

Chandigarh modernist - Chandigarh

V1 — Authentic Style

Universal Hard Prompt

Create a fully self-contained image in the authentic visual grammar of Chandigarh modernist.

Build the entire scene as a planned civic-modernist environment shaped by formal geometry, low-rise urban order, open public ground, disciplined green structure, and honest materials. The world must feel like it belongs to original Chandigarh planning logic, not generic modernism.

Use rectilinear civic composition, strong mass-and-void balance, broad open space, exposed concrete, exposed brick where appropriate, climate-aware depth, hard sunlight, deep structural shadow, planned tree presence, and calm public order. The architecture and landscape must belong to one system. The frame should feel governed by Sun, Space, and Verdure.

If buildings are present, make them read as civic, institutional, administrative, or sector-modernist, with clear planar form, strong silhouette, controlled spacing, and no decorative excess. If roads, plazas, greens, or sector edges are visible, they must feel planned, low-rise, open, and structurally integrated into the same city language.

Do not make it generic brutalism, glass-tower urbanism, luxury minimalism, retro-modern styling, dense Indian city clutter, decorative façade design, or realism with one Chandigarh landmark inserted into a normal background. The entire visible frame must belong to the same Chandigarh civic-modernist system.

Reusable Variable Template

Create [subject / space / event / building / civic scene] in the authentic visual grammar of Chandigarh modernist.

The full image must be built as a planned civic-modernist environment with low-rise order, formal geometry, strong open space, disciplined green structure, exposed concrete and exposed brick where appropriate, hard sunlight, deep shadow, and architecture-landscape unity. Show [main action / state / situation] in [setting type], but make the entire frame obey one Chandigarh modernist system.

Use clear mass-and-void relationships, calm public seriousness, rational civic composition, broad grounds, planned planting, and honest materials. If people are present, they should

function as civic users and scale carriers inside an ordered public world, not as the primary style drivers.

Keep the image native, measured, open, low-rise, green-structured, and materially direct. Do not turn it into generic concrete modernism, high-rise skyline, polished architecture render, corporate urbanism, decorative retro-modern mood, or a normal city with one Chandigarh-style building.

Image-to-Image

Use the input image only for scene identity, subject placement, composition, and action. Rebuild the entire frame in the authentic visual grammar of Chandigarh modernist.

Transform all visible elements into one Chandigarh civic-modernist system: buildings, roads, open grounds, pathways, planted edges, civic space, landscape, and distant background must all feel planned, low-rise, geometrically ordered, and materially honest. Use exposed concrete, exposed brick where appropriate, broad open space, disciplined greenery, hard sunlight, deep structural shadow, and architecture-landscape unity.

Preserve the scene logic, but change the entire image-making system so it feels like it belongs to original Chandigarh planning and architectural order. Do not apply surface styling only. Do not leave the background generic. Do not keep dense urban clutter, glass towers, luxury minimalism, or random modernist buildings underneath. The whole frame must become Chandigarh modernist, not just one part of it.

V2 — Artisan Translation

Universal Hard Prompt

Create a fully self-contained image in the visual grammar of Chandigarh modernist, translated into richer dimensional form while staying completely faithful to the source system.

Build the entire scene as a planned civic-modernist environment with stronger spatial readability, fuller public-space depth, clearer foreground-midground-background structure, more tactile material presence, and more legible architecture-landscape integration. The image must still remain low-rise, open, green-structured, geometrically ordered, and materially honest.

Use exposed concrete, exposed brick where appropriate, broad civic grounds, hard sunlight, strong shadow-built depth, planned planting, open public intervals, and rational urban composition. Let buildings, roads, plazas, greens, and background relations feel more spatially complete and inhabitable than V1, but still completely governed by Chandigarh's own planning language.

Do not turn it into premium architectural visualization, luxury concrete design, glass-led modern urbanism, generic international modernism, or a more polished but less authentic version of Chandigarh. The extra depth must come from Chandigarh's own civic-space, climate, and material logic.

Reusable Variable Template

Create [subject / scene / building / civic situation] in Chandigarh modernist visual grammar, translated into richer dimensional form without leaving the source system.

Build the whole frame as a low-rise civic-modernist environment with formal geometry, strong open-space structure, disciplined greenery, exposed concrete and exposed brick where appropriate, hard sunlight, deep shadow, and clear architecture-landscape coordination. Show [main action / condition / event] inside [setting type], but make every visible element obey the same Chandigarh planning logic.

Increase spatial layering, material legibility, public-space depth, and environmental continuity compared to a pure source-truth version. Keep the scene measured, rational, open, green, and civically serious.

Do not make it a premium architecture render, prettier generic modernism, high-rise urbanism, retro-modern mood piece, decorative brutalism, or a normal city with a Chandigarh-looking insert.

Image-to-Image

Use the input image only for scene identity, subject placement, action, and broad composition. Rebuild the full frame in Chandigarh modernist grammar with richer dimensional translation.

Transform all visible elements into a unified Chandigarh civic-modernist world: architecture, grounds, paths, roads, greenery, public space, distant background, and any built forms must all feel planned, low-rise, geometrically ordered, open, and materially honest. Increase spatial depth, structural shadow, material presence, and environmental continuity while keeping the whole image faithful to Chandigarh's planning and civic logic.

The source image must not remain generic underneath. Do not apply concrete texture only. Do not keep random city background, high-rise development, glass urbanism, decorative modernism, or luxury visualization habits. The entire frame must become a richer dimensional Chandigarh modernist world.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a fully self-contained complete world in the visual grammar of Chandigarh modernist, translated into a believable full-world environment where every visible form belongs to the same civic-modernist system.

The entire scene must feel like a complete Chandigarh world: low-rise urban order, formal geometry, broad open public ground, disciplined green structure, planned roads and sector-like organization, exposed concrete, exposed brick where appropriate, hard sunlight, deep structural shadow, and architecture-landscape unity across foreground, midground, and background.

Build a full civic ecology with monuments, institutional or sector-modernist buildings where relevant, open spaces, tree-planned corridors, public movement zones, greens, skyline relation, and distant continuity, all governed by the same calm rational planning language. The frame must feel complete, believable, and inhabitable from front to back, but never lose Chandigarh's original source grammar.

Do not create generic realistic urban India, high-rise skyline, luxury-modern architecture, cinematic city mood, glass corporate development, or a normal world with one Chandigarh landmark inserted. Every visible element must belong to the same Chandigarh civic-modernist order.

Reusable Variable Template

Create [subject / civic moment / space / event / urban condition] as a full believable world in Chandigarh modernist visual grammar.

The full frame must become a complete low-rise civic-modernist environment with planned order, formal geometry, broad open space, disciplined greenery, exposed concrete and exposed brick where appropriate, sunlight-driven shadow, and full architecture-landscape coordination. Show [main action / event / state] inside [setting type], but make all visible elements belong to one Chandigarh system: buildings, grounds, roads, planted structure, public space, and background continuity.

Build near-to-far world consistency, calm civic seriousness, green-city openness, strong mass-and-void balance, and full public-space legibility. The result must feel believable and complete, but never drift into generic realistic city language.

No decorative overlay, no high-rise density, no retro-modern nostalgia, no premium render polish replacing the style, no generic brutalism, and no one-building Chandigarh accent inside a normal world.

Image-to-Image

Use the input image only as a guide for scene identity, subject placement, action, and broad composition. Rebuild the entire frame as a believable full-world Chandigarh modernist environment.

Transform every visible element into a continuous Chandigarh civic-modernist system: buildings, roads, paths, open grounds, planted edges, sector-like order, distant background, skyline relation, and public space must all feel low-rise, geometrically ordered, green-structured, climate-aware, and materially honest. Use exposed concrete, exposed brick where appropriate, broad space, disciplined greenery, hard sunlight, deep shadow, and full architecture-landscape unity.

Preserve scene meaning, but replace the full image-making logic so the entire frame belongs to Chandigarh's planning world. Do not stylize one building only. Do not keep background generic. Do not preserve dense urban clutter, glass towers, luxury modernism, or random Indian city behavior under the style. The whole world must obey the same Chandigarh modernist grammar.
