

Khandua - Odisha

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Khandua from Odisha**, treating it as an **Odisha single-ikat ritual handloom system** built through tie-dyed yarn planning, border-body-anchal sectional intelligence, motif-bearing woven emergence, silk-and-cloth brilliance, and Jagannath-linked sacred textile dignity.

Build the image as if it genuinely belongs inside the native Khandua woven system itself. The image must be governed first by **single-ikat bandha logic**, not by print logic, painted ornament, embroidery simulation, or generic silk fashion styling. The cloth must feel handloom-made, bandha-born, structurally woven, and ritually grounded. Design must feel inside the cloth, not added onto it later.

The body field must remain readable as a woven zone with its own identity. The border must act as a structural carrier, not decorative trim only. The anchal or pallu must feel like an integrated intensified zone of the same cloth, not an unrelated decorative panel. Motifs such as conch, chakra, lotus, swan, peacock, parrot, deer, elephant, horse, lion, devadasi-related imagery, or Gitagovinda-based woven text/imagery must remain recognizable, but always through woven single-ikat logic rather than through painting or print.

Color must behave as radiant textile harmony, not cinematic grading or luxury-fashion gloss. Silk brilliance must remain structural and handloom-born. If the cloth is shown draped, folded, hanging, or worn, the border-body-anchal hierarchy must remain readable under cloth movement. If figures or broader image-world forms appear, faces, bodies, objects, and environment must still be rebuilt through Khandua-born sectional order and ritual textile intelligence rather than generic realism.

Do not make this generic Odisha silk, generic ikat print, decorative border styling, printed motifs on silk, boutique devotional luxury cloth, or realism with Khandua-like accents added later. The final result must feel like **the real Khandua ritual handloom system itself made the whole image**.

Reusable Variable Template

Create [SUBJECT / TEXTILE IMAGE / FIGURAL TEXTILE IMAGE / RITUAL CLOTH SYSTEM] in the **pure authentic source-truth visual logic of Khandua from Odisha**.

Style system that must remain unchanged:

- single-ikat / bandha identity
- border-body-anchal sectional hierarchy
- woven motif emergence
- ritual-textile dignity
- silk-and-cloth brilliance
- chromatic textile harmony
- handloom cloth identity
- whole-frame Khandua consistency

Translate the image like this:

- **[MAIN FIELD / MAIN FORM / MAIN FIGURE IF PRESENT]** becomes a Khandua-built presence governed by sectional woven order
- **[BODY FIELD]** remains structurally woven and readable
- **[BORDER FIELD]** acts as an integrated structural carrier, not trim
- **[ANCHAL / PALLU / EMPHASIS ZONE]** becomes a connected intensified woven zone
- **[MOTIFS / SYMBOLS / TEXT / DECORATIVE ELEMENTS]** remain recognizable but always feel woven through single-ikat logic
- **[DRAPE / HANG / BASE CLOTH BODY]** preserves handloom movement without destroying design hierarchy
- **[IF FIGURES OR OBJECTS APPEAR]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all be reorganized through Khandua textile order, not realism

Keep:

- single-ikat emergence
- sectional textile order
- woven motif identity
- ritual dignity
- silk-textile brilliance
- handloom tactility
- whole-frame consistency

Avoid:

- generic Odisha silk mood
- generic ikat print
- decorative border-only styling
- printed or painted motifs
- fashion-luxury silk treatment
- anchal as unrelated panel
- realism with Khandua accents added later

The final result must feel like a true Khandua ritual textile system, not a modern silk image wearing Khandua cues.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Khandua from Odisha**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through Khandua grammar. Replace generic silk styling with single-ikat woven logic. Replace decorative surface treatment with border-body-anchal hierarchy. Replace printed or painted motif behavior with woven motif emergence. Replace generic richness with ritual-textile dignity and structural brilliance. Replace fashion-mood color with radiant textile harmony.

If the image includes drape or wearable cloth, keep the sectional order readable under movement. If figures or objects appear, they must also be reorganized through Khandua's internal structural logic rather than remain generic under styled fabric.

Do not simply add rich borders or temple motifs to the source image. Do not keep realism underneath. Do not let the anchal behave like a separate decorative insert. The final result must feel as if the original image has been fully reauthored inside the true source-truth Khandua woven system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **creative artisan translation of Khandua from Odisha**, preserving the same deep source grammar as the authentic source-truth version, but translating it into a **richer, more imaginative, more dimensional 2D + 3D hybrid visual system**.

Keep the core Khandua grammar fully unchanged: single-ikat / bandha identity, border-body-anchal sectional intelligence, woven motif emergence, ritual-textile dignity, silk-and-cloth brilliance, chromatic harmony, and Khandua-born compositional DNA. Do not turn this into generic silk fashion render, textile sample mockup, surface texture exercise, embossing effect, luxury cloth realism, or realism with Khandua surface styling.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal ritual cloth description, but it must also not become full realistic scene-world depth. It should become a **creative hybrid style-image** where Khandua's own internal sectional order generates richer form, stronger visual invention, and more dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and figure relations must all be rebuilt through Khandua's woven sectional intelligence. If objects appear, they must be shaped through border-body-anchal logic, motif-bearing order, and ritual-textile hierarchy. If environment appears, it must grow from Khandua's internal structure rather than remain generic. The textile architecture must become a larger organizing intelligence, not just fabric decoration.

Dimensionality must come from Khandua itself: from sectional hierarchy, single-ikat emergence, woven motif order, chromatic textile brilliance, ritual dignity, and handloom silk memory. Do not solve dimensionality through generic rendering habits, normal anatomy, realistic silk-world lighting, or a generic environment with Khandua cloth added on top.

Do not create:

textile mockup, craft simulation, embossing, relief effect, luxury silk ad-image, generic dimensional cloth render, or a generic dimensional image decorated later by Khandua.

The final result must feel like **the same Khandua grammar has entered a richer, more imaginative, more dimensional artisan translation without losing itself.**

Reusable Variable Template

Create **[SUBJECT / IMAGE / FIGURAL SYSTEM / RITUAL TEXTILE WORLD]** in the creative artisan translation of Khandua from Odisha.

Keep unchanged:

- single-ikat / bandha identity
- border-body-anchal hierarchy
- woven motif emergence
- ritual-textile dignity
- silk-and-cloth brilliance
- chromatic harmony
- handloom cloth memory
- Khandua compositional DNA
- whole-frame style consistency

Translate it into a richer dimensional hybrid visual system like this:

- **[MAIN FORM / MAIN FIGURE / MAIN GROUP / MAIN FIELD]** becomes a Khandua-built presence with more dimensional life, but still controlled by sectional textile order
- **[SECONDARY FORMS / SUPPORT FIELDS]** also transform through the same Khandua grammar rather than generic styling
- **[BODY / BORDER / ANCHAL / EMPHASIS ZONES]** become more spatially alive and structurally expressive while remaining woven-order based

- **[MOTIFS / SYMBOLS / TEXTILE SIGNS]** become more visually alive but stay single-ikat-born, not illustrated or printed
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all be rebuilt through Khandua organization
- **[IF ENVIRONMENT APPEARS]** it must grow from Khandua field separation, ritual dignity, and sectional order rather than realism

Increase:

- dimensional presence
- visual richness
- artisan-like reinterpretation
- hybrid 2D + 3D form
- structural clarity
- whole-frame transformation
- imaginative spatial layering

Do not use:

- textile sample mockup logic
- surface-texture-only translation
- embossing or relief tricks
- generic silk rendering
- realistic anatomy with styled cloth
- generic environment with Khandua overlay
- only clothing or border carrying the style

Success condition:

the result feels like the same Khandua style has been artistically translated into a richer dimensional hybrid system.

Failure condition:

the result feels like a generic dimensional image decorated later by Khandua.

Image-to-Image

Convert this source image into the **creative artisan translation of Khandua from Odisha**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through Khandua's internal grammar translated into a richer, more dimensional 2D + 3D hybrid visual system.

Replace generic textile behavior with border-body-anchal intelligence. Replace ordinary organization with sectional field hierarchy. Replace decorative silk richness with woven ritual-textile brilliance. Replace generic motif styling with woven emergence through Khandua logic. If figures are present, transform faces, bodies, silhouettes, posture, grouping,

object logic, and surrounding structure through Khandua textile architecture, not realism. If objects or environment are present, they must also be rebuilt through Khandua's internal order instead of remaining generic.

Let the image gain more dimensional life, richer structural form, more imaginative layering, and stronger whole-frame coherence. But do not turn it into a silk fashion render, embossed textile object, or realism with Khandua border added afterward.

Do not style only the textile surface. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through a creative artisan translation of Khandua**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **fully embodied world translation of Khandua from Odisha**, preserving the same deep source grammar of Khandua but extending it into a **believable, fully resolved, fully inhabitable dimensional world**. Do **not** interpret this as generic realism, cinematic realism, luxury silk realism, or a realistic world with Khandua motifs, borders, anchal, or costume details added later.

Keep the same deep Khandua system fully unchanged: **single-ikat / bandha identity, border-body-anchal sectional intelligence, woven motif emergence, ritual-textile dignity, silk-and-cloth brilliance, chromatic harmony, handloom material memory, and Khandua-born compositional order**. The image must not become realism-first. It must become **Khandua-first reality**.

The whole visible world must be generated by Khandua logic. Faces, bodies, hands, feet, posture, gesture, silhouette, drapery, hair logic, props, objects, trees, plants, ground, architecture, sky treatment, atmosphere if present, foreground, midground, background, empty space, and total scene structure must all belong to one uninterrupted Khandua-born visual language. If figures appear, they must not be normal realistic humans wearing Khandua cloth. If objects or environment appear, they must not be generic realism with Khandua styling added later. Every visible category must be translated through the same Khandua grammar.

Khandua must control reality through its own logic: **single-ikat emergence, border-body-anchal hierarchy, woven motif intelligence, ritual-textile dignity, silk-and-cloth brilliance, and sectional order** must become the generators of full world structure. The environment itself must be built through Khandua's internal organizing intelligence. The world must feel as if Khandua had enough dimensional power to generate complete reality by itself.

“Believable” here must mean: believable volume, believable spatial relation, believable material embodiment, believable environmental presence, believable world completeness, and believable inhabitable dimensional logic. It must **not** mean photoreal replacement, western realism takeover, cinematic takeover, normal anatomy takeover, naturalistic scenery takeover, or realistic finish stronger than Khandua grammar.

Motifs such as conch, chakra, lotus, swan, peacock, parrot, deer, elephant, horse, lion, devadasi-related imagery, and Gitagovinda-linked woven intelligence may remain present, but Khandua must not survive only in motifs. Even if all obvious textile decoration were removed, the image should still feel Khandua-born through body construction, face construction, shape logic, object logic, environment logic, spatial organization, and scene behavior. That is the absolute V3 test.

Do not create:

generic realism with Khandua added afterward, cinematic realism coated with traditional motifs, realistic humans with styled costume only, photoreal silk replacing the source grammar, normal foliage and architecture with Khandua flavor, luxury devotional-fashion imagery, premium render stronger than the style, or a world where the background belongs to another visual language. If only costume, border, anchal, or ornament carries the style, V3 has failed.

The final result must feel like **Khandua itself has taken over the whole world and generated complete reality through its own grammar.**

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED KHANDUA WORLD]** in the **fully embodied world translation of Khandua from Odisha.**

Keep unchanged:

- single-ikat / bandha identity
- border-body-anchal hierarchy
- woven motif emergence
- ritual-textile dignity
- silk-and-cloth brilliance
- chromatic harmony
- handloom material memory
- Khandua compositional DNA
- whole-frame style consistency

Translate the full image into Khandua-generated world reality like this:

- **[MAIN FIGURE / MAIN GROUP / MAIN FORM]** becomes a fully embodied Khandua-born presence, not a realistic subject with Khandua costume

- **[SECONDARY FIGURES / SECONDARY FORMS]** also remain under the same Khandua grammar
- **[BORDER / BODY / ANCHAL / MOTIF FIELDS / SYMBOLIC FORMS]** become world-organizing structural forces, not decorative surface zones only
- **[OBJECTS / PROPS / ARCHITECTURE / GROUND / PLANTS / SKY / ENVIRONMENT]** must all be rebuilt through Khandua's internal sectional, woven, ritual, and chromatic intelligence
- **[EMPTY SPACE / FOREGROUND / MIDGROUND / BACKGROUND]** must also belong to the same Khandua world-logic
- **[IF TEXTILE ELEMENTS ARE PRESENT]** they must not act as the only style carriers; the entire scene must already be Khandua-born

Increase:

- full world embodiment
- full environmental completion
- spatial separation
- figure-ground hierarchy
- object presence
- material-light behavior
- foreground-midground-background integration
- scene readability
- full-frame control by Khandua grammar

Do not lose:

- single-ikat identity
- border-body-anchal logic
- woven motif emergence
- ritual-textile dignity
- sectional order
- Khandua style-world identity
- uninterrupted whole-frame visual language

Do not use:

- generic realism
- cinematic realism
- realistic anatomy takeover
- naturalistic foliage takeover
- realistic architecture takeover
- luxury silk realism
- style surviving only in costume, border, anchal, motifs, or props
- realism underneath stylized surface

Success condition:

the image feels like Khandua itself has become a fully embodied, believable world.

Failure condition:

the image feels like reality has been coated with Khandua, or the style weakens as world depth increases.

Image-to-Image

Convert this source image into the **fully embodied world translation of Khandua from Odisha**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the **entire frame** through Khandua's deep source grammar. Do not merely place Khandua borders, anchal treatment, motifs, or silk texture onto the source. Instead, make the entire image-world become Khandua-born.

Replace generic realism with Khandua-controlled reality. Replace normal anatomy with Khandua-born face, body, silhouette, gesture, and drapery logic. Replace generic objects with Khandua-shaped object logic. Replace ordinary environment with Khandua-generated space, sectional order, woven motif intelligence, ritual dignity, silk-and-cloth brilliance, and single-ikat world structure. Replace generic atmosphere, sky, ground, and background with the same uninterrupted Khandua visual ontology.

Allow the image to gain full dimensional embodiment, environmental completion, spatial separation, figure-ground clarity, material-light behavior, and complete world coherence. But do **not** let realism become the governing system. If the output becomes a realistic world with Khandua decoration, it has failed. If only costume or ornament remains styled, it has failed. If the background becomes generic realism, it has failed.

The final result must feel like **the source image has been completely reauthored as a believable full world generated by Khandua itself**.
