

coir craft - Lakshadweep

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual and material logic of Coir Craft / Lakshadweep**.

Treat this as a true **Lakshadweep coconut-husk coir utility craft system**, not as generic beach handicraft, not as eco-luxury décor, not as wicker, not as cane, not as jute, and not as a tropical lifestyle product.

Build the entire image through real Lakshadweep coir intelligence:

- coconut-husk coir fiber identity,
- twist and cordage logic,
- rope-making behavior,
- braid and weave structure,
- mat and basket object families,
- hand-built tension,
- coarse tactile fiber mass,
- utility-first objecthood,
- and island-rooted livelihood use.

The style must control the whole frame:

- material behavior,
- form generation,
- surface structure,
- edge behavior,
- object construction,
- spatial role,
- and use-value.

Do not make a normal realistic object and then add coir texture afterward.

If the image includes people, they must not remain generic realistic humans holding a basket or rope.

They must become coir-world presences:

- built through fiber logic,
- structural simplicity,
- use-action clarity,
- and material-first organization.

If environment appears, it must remain subordinate to coir craft intelligence, not become generic lagoon/beach atmosphere.

Use the correct branch logic:

material first,
construction first,
object family first,
spatial role next,
finish after that,
version behavior last.

Pattern, beauty, and atmosphere must emerge from coir structure, not replace it.

Keep:

real coir fiber,
rough-soft tactile strands,
visible twist and rope tension,
woven or braided compactness,
basket and mat build logic,
hand-built assembly,
utility presence,
and island craft realism.

Do not make:

generic coastal décor,
smooth product design,
wicker/cane basket logic,
jute softness,
printed pattern behavior,
normal furniture with natural-fiber skin,
or a beach scene where coir is only a prop.

The final image must feel like:

authentic Lakshadweep coir craft itself authored the whole frame.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** in the **pure authentic source-truth logic of Coir Craft / Lakshadweep**.

Treat the style as a real island coir-craft system built from:

coconut-husk fiber,
twist / rope / braid / weave logic,
rope-mat-basket utility object families,
coarse tactile strand mass,
and hand-built structural tension.

Core style system to preserve:

coir identity,
cordage logic,

woven or braided object construction,
use-object truth,
island livelihood grounding,
and whole-frame same-language control.

Translate the image like this:

[MAIN SUBJECT / MAIN OBJECT] becomes a source-faithful coir-built presence with real fiber logic and hand-assembled structure.

[SECONDARY OBJECTS / FIGURES] become supporting coir-world forms obeying the same material and construction behavior.

[ENVIRONMENT / GROUND / BACKGROUND] becomes a coir-authored use-space rather than generic coastal realism.

Keep:

fiber truth,
twist tension,
woven buildup,
mat/basket/rope logic,
rough-soft tactility,
and useful objecthood.

Avoid:

beach-handicraft simplification,
eco-boutique styling,
wicker substitution,
generic realism with coir props,
or background-more-styled-than-craft failure.

The final image must feel like:

the source Lakshadweep coir tradition itself generated the entire frame.

Image-to-Image

Convert this source image into the **pure authentic source-truth logic of Coir Craft / Lakshadweep**.

Preserve the source image's:

[SUBJECT COUNT]
[CORE ACTION]
[MAIN RELATIONSHIPS]
[KEY OBJECTS]
[VIEWER-READ]
[BASIC STAGING]

Replace ordinary image logic with:

coconut-husk coir identity,

twisted cordage structure,
braided or woven buildup,
rope / mat / basket object logic,
coarse tactile fiber mass,
and hand-built utility presence.

Do not simply overlay coir texture.
Do not keep generic realistic bodies, props, or space.
Do not turn the image into tropical décor.
Do not substitute cane, jute, wicker, or generic natural-fiber craft.

Rebuild every visible element so it feels born from coir construction logic.
The final result must feel like:
the original image has been fully rebuilt inside authentic Lakshadweep coir craft grammar.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in **V2 = authentic handcrafted dimensional translation of Coir Craft / Lakshadweep.**

Preserve the same unchanged deep source core:
coconut-husk coir identity,
twist / cordage / braid / weave / assembly logic,
rope-mat-basket utility-world,
coarse tactile fiber mass,
hand-built structural tension,
and island-rooted use presence.

Now translate that same craft grammar into believable handcrafted dimensional form.

This must still feel fully style-born.
The material must remain source-born.
The object construction must remain source-born.
If figures appear, they must remain source-born.
If environment appears, it must remain source-born.

Allow:
controlled dimensional presence,
rope thickness,
fiber bundle buildup,
basket wall depth,

mat-body compactness,
clearer front / middle / back readability,
stronger objecthood,
stronger tactile material presence,
and stronger relation between object and use-space.

But all of this dimensionality must come from coir's own logic:
from twist tension,
from braid rhythm,
from rope thickness,
from woven and lashed assembly,
from bundled fiber behavior,
from utility-object construction.

Do not allow:
generic 3D product rendering,
premium coastal furnishing style,
wicker/cane/jute drift,
smooth industrial finish,
random handmade-rustic look,
normal humans using styled props,
or an environment where only accessories are coir-coded.

The whole image must feel like:
master makers from the Lakshadweep coir tradition translated the same branch into handcrafted dimensional reality without changing its grammar.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** in **V2 = authentic handcrafted dimensional translation of Coir Craft / Lakshadweep.**

Preserve the same unchanged source core:
coir fiber identity,
twist and cordage logic,
rope-mat-basket object families,
coarse tactile strand mass,
hand-built structural tension,
and island utility truth.

Translate the image like this:
[MAIN SUBJECT / MAIN OBJECT] becomes a dimensional coir-built presence with clearer thickness, stronger structural readability, and real handcrafted fiber body.
[SECONDARY OBJECTS / FIGURES] become supporting coir-world forms obeying the same twist / weave / braid logic.

[ENVIRONMENT / GROUND / BACKGROUND] becomes a believable handcrafted use-space built from the same coir intelligence, not generic realism.

Increase:

- rope thickness,
- braid buildup,
- woven compactness,
- fiber tactility,
- object volume,
- edge clarity,
- and spatial readability.

Do not lose:

- coir truth,
- use-object identity,
- hand-built tension,
- island livelihood grounding,
- and whole-frame same-language control.

Avoid:

- generic eco-product look,
- coastal lifestyle styling,
- wicker substitution,
- luxury natural-fiber furnishing,
- or realism-first scene-building with coir added later.

The final image must feel like:

the same coir grammar has entered handcrafted dimensional space while staying fully authentic.

Image-to-Image

Convert this source image into **V2 authentic handcrafted dimensional Coir Craft / Lakshadweep**.

Preserve the source image's:

- [SUBJECT COUNT]**
- [CORE ACTION]**
- [MAIN RELATIONSHIPS]**
- [KEY OBJECTS]**
- [VIEWER-READ]**
- [BASIC STAGING]**

Replace ordinary image logic with:

- real coir fiber thickness,
- visible twist and cordage buildup,

woven or braided structural depth,
rope / mat / basket construction logic,
hand-built tension,
and stronger material tactility.

Allow:

clearer object volume,
stronger structural readability,
more tactile fiber mass,
better front / middle / back separation,
and more believable use-object presence.

Do not:

make it a premium coastal product render,
make it smooth and industrial,
drift into cane/jute/wicker logic,
keep figures generic and only style the props,
or let background realism overpower coir structure.

The final result must feel like:

a handcrafted dimensional expansion of the same Lakshadweep coir grammar.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in **V3 = fully resolved believable dimensional translation of the same Coir Craft / Lakshadweep source style.**

Preserve the same unchanged deep style-core:

coconut-husk coir identity,
twist / cordage / braid / weave / assembly logic,
rope-mat-basket utility-world,
coarse tactile fiber mass,
hand-built structural tension,
and island-rooted livelihood/use presence.

Keep the same source grammar fully dominant.

Do not introduce a second visual language.

Do not turn this into premium coastal décor.

Do not turn it into a resort-like natural-fiber interior.

Do not make realism stronger than coir craft logic.

Now push the same source style into its most complete believable dimensional world.

Increase:

full material clarity,
stronger twist and weave readability,
stronger rope thickness and basket-wall believability,
clearer object weight,
clearer figure-ground separation,
clearer environmental completion,
stronger focal hierarchy,
stronger whole-frame orchestration,
and stronger real-world believability.

But these improvements must come from the same coir system itself:

real fiber bundles,
real tension,
real twist,
real weave,
real assembly,
real use-object construction,
real island work-and-use presence.

If figures appear, they must still be made from the style itself.

If environment appears, it must still be made from the style itself.

Every visible element must remain inside the same coir-born visual language.

Critical V3 test:

if removing the premium finish would make the coir grammar disappear, the prompt is wrong.

The realism must come from coir structure itself, not from generic realism layered over the branch.

The final image must feel like:

Lakshadweep coir craft itself has become a fully resolved believable world, not reality coated with coir styling.

Reusable Variable Template

Create [SUBJECT / OBJECT / SCENE / WORLD] in V3 = fully resolved believable dimensional translation of the same Coir Craft / Lakshadweep source style.

Keep the same unchanged source core:

coconut-husk coir identity,
twist / rope / braid / weave / assembly logic,
rope-mat-basket object worlds,
coarse tactile fiber mass,
hand-built utility presence,
and island livelihood grounding.

Translate the image like this:

[MAIN SUBJECT / MAIN OBJECT] becomes a fully embodied coir-built presence with believable fiber mass, structural depth, and use-object realism.

[SECONDARY OBJECTS / FIGURES] become equally style-born presences obeying the same coir grammar.

[ENVIRONMENT / GROUND / BACKGROUND / SPACE] becomes a complete believable world still governed by coir logic, not coastal décor realism.

Increase:

- material believability,
- fiber resolution,
- structural depth,
- object weight,
- space clarity,
- environmental coherence,
- attention control,
- and whole-frame unity.

Do not lose:

- source-born coir identity,
- source-born utility logic,
- hand-built tension,
- rope/mat/basket object truth,
- and same-style full-frame control.

Avoid:

- eco-luxury styling,
- tropical lifestyle imagery,
- premium product photography,
- generic natural-fiber interiors,
- wicker/jute/cane drift,
- or any realism stronger than the coir system.

The final image must feel like:

the same Lakshadweep coir grammar fully embodied into believable reality.

Image-to-Image

Convert this source image into **V3 fully resolved believable Coir Craft / Lakshadweep**.

Preserve the source image's:

[SUBJECT COUNT]

[CORE ACTION]

[MAIN RELATIONSHIPS]

[KEY OBJECTS]
[VIEWER-READ]
[BASIC STAGING]

Replace ordinary realism with:

real coir fiber mass,
real twist tension,
real braided/woven structure,
real rope / mat / basket construction,
real hand-built utility presence,
and island-rooted coir-world logic.

Expand the image into:

full fiber-material clarity,
full structural readability,
strong object weight,
clear environmental completion,
strong figure-ground separation,
and complete whole-frame same-language unity.

Do not merely add natural-fiber texture.

Do not make a tropical décor image.

Do not keep generic realistic people, room, or beach mood.

Do not let realism replace coir logic.

Do not let V3 become a more stylish cousin of V1.

The final result must feel like:

the source image has been fully rebuilt as a complete believable Lakshadweep coir world.
