V1 — Authentic Style

Universal Hard Prompt

Create a fully self-contained handcrafted object image in the pure authentic source-truth visual grammar of Terracotta craft from Puducherry.

Build the object from real clay-to-fired-earth logic. The result must feel clay-born and terracotta-born, not color-styled. Use shaped clay mass, contour-led object form, fired-earth surface, warm earthen red to orange-red to brown-red terracotta tones, matte or softly burnished finish, slightly porous fired-clay texture, and handmade object completion as the primary generators of the image.

Keep the object close to true source behavior: art-pottery vessel, terracotta toy, figurine, or another believable fired-earth handcrafted object from the Puducherry terracotta branch. The object should feel compact or medium-scale, materially grounded, hand-shaped, fired, and object-readable. Let form come from clay mass, pottery profile, figurine contour, and fired-earth object logic, not from surface decoration added later.

Use only simple secondary detailing such as light incised lines, subtle relief shaping, or contour refinement if needed, but keep the clay body stronger than decoration. The surface should still feel earthy, fired, and handmade, not glossy ceramic, painted plaster, cement, resin, or plastic.

Do not make it generic rustic décor, cement object painted terracotta red, glossy showroom ceramics, lifestyle homeware styling, generic pottery from anywhere, or a normal object with terracotta color added later.

Reusable Variable Template

Create [OBJECT / OBJECT-GROUP / POTTERY FORM / TOY / FIGURINE / FIRED-EARTH ARTICLE] in the pure authentic source-truth visual grammar of Terracotta craft from Puducherry.

The full result must be built from real fired-clay object logic:

clay body,
shaped volume,
contour-led silhouette,
fired-earth surface,
warm terracotta material tones,
matte or softly burnished finish,

slight earthen porosity,
handmade object completion.

Show [MAIN OBJECT PURPOSE / FIGURE TYPE / ARRANGEMENT / DISPLAY OR USE CONDITION]. Keep the result source-faithful, clay-born, fired, and object-first. Let the form come from pottery profile, vessel body, toy form, figurine mass, or another believable terracotta object logic. The object should feel like a real handmade fired-earth article from Puducherry's terracotta / art-pottery branch.

If detail is needed, use contour refinement, light incision, subtle relief, or shape clarification, but keep the earthen object body stronger than decorative treatment.

Do not turn it into glossy ceramic ware, plaster imitation, cement casting, generic rustic décor, luxury home styling, or a normal object with terracotta paint or terracotta color added later.

Image-to-Image

Use the input image only for object identity, broad silhouette intention, arrangement, and function. Rebuild the full result in the pure authentic source-truth visual grammar of Terracotta craft from Puducherry.

Transform the entire object so it feels physically made from shaped clay that has been fired into terracotta. Replace the full material and form system with true fired-earth behavior:

clay-born volume,
contour-led object form,
pottery or toy / figurine readability,
warm terracotta red and brown earthen tones,
matte or softly burnished surface,
slight fired-clay porosity,
and handmade object completion.

Preserve the broad object role, but make the result feel like a real terracotta or art-pottery object from Puducherry, not a generic product made to look earthen.

Do not apply terracotta color only. Do not keep plaster, cement, resin, glossy ceramic, shell, bamboo/cane, wood, or generic product logic underneath. The object must become clay-born and fired-earth true in its structure, contour, and material behavior.

V2 — Artisan Translation

Universal Hard Prompt

Create a fully self-contained handcrafted object image in the authentic handcrafted dimensional translation of Terracotta craft from Puducherry.

Do not treat this as generic 3D uplift. Keep the same source terracotta grammar intact and deepen it through richer handcrafted object-depth. The result must still be built from clay-born volume, contour-led form, fired-earth surface, pottery / toy / figurine-capable object logic, and warm terracotta material identity, but now with stronger tactile presence, clearer mass separation, more readable fired contour, and more embodied handcrafted objecthood.

Use real terracotta behavior:

shaped clay mass,
fired-earthen body,
warm red to orange-red to brown-red tones,
matte or softly burnished finish,
slight porosity,
clear silhouette,
and handmade fired-object presence.

Increase dimensional readability through stronger relief, more believable thickness, clearer form transitions, stronger edge definition, deeper mass hierarchy, and better foreground/midground object clarity, but only through fired-earth logic. It should feel like skilled Puducherry artisans expanded the same terracotta branch into richer object embodiment, not like a showroom ceramic render.

Do not make it glossy luxury pottery, designer homeware, cement imitation, generic sculpture render, or realism-first décor styling with terracotta color and motifs added later.

Reusable Variable Template

Create [OBJECT / OBJECT-GROUP / VESSEL / TOY / FIGURINE / FIRED-EARTH ARTICLE] in the authentic handcrafted dimensional translation of Terracotta craft from Puducherry.

Build the full result through the same source terracotta grammar:

clay-born mass,
contour-led object form,
pottery / toy / figurine readability,
fired-earth surface,
warm terracotta earthen palette,
matte or softly burnished finish,
slight porous clay texture,

and handmade fired-object completion.

Show [MAIN OBJECT PURPOSE / SUBJECT / ARRANGEMENT / DISPLAY OR USE CONDITION], but deepen the result through stronger tactile fired-earth presence, clearer mass hierarchy, stronger contour readability, more believable relief, and richer handcrafted object-depth.

The result must still feel artisan-built from fired clay, not premium-commercial, not glossy, and not generic 3D. The dimensionality must come from clay mass, fired contour, and earthen material intelligence, not from decorative rendering polish.

Do not turn it into showroom ceramics, luxury décor pottery, cement/plaster simulation, generic sculpture photography, or a normal object with terracotta style added later.

Image-to-Image

Use the input image only for object identity, arrangement, scale intention, and broad composition. Rebuild the full result in the authentic handcrafted dimensional translation of Terracotta craft from Puducherry.

Transform all important visible parts into true terracotta logic:

clay-born volume,
pottery or toy / figurine objecthood,
refined fired contour,
warm earthen terracotta tones,
matte or softly burnished surface,
slight fired-clay porosity,
stronger relief,
and more tactile handmade object presence.

Increase mass separation, edge clarity, contour readability, and dimensional objecthood while keeping the exact same source grammar unchanged. The final result must feel like a richer artisan-built fired-earth object from Puducherry, not a glossy ceramic render or decorative imitation.

Do not apply terracotta color only. Do not keep generic product, plaster, cement, or ceramic-showroom logic underneath. Do not make it luxury décor, lifestyle styling, or realism-first rendering with earthen accents.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a fully self-contained complete world in the fully resolved believable dimensional-world translation of Terracotta craft from Puducherry.

This is not a cinematic makeover and not generic realism with terracotta accents. Keep the same source terracotta grammar unchanged:

clay-born volume,
fired-earth body,
pottery / toy / figurine-capable object logic,
contour-led form,
warm terracotta material identity,
matte or softly burnished earthen surface,
slight fired-clay porosity,
and handmade fired-object completion.

Build a fully resolved terracotta object-ecosystem or expanded terracotta world where every important visible form still obeys the same fired-earth logic. Increase world completion, material believability, mass clarity, foreground/midground/background resolution, believable light on earthen form, and whole-frame same-language control, but do not introduce another design language.

The final result must feel like Puducherry terracotta itself has become a believable complete dimensional world. If the result expands beyond a single object, all major visible forms must still feel clay-born, fired, and object-truthful rather than generic realism with local earthen accents.

Do not create a luxury pottery showroom, rustic interior styling, cinematic art world, generic realistic room with one terracotta object, or premium décor mood stronger than fired-earth craft logic.

Reusable Variable Template

Create [OBJECT / OBJECT-ECOSYSTEM / FIRED-EARTH WORLD / EXPANDED TERRACOTTA SCENE] in the fully resolved believable dimensional-world translation of Terracotta craft from Puducherry.

The full result must remain governed by one terracotta system:

clay-born mass,
pottery / toy / figurine object logic,
contour-led form,
warm fired-earth material tones,
matte or softly burnished finish,
slight porous clay texture,
and handmade fired-object completion.

Show [MAIN OBJECT PURPOSE / SUBJECT / ARRANGEMENT / WORLD CONDITION], but make every important visible form belong to the same terracotta grammar. Increase

full-world completion, mass presence, material believability, depth clarity, and near/mid/far resolution compared to V2 while keeping the source style-core unchanged.

Do not make it lifestyle realism, showroom ceramic design, rustic décor scene-making, cement/plaster imitation, or a generic realistic world with selected terracotta props inserted into it.

Image-to-Image

Use the input image only for object identity, arrangement, broad world structure, and scene readability. Rebuild the entire result as a fully resolved believable dimensional world in Terracotta grammar from Puducherry.

Transform every important visible form into one continuous fired-earth system:
clay-born volume,
pottery or toy / figurine object readability,
contour-led fired form,
warm terracotta material identity,
matte or softly burnished surface,
slight fired-clay porosity,
and same-language object-world control.

Preserve the broad scene meaning, but replace the full image-making system so the entire result belongs to Puducherry terracotta logic. The final image must feel like the craft itself has become fully real and fully complete without changing into another style.

Do not stylize one object only. Do not keep generic realism underneath. Do not build a normal room or décor world and add terracotta later. Do not introduce ceramic luxury styling, cement/plaster substitution, or premium mood as the dominant language.
