image-to-Image

Use the input image only for object identity, arrangement, broad world structure, and scene readability. Rebuild the entire result as a fully resolved believable dimensional world in cane and bamboo craft grammar from Andaman & Nicobar.

Transform every important visible form into one continuous construction-born system:

split-strip bodies,
woven surfaces,
bent members,
frame supports,
wrapped rims,
join intelligence,
natural plant-material tones,
lightweight but structured form,
and surface created by construction pattern itself.

Preserve the broad scene meaning, but replace the full image-making system so the entire result belongs to cane/bamboo craft logic. The final image must feel like the craft itself has become fully real and fully complete without changing into another style.

Do not stylize one object only. Do not keep generic realism underneath. Do not make a resort or lifestyle world and decorate it with bamboo later. Do not introduce plastic wicker, luxury furniture polish, or generic tropical mood as the main visual language.
