

Bagh embroidery - Punjab

V1 — Authentic Style

Universal Hard Prompt

Create an image in the pure authentic source-truth visual logic of Bagh embroidery from Punjab.

Treat this as a real dense embroidered cloth system inside the Phulkari family, not as generic Punjabi fashion decoration, not as printed floral pattern, not as boutique ethnic embroidery, and not as a realistic scene with rich embroidery added later.

Build the entire image as if it comes from true Bagh intelligence:

handwoven khaddar ground,
reverse-side counted darn-stitch construction,
untwisted silk-floss luminosity,
dense field occupation,
cloth-ground suppression through structured embroidery,
motif-through-density rather than scattered motif placement,
horizontal, vertical, and diagonal stitch-field planning,
ceremonial domestic richness,
and textile-first visual order.

The style must control the whole frame:

faces,
bodies,
silhouettes,
posture,
figure grouping,
objects,
ground,
environment,
surface ordering,
spacing,
and field saturation.

If figures appear, do not build them as normal realistic people.

Build them as dense textile-born presences:

stitch-readable faces,
simplified structural body logic,
embroidery-compatible drapery,
field-compatible silhouettes,

and forms that feel generated by dense counted stitch occupation.

Space must not behave like ordinary perspective realism.

The image should feel field-built, density-governed, cloth-aware, repetition-aware, and surface-saturated.

From far view it should read as a luminous fully occupied embroidered field.

From near view it should reveal directional stitch build, dense structure, floss-over-cloth behavior, and field planning.

Preserve true Bagh identity:

dense embroidered takeover of the field,

structured saturation,

Punjab-rooted ceremonial textile richness,

counted stitch logic,

and cloth-first image intelligence.

Do not make it:

printed,

wallpaper-like,

generic floral embroidery,

machine-perfect boutique patterning,

normal humans wearing rich textiles,

fashion-catalog ethnic luxury,

random ornament overload,

or ordinary realism with Bagh decoration.

The final image must feel like the source Bagh tradition itself made this image.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in the pure authentic source-truth visual logic of Bagh embroidery from Punjab.

Treat the style as a dense field-occupation embroidery system built from:

handwoven khaddar ground,

reverse-side counted darn-stitch logic,

untwisted silk-floss luminosity,

cloth-ground suppression through structured density,

motif-through-density,

field saturation,

and ceremonial domestic Punjab textile intelligence.

Core style system to preserve:

dense field identity,

counted stitch structure,

cloth-first image order,

directional embroidery planning,
silk-floss over khaddar behavior,
structured visual saturation,
Punjab-rooted textile richness,
whole-frame consistency.

Translate the image like this:

[MAIN FIGURES] must become dense textile-born stitched presences, not normal realistic anatomy

[FACES] must become embroidery-readable, simplified, structurally clear, and non-photoreal

[BODIES / DRAPERY] must obey stitch density, field pressure, and cloth-born ornament logic

[OBJECTS / PROPS] must feel generated through dense embroidery planning, not added as normal realism

[ENVIRONMENT / BACKGROUND] must also inherit field saturation, repetition logic, and embroidered world order

Keep:

dense field occupation,
counted construction,
cloth-ground memory,
directional stitch build,
luminous floss behavior,
textile saturation,
structured richness.

Avoid:

generic Punjabi festive styling,
printed pattern logic,
fashion-commercial embroidery,
random dense ornament,
realistic scene with rich embroidered garments only,
machine-perfect surface repetition,
or one Bagh cloth inside an unstylized world.

The final result must feel like true Bagh itself generated the whole image.

Image-to-Image

Convert this source image into the pure authentic source-truth visual logic of Bagh embroidery from Punjab.

Preserve the source image's subject count, main action, pose relationships, and basic readability,
but rebuild the entire image through real Bagh dense textile intelligence.

Replace normal realism with:
khaddar-ground memory,
reverse-side counted darn-stitch construction,
dense silk-floss occupation,
cloth-ground suppression through embroidery structure,
motif-through-density,
field saturation,
and textile-authored figure, object, and environment logic.

Do not merely place Bagh embroidery onto clothing.
Do not merely add floral motifs or rich Punjabi colors.
Do not turn the result into printed dense patterning.
Do not keep realistic faces, realistic space, and realistic background while only textiles change.

Rebuild:
faces as dense textile-readable forms,
bodies as stitch-compatible presences,
objects as embroidery-organized units,
environment as saturated cloth-field world logic,
and the whole frame as one Bagh-authored visual language.

The final result must feel like the source image has been completely re-authored by authentic Bagh, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in V2 = authentic handcrafted dimensional translation of Bagh embroidery from Punjab.

Preserve the same deep source grammar of Bagh:
handwoven khaddar ground memory,
reverse-side counted darn-stitch logic,
untwisted silk-floss luminosity,
dense field occupation,
cloth-ground suppression through structure,
motif-through-density,
directional embroidered planning,
and ceremonial Punjab textile richness.

Now translate that same grammar into believable handcrafted dimensional form.

This must not become generic realism.

This must not become normal 3D cloth with dense embroidery added later.

This must not become a premium fashion image.

Dimensionality must come from Bagh itself:

through dense field layering,

stitch-density hierarchy,

cloth thickness,

embroidery pressure,

silk-floss tactility,

field separation,

drape structured by saturation,

and embroidered ordering of figures, objects, and space.

Allow:

moderate dimensional presence,

tactile handcrafted objecthood,

clearer separation of foreground / middle / background,

thicker material behavior,

embroidery-built surface depth,

and inhabitable but still textile-ruled image-space.

Figures must remain style-born:

faces must be dense textile-readable,

bodies must be field-authored,

silhouettes must be stitch-built,

posture and grouping must feel structured by embroidered saturation,

not by ordinary realism.

Objects and environment must also inherit dense embroidery logic.

Do not let only garments carry the style.

Do not let the environment become generic realism.

Do not let density collapse into decorative surface only.

The whole image must feel like Bagh has entered handcrafted dimensional space without losing dense field control.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V2 = authentic handcrafted dimensional translation of Bagh embroidery from Punjab.

Preserve the unchanged deep source core:

khaddar ground memory,

counted reverse-side darn-stitch logic,

silk-floss luminosity,

dense field occupation,
cloth-ground suppression,
motif-through-density,
and textile-first image order.

Translate the image into handcrafted dimensional form by increasing:
volume,
objecthood,
material tactility,
field layering,
depth readability,
cloth-body relation,
embroidery pressure,
and dense-field environment logic.

Build the image like this:

[MAIN FIGURES] become dense textile-born dimensional presences, still governed by stitch density and field order

[FACES] remain simplified and embroidery-readable, never photoreal

[BODIES / DRAPERY] gain tactile thickness and handcrafted form, but still read as dense field-built

[OBJECTS / PROPS] gain dimensional body through embroidery logic, not realism-first modeling

[ENVIRONMENT / BACKGROUND] gains dense embroidered structure, not generic perspective realism

Keep:

dense field ontology,
counted stitch order,
cloth-ground memory,
silk-floss material life,
style-born characters,
style-born environment,
structured saturation.

Avoid:

generic 3D realism,
normal humans in rich embroidered clothes,
realistic background with Bagh textile accents,
printed-look density,
boutique ethnic luxury feel,
machine-finished ornamental prettiness,
or depth built by realism instead of by dense stitch-field logic.

The final image must feel like authentic Bagh translated into handcrafted dimensional presence.

Image-to-Image

Convert this source image into V2 = authentic handcrafted dimensional translation of Bagh embroidery from Punjab.

Keep the source image's subject count, core action, and readability,
but rebuild the entire image through Bagh dense textile grammar translated into handcrafted dimensional form.

The image must no longer behave like normal realism.

Replace that with:

khaddar-ground memory,
reverse-side counted stitch structure,
silk-floss tactility,
dense field occupation,
motif-through-density,
style-born figures,
and embroidery-authored objects and environment.

Add:

moderate dimensional presence,
tactile cloth and thread materiality,
clear field separation,
objecthood,
and handcrafted space logic.

But do not let dimensionality come from generic realism.

Do not keep realistic faces and bodies under richly decorated garments.

Do not build a normal 3D environment and then add Bagh density afterward.

Rebuild all visible elements so they feel born from dense embroidery-field logic.

The result must feel like the source image has entered Bagh's handcrafted dimensional world, not that rich embroidery has been placed on top of an ordinary scene.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in V3 = fully resolved believable real-world 3D translation of the same source grammar of Bagh embroidery from Punjab.

Preserve the same unchanged deep style-core:

khaddar ground memory,
reverse-side counted darn-stitch logic,
untwisted silk-floss luminosity,
dense field occupation,

cloth-ground suppression through structure,
motif-through-density,
directional embroidered field planning,
textile-first figure design,
and Punjab-rooted ceremonial textile richness.

Now push that same grammar into its most believable, fully embodied real-world 3D scene.

Real-world here means:

believable volume,
believable material behavior,
believable object presence,
believable spatial separation,
believable scene completion,
and believable full-frame readability.

It does NOT mean:

generic realism,
cinematic makeover,
premium Punjabi luxury tableau,
or realism with dense Bagh motifs added later.

The same style must still govern:

faces,
bodies,
silhouettes,
drapery,
figure grouping,
objects,
ground,
architecture,
vegetation,
and environment ordering.

Increase:

full volumetric embodiment,
material clarity,
figure-ground separation,
environmental completion,
attention control,
scene coherence,
and whole-frame readability.

But do not introduce a second visual language.

Do not let the environment become more realistic than the characters.

Do not let Bagh survive only in garments, shawls, or decorative borders.

Do not make V3 a different premium style version.

It must remain the same dense Bagh grammar, fully embodied.

The final image must feel like Bagh itself has become a believable real-world 3D scene.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V3 = fully resolved believable real-world 3D translation of the same source grammar of Bagh embroidery from Punjab.

Keep the same unchanged deep style-core:

khaddar ground memory,
counted stitch structure,
silk-floss luminosity,
dense field-and-motif planning,
cloth-ground suppression,
textile-first figure logic,
and Punjab ceremonial textile intelligence.

Now fully embody that style into a believable 3D world.

Increase:

full volumetric depth,
material-light interaction,
object presence,
environment completion,
figure-ground separation,
focal clarity,
and whole-scene coherence.

Build the image like this:

[MAIN FIGURES] must be fully style-born and fully embodied, never generic realism wearing dense embroidery

[FACES] must remain source-born, textile-readable, and non-photoreal in their logic

[BODIES / DRAPERY] must feel fully real in space, but still governed by dense embroidered field ordering

[OBJECTS / PROPS] must become fully present and believable through Bagh logic, not realism-first modeling

[ENVIRONMENT / BACKGROUND] must become a complete world that still behaves like Bagh authored it

Keep unchanged:

dense field ontology,
counted stitch order,
cloth-ground intelligence,
motif-through-density,
style-born characters,
style-born environment,

single visual language across the frame.

Avoid:

generic cinematic illustration,
luxury Punjabi realism,
fashion-editorial finish,
ordinary realism with dense embroidery accents,
style only in garments,
style only in borders,
generic toon under rich patterning,
or any second visual language overpowering the source grammar.

The final image must feel like the same Bagh system has become fully embodied reality.

Image-to-Image

Convert this source image into V3 = fully resolved believable real-world 3D translation of the same source grammar of Bagh embroidery from Punjab.

Preserve the source image's subject count, core action, scene purpose, and main relationships,
but rebuild every visible element through Bagh dense textile intelligence fully embodied as reality.

Replace ordinary realism with:

khaddar-ground memory,
counted reverse-side stitch logic,
silk-floss surface life,
cloth-ground suppression through structured density,
motif-through-density,
textile-born figure logic,
and embroidered world ordering.

Expand the source into:

fully embodied figures,
believable material presence,
clear spatial separation,
full environmental completion,
strong object presence,
and coherent real-world scene depth.

But keep the same source grammar intact.

Do not let realism replace the style.

Do not add Bagh only to fabrics.

Do not let the background become generic realism.

Do not let V3 turn into a cinematic premium makeover.

Rebuild the entire frame so it feels like authentic Bagh itself has become reality.
If the result feels like reality coated with Bagh, it has failed.
If it feels like Bagh embodied as a whole world, it is correct.
