

Bomkai - Odisha

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Bomkai from Odisha**, treating it as an **Odisha handloom saree-and-fabric system** built through woven field-and-border intelligence, saree-architecture-based hierarchy, structured decorative contrast, and handloom cloth identity.

Build the image as if it genuinely belongs inside the native Bomkai woven system itself. The image must be governed first by **body field, border field, and pallu/anchal emphasis**, not by generic fashion styling, print logic, embroidery simulation, or decorative surface treatment. The cloth must feel handloom-made, loom-born, and structurally organized. Design must feel inside the cloth, not applied onto it.

The body field must remain readable as a woven zone with its own identity. The border must act as a structural carrier, not decorative trim only. The pallu or anchal must feel like an integrated intensified zone, not an unrelated decorative panel. Contrast must behave as textile hierarchy, not as mood or luxury styling. Color must support field separation, section distinction, and woven design order, not atmospheric grading or painterly shading.

If the textile is shown draped, folded, hanging, or worn, the sectional hierarchy must remain readable under cloth movement. If figures or broader image-world forms appear, faces, bodies, objects, and environment must still be rebuilt through Bomkai-born sectional order and woven design intelligence rather than generic realism.

Do not make this generic Odisha handloom, printed decorative saree, embroidered-looking fabric, boutique fashion cloth, or realism with Bomkai-like border added later. The final result must feel like **the real Bomkai handloom system itself made the whole image**.

Reusable Variable Template

Create [SUBJECT / TEXTILE IMAGE / FIGURAL TEXTILE IMAGE / WOVEN FIELD SYSTEM] in the **pure authentic source-truth visual logic of Bomkai from Odisha**.

Style system that must remain unchanged:

- saree-architecture identity
- body-border-pallu hierarchy

- woven field-and-border intelligence
- structured decorative contrast
- handloom cloth identity
- loom-born design order
- sectional readability
- whole-frame Bomkai consistency

Translate the image like this:

- **[MAIN FIELD / MAIN FORM / MAIN FIGURE IF PRESENT]** becomes a Bomkai-built presence governed by sectional textile hierarchy
- **[BODY FIELD]** remains structurally woven and readable
- **[BORDER FIELD]** acts as an integrated structural carrier, not trim
- **[PALLU / ANCHAL / EMPHASIS ZONE]** becomes a connected intensified woven zone
- **[DRAPE / HANG / BASE CLOTH BODY]** preserves handloom cloth movement without destroying design hierarchy
- **[IF FIGURES OR OBJECTS APPEAR]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all be reorganized through Bomkai textile order, not realism

Keep:

- saree architecture
- field-border-pallu relation
- woven decorative order
- handloom tactility
- structural contrast
- sectional clarity
- whole-frame consistency

Avoid:

- generic Odisha handloom mood
- printed fabric logic
- embroidery-like surface effect
- fashion-styling realism
- pallu as unrelated panel
- border doing all the work while the body stays generic
- realism with Bomkai accents added later

The final result must feel like a true Bomkai handloom system, not a modern textile image wearing Bomkai cues.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Bomkai from Odisha**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through Bomkai grammar. Replace generic cloth design with body-border-pallu hierarchy. Replace decorative surface treatment with woven field-and-border intelligence. Replace fashion-mood color with structural contrast. Replace generic texture with handloom cloth identity. Replace random ornament with sectional textile order.

If the image includes drape or wearable cloth, keep the woven hierarchy readable under movement. If figures or objects appear, they must also be reorganized through Bomkai's internal structural logic rather than remain generic under styled fabric.

Do not simply add ornate borders or Odisha handloom feeling to the source image. Do not keep realism underneath. Do not let the pallu behave like a separate decorative insert. The final result must feel as if the original image has been fully reauthored inside the true source-truth Bomkai woven system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **creative artisan translation of Bomkai from Odisha**, preserving the same deep source grammar as the authentic source-truth version, but translating it into a **richer, more imaginative, more dimensional 2D + 3D hybrid visual system**.

Keep the core Bomkai grammar fully unchanged: saree-architecture identity, body-border-pallu hierarchy, woven field-and-border intelligence, structured decorative contrast, handloom cloth memory, sectional order, and Bomkai-born compositional DNA. Do not turn this into generic fashion render, textile sample mockup, surface texture exercise, embossing effect, luxury cloth realism, or realism with Bomkai surface styling.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal cloth description, but it must also not become full realistic scene-world depth. It should become a **creative hybrid style-image** where Bomkai's own internal sectional order generates richer form, stronger visual invention, and more dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and figure relations must all be rebuilt through Bomkai's woven sectional intelligence. If objects appear, they must be shaped through body-border-pallu logic, contrast discipline, and field hierarchy. If environment appears, it must grow from Bomkai's internal

order rather than remain generic. The textile architecture must become a larger organizing intelligence, not just fabric decoration.

Dimensionality must come from Bomkai itself: from sectional hierarchy, woven contrast, body-border-pallu relations, field separation, cloth architecture, and loom-born organization. Do not solve dimensionality through generic rendering habits, normal anatomy, realistic fashion-world lighting, or a generic environment with Bomkai cloth added on top.

Do not create:

textile mockup, craft simulation, embossing, relief effect, luxury fabric ad-image, generic dimensional cloth render, or a generic dimensional image decorated later by Bomkai.

The final result must feel like **the same Bomkai grammar has entered a richer, more imaginative, more dimensional artisan translation without losing itself.**

Reusable Variable Template

Create **[SUBJECT / IMAGE / FIGURAL SYSTEM / STRUCTURED TEXTILE WORLD]** in the **creative artisan translation of Bomkai from Odisha.**

Keep unchanged:

- saree-architecture identity
- body-border-pallu hierarchy
- woven field-and-border intelligence
- structured decorative contrast
- handloom cloth memory
- sectional order
- Bomkai compositional DNA
- whole-frame style consistency

Translate it into a richer dimensional hybrid visual system like this:

- **[MAIN FORM / MAIN FIGURE / MAIN GROUP / MAIN FIELD]** becomes a Bomkai-built presence with more dimensional life, but still controlled by sectional textile order
- **[SECONDARY FORMS / SUPPORT FIELDS]** also transform through the same Bomkai grammar rather than generic styling
- **[BODY / BORDER / PALLU / EMPHASIS ZONES]** become more spatially alive and structurally expressive while remaining woven-order based
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all be rebuilt through Bomkai organization
- **[IF ENVIRONMENT APPEARS]** it must grow from Bomkai field separation, contrast hierarchy, and sectional order rather than realism

Increase:

- dimensional presence
- visual richness
- artisan-like reinterpretation
- hybrid 2D + 3D form
- structural clarity
- whole-frame transformation
- imaginative spatial layering

Do not use:

- textile sample mockup logic
- surface-texture-only translation
- embossing or relief tricks
- generic fabric rendering
- realistic anatomy with styled cloth
- generic environment with Bomkai overlay
- only clothing or border carrying the style

Success condition:

the result feels like the same Bomkai style has been artistically translated into a richer dimensional hybrid system.

Failure condition:

the result feels like a generic dimensional image decorated later by Bomkai.

Image-to-Image

Convert this source image into the **creative artisan translation of Bomkai from Odisha**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through Bomkai's internal grammar translated into a richer, more dimensional 2D + 3D hybrid visual system.

Replace generic textile behavior with body-border-pallu intelligence. Replace ordinary organization with sectional field hierarchy. Replace fashion-styling contrast with woven structural contrast. Replace generic decorative order with Bomkai-born loom logic. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through Bomkai textile architecture, not realism. If objects or environment are present, they must also be rebuilt through Bomkai's internal order instead of remaining generic.

Let the image gain more dimensional life, richer structural form, more imaginative layering, and stronger whole-frame coherence. But do not turn it into a fashion render, embossed textile object, or realism with Bomkai border added afterward.

Do not style only the textile surface. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through a creative artisan translation of Bomkai**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **fully resolved believable real-world 3D translation of Bomkai from Odisha**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable volumetric world**.

Keep the same deep Bomkai visual intelligence fully unchanged: saree-architecture identity, body-border-pallu hierarchy, woven field-and-border intelligence, structured decorative contrast, handloom cloth memory, sectional order, and Bomkai-born compositional logic. Do not turn this into generic ethnic fashion realism, printed textile styling, decorative fabric mood, or cinematic scene illustration with Bomkai cloth added on top.

Now convert that same grammar into a believable volumetric world. The result must have believable volume, believable woven material behavior, believable light on cloth and structure, believable spatial separation, believable object presence, and believable three-dimensional world logic. But every visible part of the image must still be generated by Bomkai grammar.

If figures are present, they must be rebuilt through Bomkai-born structure, not normal anatomy wearing Bomkai cloth. If objects appear, they must be shaped through Bomkai sectional order. If environment appears, it must be generated by body-border-pallu intelligence, structural contrast, sectional hierarchy, and loom-born organization. The world must not become ordinary reality with a Bomkai saree inserted into it.

Depth must now become full scene-world depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in border, pallu, costume, or props. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **Bomkai itself has become a believable full world**.

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED BOMKAI WORLD]** in the **fully resolved believable real-world 3D translation of Bomkai from Odisha**.

Keep unchanged:

- saree-architecture identity
- body-border-pallu hierarchy
- woven field-and-border intelligence
- structured decorative contrast
- handloom cloth memory
- sectional order
- Bomkai compositional DNA
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN GROUP / MAIN FIELD]** becomes a fully embodied Bomkai-built presence with believable woven material behavior and sectional order
- **[SECONDARY FORMS / SUPPORT FIELDS]** also remain under the same Bomkai-born logic
- **[BODY / BORDER / PALLU / EMPHASIS ZONES / TEXTILE FIELDS]** become volumetric world-organizing elements still governed by loom-born structure
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by Bomkai sectional intelligence rather than generic realism
- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all remain Bomkai-born, not realism-first

Increase:

- volumetric world-building
- woven material-light interaction
- spatial separation
- scene completeness
- object presence
- environmental orchestration
- full-frame readability

Do not lose:

- saree architecture
- field-border-pallu structure
- sectional contrast
- handloom order
- woven textile logic
- Bomkai world organization
- whole-frame Bomkai identity

Do not use:

- realistic ethnic fashion scene

- generic cinematic illustration
- style-as-border only
- style-as-cloth only
- premium finish overpowering source grammar
- reality with Bomkai flavor added later

Success condition:

the result feels like Bomkai itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with Bomkai.

Image-to-Image

Convert this source image into the **fully resolved believable real-world 3D translation of Bomkai from Odisha**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through Bomkai's source grammar translated into **full world-depth**.

Replace generic forms with Bomkai-built volumetric presences. Replace ordinary surfaces with sectional woven construction. Replace generic decorative order with body-border-pallu intelligence. Replace fashion-driven contrast with structural contrast. Replace generic environment space with a believable scene-world shaped by Bomkai field intelligence. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through Bomkai grammar, not realism.

Allow the result to gain complete volumetric embodiment, stronger woven material-light interaction, spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with Bomkai added later. The whole world must remain Bomkai-born.

Do not stylize only the fabric, border, or pallu while leaving the rest of the world generic. Do not make it an ethnic fashion scene. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable volumetric world generated by Bomkai itself**.
