

Bankura terracotta - West Bengal

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Bankura terracotta from West Bengal**.

Treat this as a true **Bankura/Panchmura fired-clay sculptural-object system**, not as generic terracotta décor, not as studio pottery, not as realistic animal sculpture, and not as rustic lifestyle styling.

Build the entire image as if it comes from real Bankura terracotta intelligence:

- red fired clay body
- hand-built sculptural object construction
- part-based assembly memory
- stylized folk proportion
- strong emblematic silhouette
- incised or tool-shaped decorative articulation
- matte earthy surface behavior
- ritual / ornamental / functional object dignity
- whole-frame terracotta-world logic

The style must control the whole frame:

- object-type identity
- form silhouette
- proportion system
- assembly logic
- surface incision
- material behavior
- spatial presence
- relation between object and environment
- full image-world coherence

If figures, animals, props, architecture, or environment appear, do not build them as generic realism first.

Build them as if they were born from Bankura terracotta grammar:

stylized,
fired,
hand-built,
folk-sculptural,

symbolically clear,
and materially authored by clay.

Do not reduce the branch to:
red clay color only,
horse symbol only,
rustic handmade look only,
decorative incisions only,
or ethnic craft mood only.

Do not make:
generic pottery,
smooth ceramic studio craft,
realistic horse anatomy,
resin-like terracotta décor,
painted folk object with weak clay body,
or a normal realistic world with one Bankura object added later.

The final image must feel like **authentic Bankura/Panchmura terracotta intelligence itself generated the whole image-world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / OBJECT / WORLD]** in the **pure authentic source-truth visual logic of Bankura terracotta from West Bengal.**

Treat the style as a **fired-clay object system** built from:

- red terracotta body
- hand-built and part-built construction
- stylized folk proportion
- emblematic silhouette
- incised/tool-shaped articulation
- matte kiln-fired surface
- ritual / ornamental / functional object identity

Core style system to preserve:

- fired clay object truth
- form-first reading
- Bankura-like stylized proportion
- silhouette authority
- terracotta material memory
- incised structural detail
- same-language whole-frame control

Translate the image like this:

- **[MAIN OBJECTS / FIGURES / ANIMALS]** must become Bankura-born terracotta presences, not realistic subjects with clay texture added on top
- **[FORMS]** must feel stylized, assembled, and fired rather than anatomically corrected
- **[SURFACES]** must feel matte, earthy, incised, and kiln-authored
- **[DETAILS]** must support the body through terracotta craft logic, not replace it
- **[ENVIRONMENT / BACKGROUND]** must also inherit terracotta object-world intelligence rather than staying generic realism

Keep:

fired clay identity,
stylized objecthood,
part-built logic,
folk proportion,
incised articulation,
same-language world coherence.

Avoid:

generic terracotta décor,
realistic animal sculpture,
smooth ceramic refinement,
surface pattern stronger than form,
one source-aware object inside a generic world,
or premium rustic styling.

The final result must feel like **true Bankura terracotta logic itself generated the whole image**.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Bankura terracotta from West Bengal**.

Preserve the source image's subject count, main action, pose relationships, and scene readability,
but rebuild the entire image through **Bankura/Panchmura fired-clay object intelligence**.

Replace normal realism with:

- fired terracotta body logic
- stylized folk proportion
- emblematic silhouette
- hand-built / part-built construction memory
- incised surface articulation
- matte earthy kiln-finished material behavior

Do not merely add clay texture.

Do not merely add a Bankura horse.

Do not merely add folk incisions to realistic forms.

Do not turn the result into generic rustic terracotta styling.

Rebuild:

- figures or animals as Bankura-born terracotta forms
- props and objects as fired clay object-world elements
- surfaces as incised terracotta bodies
- environment as clay-authored spatial logic
- the whole frame as one uninterrupted Bankura terracotta language

The final result must feel like the source image has been completely re-authored through **authentic Bankura/Panchmura terracotta grammar**.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in **V2 = authentic handcrafted dimensional translation of Bankura terracotta from West Bengal**.

Preserve the same deep source grammar of the branch:

- fired red-clay object identity
- hand-built and part-built construction
- stylized folk proportion
- strong emblematic silhouette
- incised/tool-shaped articulation
- matte earthy surface
- ritual / ornamental object dignity
- whole-frame terracotta-world coherence

Now translate that same grammar into believable handcrafted dimensional form.

This must not become generic sculpture realism.

This must not become premium ceramic craft.

This must not become normal realistic animals or figures with terracotta styling added later.

Dimensionality must come from the branch itself:

- stronger clay mass
- clearer assembly and segmentation

- more tactile fired-object presence
- better neck-body-leg or part-to-part relation
- more believable incised depth
- stronger object-world spatial readability
- more inhabitable terracotta presence

Allow:

moderate dimensional presence,
clearer object thickness,
tactile kiln-fired material behavior,
stronger contour and part relations,
more readable foreground / midground / background separation,
and broader terracotta-world integration.

But keep unchanged:

the stylized folk proportion,
the emblematic silhouette,
the fired-clay identity,
the incised structural detail,
and the Bankura-authored object logic.

Do not let the object become realistic sculpture.

Do not let the surface become smoother than the branch.

Do not let the world become generic rural realism.

Do not let one horse or one lamp carry the style while the rest of the frame stays generic.

The whole image must feel like **Bankura terracotta logic has entered handcrafted dimensional embodiment**.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V2 = **authentic handcrafted dimensional translation of Bankura terracotta from West Bengal**.

Preserve the unchanged deep source core:

- fired clay object truth
- hand-built / part-built logic
- stylized folk proportion
- strong silhouette
- incised craft articulation
- matte terracotta surface
- same-language whole-frame control

Translate the image into handcrafted dimensional form by increasing:

- clay mass
- object thickness
- assembly readability
- incised depth
- tactile fired presence
- environment-object coherence
- spatial layering under terracotta logic

Build the image like this:

- **[MAIN OBJECTS / FIGURES / ANIMALS]** become dimensional terracotta presences still fully governed by Bankura proportion and silhouette logic
- **[FORMS]** gain stronger volume while staying stylized and folk-authored
- **[SURFACES]** gain tactile kiln-fired depth, never ceramic polish
- **[DETAILS]** remain incised and structural, never decorative-only
- **[ENVIRONMENT / BACKGROUND]** gains clay-object-world coherence, not generic realism

Keep:

fired clay identity,
stylized proportion,
silhouette-first reading,
part-built construction,
incised articulation,
whole-frame terracotta-world logic.

Avoid:

generic realistic sculpture,
studio ceramic refinement,
rustic décor prettiness,
surface texture without form intelligence,
one source-aware object inside a generic world,
or realism-first scene building.

The final image must feel like **authentic Bankura terracotta grammar translated into handcrafted dimensional presence**.

Image-to-Image

Convert this source image into **V2 = authentic handcrafted dimensional translation of Bankura terracotta from West Bengal**.

Keep the source image's subject count, core action, and readability,
but rebuild the entire image through Bankura terracotta grammar translated into handcrafted dimensional form.

The image must no longer behave like normal realism.

Replace that with:

- fired red-clay object identity
- stylized folk proportion
- part-built terracotta construction
- incised detail logic
- matte kiln-fired material memory
- emblematic object-world presence

Add:

- moderate dimensional presence
- clearer clay mass
- stronger assembly relation
- richer fired surface behavior
- more spatial readability
- stronger terracotta-world integration

But do not let dimensionality come from generic realism.

Do not keep realistic anatomy or normal sculpture logic under clay styling.

Do not build a generic Bengal/rustic world and then decorate it with Bankura objects.

Do not turn the image into premium terracotta décor.

Rebuild all visible elements so they feel born from **Bankura/Panchmura terracotta dimensional logic**.

The result must feel like the source image has entered the handcrafted dimensional state of the same Bankura terracotta system.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in **V3 = fully resolved believable dimensional world of Bankura terracotta from West Bengal**.

Preserve the same unchanged deep style-core:

- fired red-clay object identity
- hand-built and part-built construction memory
- stylized folk proportion
- emblematic silhouette
- incised/tool-shaped structural articulation
- matte earthy kiln-fired surface
- ritual / ornamental object dignity
- whole-frame terracotta-world logic

Now push that same grammar into its most believable, fully embodied dimensional world.

Believable here means:

- believable clay mass
- believable object presence
- believable kiln-fired material behavior
- believable part-to-part construction relation
- believable figure-ground separation
- believable world completion
- believable full-frame readability

It does NOT mean:

- generic realism
- premium décor language
- glossy ceramic refinement
- realistic animal anatomy
- rustic-luxury interior styling
- realism with Bankura cues added later

The same style must still govern:

- object silhouette
- proportion logic
- clay-body construction
- incised detail behavior
- material identity
- spatial organization
- whole-frame object-world coherence

Increase:

full volumetric embodiment,
material clarity,
object presence,
environmental completion,
foreground / midground / background resolution,
attention control,
whole-frame coherence,
and total Bankura-world readability.

But do not introduce a second style language.

Do not let realism become stronger than Bankura grammar.

Do not let the surface become more important than the object body.

Do not let the world become generic Bengal realism.

Do not let V3 become a prettier décor cousin of V1.

It must remain the same **Bankura/Panchmura terracotta grammar**, fully embodied.

The final image must feel like **Bankura terracotta intelligence itself has become a believable dimensional world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / OBJECT / WORLD]** in **V3 = fully resolved believable dimensional world of Bankura terracotta from West Bengal.**

Keep the same unchanged deep style-core:

- fired clay object truth
- stylized folk proportion
- part-built terracotta construction
- silhouette-first reading
- incised structural detail
- matte kiln-fired material memory
- same-language whole-frame control

Now fully embody that style into a believable dimensional world.

Increase:

- full clay-object volume
- material-light interaction for form clarity
- object-world completion
- environmental integration
- figure-ground separation
- focal hierarchy
- total world coherence

Build the image like this:

- **[MAIN OBJECTS / FIGURES / ANIMALS]** must be fully style-born and fully embodied, never generic realism with terracotta accents
- **[FORMS]** must remain Bankura-authored in silhouette and proportion
- **[SURFACES]** must remain matte, fired, incised, and clay-led
- **[DETAILS]** must support the body through terracotta logic, not replace it
- **[ENVIRONMENT / BACKGROUND]** must become a complete world that still behaves like Bankura terracotta, not ordinary realism

Keep unchanged:

fired clay ontology,
stylized proportion,
emblematic silhouette,
part-built construction memory,

incised structure,
same-language whole-frame coherence.

Avoid:

generic realistic sculpture,
premium décor editorial,
studio ceramic polish,
rustic-luxury styling,
one source-aware object inside a generic world,
or any second visual language overpowering the source grammar.

The final image must feel like **the same Bankura terracotta system has become fully embodied as a believable world.**

Image-to-Image

Convert this source image into **V3 = fully resolved believable dimensional world of Bankura terracotta from West Bengal.**

Preserve the source image's subject count, core action, scene purpose, and main readability,
but rebuild every visible element through **Bankura/Panchmura terracotta grammar fully embodied as a world.**

Replace ordinary realism with:

- fired clay object identity
- stylized folk proportion
- part-built terracotta construction
- incised structural detail
- matte kiln-fired surface behavior
- emblematic silhouette logic
- same-language terracotta-world order

Expand the source into:

- fully embodied Bankura terracotta forms
- believable clay-object presence
- strong spatial separation
- full environmental completion
- stronger object-world coherence
- total terracotta-authored image logic

But keep the same source grammar intact.
Do not let realism replace the branch.
Do not add Bankura objects only as props.

Do not let the background become generic realistic Bengal space.

Do not let V3 turn into premium rustic terracotta décor.

Do not let the image become a realistic sculpture world with folk residue.

Rebuild the entire frame so it feels like **authentic Bankura terracotta logic itself has become a fully resolved dimensional world.**

If the result feels like reality coated with terracotta styling, it has failed.

If it feels like Bankura terracotta grammar embodied as a whole world, it is correct.
