

Saharanpur wood - Uttar Pradesh

if translated beyond textile

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Saharanpur Wood from Uttar Pradesh**, treating it as a **Saharanpur-rooted wood-carving and wooden artware system** built through **seasoned sheesham or teak wood, hand-carved relief, fine engraved detail, pierced jaali lattice logic, Mughal–Persian–Indian floral–geometric ornamental blending, natural wood-tone authority, and polished carved-surface refinement**.

Build the image as if it genuinely belongs inside the native Saharanpur woodcraft tradition itself. The image must be governed first by **real wood-body presence, hand-cut carving intelligence, engraved contour detail, jaali structure, and finish-led natural wood refinement**, not by painted wood decoration, printed wood pattern, CNC-routed furniture styling, veneer illusion, or generic luxury carved décor.

The base must feel like real seasoned wood, dense and believable, with clear wood-body authority. The carving must feel shaped by chisels and hand tools, not by machine sameness. The surface must carry real carved depth, incised detail, and ornamental transitions between raised and recessed zones. Where latticework appears, it must feel structurally pierced through wood, not printed or faked.

The motif world must remain **Saharanpur-born**: floral carvings, Mughal-inspired geometric order, jaali pattern systems, engraved ornamental bands, and the blended refinement of Mughal, Persian, and Indian design intelligence. The image should preserve a sense of architectural memory even when applied to object scale.

Color must come from **wood species and finish first**, not paint. The visual richness must come from wood grain, carving depth, shadow, polished surface behavior, and ornamental structure. Brass or copper inlay may appear only as a secondary accent, never as the main engine. The final result must feel like **the real Saharanpur woodcraft system itself made the whole image**.

Reusable Variable Template

Create **[SUBJECT / CARVED WOOD SURFACE / WOODEN OBJECT / SAHARANPUR WOOD WORLD]** in the pure authentic source-truth visual logic of Saharanpur Wood from Uttar Pradesh.

Style system that must remain unchanged:

- real wood-body identity
- seasoned sheesham/teak authority
- hand-carved surface construction
- relief-and-engraving logic
- pierced jaali intelligence
- Mughal–Persian–Indian floral–geometric ornamental blending
- natural wood-tone and finish refinement
- whole-frame Saharanpur consistency

Translate the image like this:

- **[MAIN WOOD BODY / MAIN PANEL / MAIN OBJECT FACE / MAIN STRUCTURAL MASS]** becomes a Saharanpur-built carved wood presence governed by hand-cut wooden logic
- **[CARVED RELIEF / ENGRAVED DETAIL / FLORAL FORMS / GEOMETRIC STRUCTURES / JAALI PATTERNS / BORDER BANDS]** must feel wood-born, hand-cut, and structurally integrated
- **[WOOD GRAIN / WOOD TONE / SURFACE FINISH / POLISH / MATTE OR GLOSS RESPONSE]** must feel natural, believable, and finish-led rather than painted
- **[PIERCED AREAS / LATTICEWORK / OPEN PATTERN ZONES]** must feel truly cut through wood, not printed or mechanically faked
- **[EDGE LOGIC / PANEL DIVISIONS / DOOR FRAMES / SCREEN REGIONS / OBJECT SURFACES]** must feel construction-aware and usable
- **[IF FIGURES / OBJECTS / ARCHITECTURE APPEAR]** faces, bodies, posture, object logic, and environment logic must all be reorganized through Saharanpur carved-wood intelligence, not realism

Keep:

- wood-body authority
- hand-carved depth
- engraved line finesse
- jaali intelligence
- floral–geometric blend
- natural wood tones
- polished carved-surface refinement
- whole-frame consistency

Avoid:

- generic carved furniture
- CNC-routed look
- painted wood ornament

- printed wood pattern
- veneer illusion
- shallow decorative carving
- generic lattice décor
- realism with Saharanpur carving added later

The final result must feel like a true Saharanpur woodcraft system, not a wooden object wearing decorative motifs.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Saharanpur Wood from Uttar Pradesh**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through Saharanpur woodcraft grammar. Replace generic decoration with real hand-carved wood logic. Replace flat surface styling with carved relief and engraved detail. Replace generic cutout pattern with true jaali intelligence. Replace painted or synthetic color behavior with natural wood tone and finish refinement. Replace generic ornament with Saharanpur's Mughal–Persian–Indian floral–geometric carved language.

If the image includes ornamental zones, make them feel cut into real wood. If the image includes panels, screens, trays, furniture faces, doors, or object surfaces, make them behave like actual Saharanpur carved-wood structures. If the image includes figures, objects, or environment, they must also be reorganized through Saharanpur carved-wood intelligence rather than remain generic underneath a carved patch.

Do not simply add floral carving onto wood. Do not keep CNC logic underneath. Do not let the image behave like painted décor wood or machine furniture. The final result must feel as if the original image has been fully reauthored inside the true source-truth Saharanpur Wood system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic dimensional translation of Saharanpur Wood from Uttar Pradesh**, preserving the same deep source grammar as the authentic source-truth

version, but translating it into a **richer, more dimensional, more image-complete carved-wood world while staying fully wood-born and carving-born.**

Keep the core Saharanpur Wood grammar fully unchanged: real wood-body identity, seasoned sheesham/teak authority, hand-carved relief, engraved detail, pierced jaali intelligence, Mughal–Persian–Indian floral–geometric ornamental blending, and natural wood-tone finish refinement. Do not turn this into decorative wood concept art, digitally beautified carved furniture, generic luxury wooden décor rendering, or machine-routed ornament simulation.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal furniture, screen, tray, or carved-panel documentation, but it must also not become full generic realism-world depth. It should become a **creative hybrid carved-wood world** where Saharanpur’s own hand-carved intelligence generates richer form, clearer relief hierarchy, and stronger dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and relations must all be rebuilt through Saharanpur woodcraft logic. If objects appear, they must be shaped through carved relief, engraved structure, jaali order, and wood-surface refinement. If environment appears, it must grow from carved-wood surface intelligence and architectural-memory structure rather than remain generic. The carved-wood system must become the larger organizing intelligence, not just a decorative overlay.

Dimensionality must come from Saharanpur Wood itself: from seasoned wood mass, carved depth, engraved line structure, jaali cut rhythm, floral–geometric order, finish behavior, and object-to-panel adaptability. Do not solve dimensionality through generic rendering glamour, fake wood polish, or realism with one carved wooden patch added later.

Do not create:

decorative wood concept art, CNC-furniture glamour, generic carved-luxury rendering, faux-Mughal wooden styling, or a generic dimensional image decorated later by Saharanpur carving.

The final result must feel like **the same Saharanpur Wood grammar has entered a richer, more dimensional carved-wood world without losing hand-carved identity.**

Reusable Variable Template

Create **[SUBJECT / IMAGE / CARVED-WOOD WORLD / SAHARANPUR WOOD SURFACE SYSTEM]** in the **authentic dimensional translation of Saharanpur Wood from Uttar Pradesh.**

Keep unchanged:

- real wood-body identity

- seasoned sheesham/teak authority
- hand-carved surface construction
- relief-and-engraving logic
- pierced jaali intelligence
- Mughal–Persian–Indian floral–geometric ornamental blending
- natural wood-tone and finish refinement
- whole-frame style consistency

Translate it into a richer dimensional carved-wood world like this:

- **[MAIN WOOD BODY / MAIN PANEL / MAIN OBJECT FACE / MAIN SURFACE MASS]** becomes a Saharanpur-built carved presence with more dimensional life, but still governed by hand-cut wood order
- **[SECONDARY FIELDS / BORDER ZONES / SCREEN REGIONS / DOOR PANELS / OBJECT SURFACES]** also transform through the same Saharanpur grammar rather than generic styling
- **[RELIEF DEPTH / ENGRAVED DETAIL / JAALI STRUCTURE / SURFACE TRANSITIONS / WOOD GRAIN / FINISH RESPONSE]** become more spatially alive and structurally expressive while remaining wood-born
- **[FLORAL / GEOMETRIC / BORDER / LATTICE / ORNAMENTAL SYSTEMS]** must remain Saharanpur-native and carved, not printed or routed
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, object logic, and environment logic must all be rebuilt through Saharanpur wood order
- **[IF ENVIRONMENT APPEARS]** it must grow from carved-wood intelligence, jaali structure, and architectural-memory logic rather than generic realism

Increase:

- dimensional presence
- relief hierarchy clarity
- carving-to-surface coherence
- visual richness
- structural precision
- whole-frame transformation
- carved-wood world depth

Do not use:

- generic carved-furniture styling
- CNC precision in the wrong way
- painted wood logic
- printed wood pattern
- veneer illusion
- generic environment with Saharanpur overlay
- only one carved patch carrying the style
- luxury polish overpowering carving intelligence

Success condition:

the result feels like the same Saharanpur Wood grammar has been translated into a richer dimensional carved-wood world.

Failure condition:

the result feels like a generic decorative image decorated later by Saharanpur Wood.

Image-to-Image

Convert this source image into the **authentic dimensional translation of Saharanpur Wood from Uttar Pradesh**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through Saharanpur Wood's internal grammar translated into a richer, more dimensional carved-wood world.

Replace generic ornament with real hand-carved wood construction. Replace flat decorative surfaces with carved relief and engraved detail. Replace fake lattice with true jaali structure. Replace painted or synthetic wood behavior with natural wood-tone finish logic. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through Saharanpur carved-wood logic, not realism. If objects or environment are present, they must also be rebuilt through carved relief, jaali intelligence, and wood-surface refinement instead of remaining generic.

Let the image gain more dimensional life, stronger relief hierarchy, richer carving rhythm, and better whole-frame coherence. But do not turn it into decorative wood concept art, machine-furniture styling, or generic luxury décor with carving added afterward.

Do not style only one table panel, one screen strip, one tray face, or one box lid. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through an authentic dimensional translation of Saharanpur Wood**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **world-depth translation of Saharanpur Wood from Uttar Pradesh**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable full world**.

Keep the same deep Saharanpur Wood visual intelligence fully unchanged: real wood-body identity, seasoned sheesham/teak authority, hand-carved relief, engraved detail, pierced jaali intelligence, Mughal–Persian–Indian floral–geometric ornamental blending, and natural wood-tone finish refinement. Do not turn this into generic realism, luxury-home realism, interior décor realism, or a normal world with one carved table, screen, tray, or box added on top.

Now convert that same grammar into a believable full world. The result must have believable material behavior, believable spatial separation, believable object presence, believable environmental completion, and believable three-dimensional world logic. But every visible part of the image must still be generated by Saharanpur Wood grammar.

If figures are present, they must be rebuilt through Saharanpur-born carved-wood structure, not normal realism near carved furniture. If objects appear, they must be shaped through wood-body authority, carved relief, engraving, jaali order, and finish intelligence. If environment appears, it must be generated by carved-wood surface logic, floral–geometric ornamental organization, pierced lattice structure, and architectural-memory refinement. The world must not become ordinary reality with one carved-wood insert into it.

Depth must now become full world-depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in one table, one carved screen, one tray, one box, one panel, or one wooden patch. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **Saharanpur Wood itself has become a believable full world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED SAHARANPUR WOOD WORLD]** in the **world-depth translation of Saharanpur Wood from Uttar Pradesh.**

Keep unchanged:

- real wood-body identity
- seasoned sheesham/teak authority
- hand-carved surface construction
- relief-and-engraving logic
- pierced jaali intelligence
- Mughal–Persian–Indian floral–geometric ornamental blending
- natural wood-tone and finish refinement
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN CARVED SURFACE / MAIN WOODEN MASS]** becomes a fully embodied Saharanpur-built presence with believable carved-wood-world logic
- **[SECONDARY FORMS / SUPPORT FIELDS / BORDER ZONES / OBJECT SURFACES / SCREEN AREAS]** also remain under the same Saharanpur-born logic
- **[WOOD MASS / CARVED RELIEF / ENGRAVED DETAIL / JAALI STRUCTURE / FINISH RESPONSE / ORNAMENTAL HIERARCHY]** become world-organizing elements still governed by carved-wood structure
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by Saharanpur Wood intelligence rather than generic realism
- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, object logic, and environment logic must all remain Saharanpur-born, not realism-first

Increase:

- full world embodiment
- spatial separation
- object presence
- environmental orchestration
- relief-to-world transformation
- carving-structure readability
- whole-frame coherence

Do not lose:

- wood-body identity
- hand-carved logic
- engraved finesse
- jaali structure
- floral–geometric blend
- natural wood-tone authority
- Saharanpur refinement
- whole-frame Saharanpur identity

Do not use:

- realistic world with one carved object
- generic cinematic luxury-wood scene
- style-as-wood patch only
- style-as-floral carving only
- style-as-lattice motif only
- style-as-surface ornament only
- premium finish overpowering carving structure
- reality with Saharanpur flavor added later

Success condition:

the result feels like Saharanpur Wood itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with Saharanpur Wood.

Image-to-Image

Convert this source image into the **world-depth translation of Saharanpur Wood from Uttar Pradesh**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through Saharanpur Wood's source grammar translated into **full world-depth**.

Replace generic forms with Saharanpur-built carved-wood-world presences. Replace ordinary surfaces with hand-carved relief, engraved structure, and real wood-body authority. Replace generic decorative order with floral–geometric Mughal–Persian–Indian hierarchy, jaali logic, and finish-led wood refinement. Replace realism-first staging with Saharanpur-born carved-wood-world order. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through Saharanpur Wood grammar, not realism.

Allow the result to gain complete material embodiment, stronger spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with Saharanpur Wood added later. The whole world must remain Saharanpur-born.

Do not stylize only one carved table face, one screen panel, one tray, one box lid, one border, or one wooden patch while leaving the rest of the world generic. Do not make it a realism scene with a carving insert. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable full world generated by Saharanpur Wood itself**.
