

Khes - Punjab

V1 — Authentic Style

Universal Hard Prompt

Create an image in the pure authentic source-truth visual logic of Khes coverlet weaving from Punjab.

Treat this as a real woven household coverlet system, not as generic Punjabi blanket styling, not as boutique handloom decor, not as embroidery cloth, not as floor-rug logic, and not as a realistic scene with one checked textile added later.

Build the entire image as if it comes from true Khes intelligence:

cotton handloom structure,
broad coverlet and spread behavior,
repeated geometric woven field order,
checks, bands, stripes, and modular pattern rhythm,
coarse durable household tactility,
panel-width or joined-width memory where relevant,
wrap and cover use logic,
and dowry-household cloth memory.

The style must control the whole frame:

surface order,
field rhythm,
spread logic,
fold behavior,
cloth adjacency,
material tactility,
shape logic,
silhouette behavior,
and domestic placement.

If figures appear, do not build them as normal realistic people first.

Build them as presences that belong to the same coverlet world:

cloth-aware,
spread-aware,
woven-order-aware,
non-photoreal in logic,
and shaped by domestic textile adjacency rather than by realism-first anatomy.

Do not treat the surface like embroidered cloth.

Do not spread the design like Phulkari or Bagh.
Do not compress it like a durrie or floor-rug.
Do not flatten it into a generic plaid blanket.

The textile must still feel like Khes:
broad woven household coverlet,
structured geometric field,
substantial but flexible cotton cloth,
used in bedding, wrapping, covering, or domestic support,
and carrying lived household and trousseau memory.

Preserve true Khes identity:
coverlet-first,
woven-first,
broad spread logic,
coarse durable tactility,
repeated field order,
and Punjab-rooted domestic cloth presence.

Do not make it:
generic checked blanket,
vague rustic handloom fabric,
luxury bedding,
modern home-decor throw,
embroidered textile,
floor-rug compression,
or realism with one local plaid cloth used as decoration.

The final image must feel like the source Khes tradition itself made this image.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in the pure authentic source-truth visual logic of Khes coverlet weaving from Punjab.

Treat the style as a woven household coverlet system built from:
cotton handloom structure,
broad spread and wrap behavior,
repeated geometric field order,
checks, bands, stripes, or modular woven rhythm,
coarse domestic tactility,
panel-width logic where relevant,
and dowry-household cloth memory.

Core style system to preserve:
coverlet identity,

woven-first logic,
broad spread presence,
repeated field structure,
coarse durable material body,
domestic use-world,
whole-frame consistency.

Translate the image like this:

[MAIN FORMS / FIGURES / OBJECTS] must become spread-aware, woven-order-aware, and household-cloth-driven rather than generic realism

[FACES if present] must become simplified, cloth-compatible, non-photoreal, and structurally clear

[BODIES / DRAPERY if present] must obey woven spread logic, coverlet behavior, and domestic textile adjacency

[PROPS / OBJECTS] must feel placed, layered, folded, wrapped, or structured like household cloth systems

[ENVIRONMENT / BACKGROUND] must also inherit broad spread order, domestic textile adjacency, and woven material logic

Keep:

coverlet identity,
woven field order,
broad spread logic,
coarse cotton tactility,
domestic-use memory,
dowry-household dignity.

Avoid:

generic blanket styling,
vague rustic handloom mood,
embroidered textile behavior,
durrie-like floor compression,
boutique throw styling,
premium bedding language,
or one local cloth inside an unstylized world.

The final result must feel like true Khes itself generated the whole image.

Image-to-Image

Convert this source image into the pure authentic source-truth visual logic of Khes coverlet weaving from Punjab.

Preserve the source image's subject count, main action, pose relationships, and basic readability,
but rebuild the entire image through real Khes woven coverlet intelligence.

Replace normal realism with:
cotton handloom structure,
broad spread and wrap behavior,
repeated geometric woven field order,
check, band, and modular rhythm,
coarse durable household tactility,
and domestic cloth adjacency.

Do not merely place a checked blanket into the image.
Do not merely add rustic woven texture.
Do not turn the result into generic plaid fabric.
Do not keep realistic environment logic while only one textile changes.

Rebuild:
surface order through woven rhythm,
forms through broad coverlet logic,
folds and adjacency through household cloth behavior,
and the whole frame as one Khes-authored visual language.

The final result must feel like the source image has been completely re-authored by authentic Khes, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in V2 = authentic handcrafted dimensional translation of Khes coverlet weaving from Punjab.

Preserve the same deep source grammar of the style:
cotton handloom structure,
broad coverlet and spread logic,
repeated geometric woven field order,
checks, bands, stripes, and modular rhythm,
coarse durable cotton tactility,
panel-width memory where relevant,
and domestic / dowry cloth presence.

Now translate that same grammar into believable handcrafted dimensional form.

This must not become generic cloth realism.
This must not become a realistic blanket with local checks.
This must not become premium bedding or home-decor styling.

Dimensionality must come from the style itself:
through woven field order over form,
broad textile mass,
spread thickness,
fold logic,
drape logic,
coarse handloom tactility,
panel relation,
and household coverlet placement.

Allow:
moderate volume,
clearer cloth objecthood,
tactile material presence,
stronger fold and spread readability,
more believable broad-surface behavior,
handcrafted structural depth,
and stronger relation between textile and domestic world.

Figures or wider image-world elements, if present, must remain style-born:
not realism-first,
not interior-styling-first,
not generic humans with one local cloth.
They must inherit coverlet logic, textile adjacency, domestic spread order, and woven material intelligence.

Do not turn the branch into embroidery behavior.
Do not let it behave like durrie floor logic.
Do not let it become a boutique woven throw.
Do not let the environment stay generic while only the cloth gains style.

The whole image must feel like Khes has entered handcrafted dimensional space without losing itself.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V2 = authentic handcrafted dimensional translation of Khes coverlet weaving from Punjab.

Preserve the unchanged deep source core:
cotton handloom structure,
broad spread logic,
repeated woven field order,
checks, bands, stripes, modular rhythm,
coarse durable tactility,

panel-width memory where relevant,
and domestic-use cloth presence.

Translate the image into handcrafted dimensional form by increasing:
volume,
cloth objecthood,
fold and drape readability,
material tactility,
spread thickness,
household placement,
and woven-surface spatial presence.

Build the image like this:

[MAIN FORMS / OBJECTS] become handcrafted dimensional presences still governed by
broad coverlet logic and woven field order

[FACES if present] remain simplified, cloth-compatible, and non-photoreal, never realism-first
[BODIES / DRAPERY if present] gain dimensional body but still read as style-born through
coverlet adjacency and woven order

[PROPS / SUPPORTING OBJECTS] gain structure and tactility through household textile
relation, not generic realism

[ENVIRONMENT / BACKGROUND] gains textile-authored domestic structure, not generic
interior or cinematic realism

Keep:

coverlet identity,
woven field order,
broad spread behavior,
coarse cotton material body,
domestic textile dignity,
whole-frame consistency.

Avoid:

generic cloth realism,
blanket-photo logic,
premium home-decor styling,
embroidered surface behavior,
durrie-like compression,
or one woven textile inside an unstylized world.

The final image must feel like authentic Khes translated into handcrafted dimensional
presence.

Image-to-Image

Convert this source image into V2 = authentic handcrafted dimensional translation of Khes
coverlet weaving from Punjab.

Keep the source image's subject count, core action, and readability,
but rebuild the entire image through Khes woven coverlet grammar translated into
handcrafted dimensional form.

The image must no longer behave like normal cloth realism.

Replace that with:

cotton handloom memory,
broad spread logic,
repeated geometric woven order,
coarse durable tactility,
fold and drape structured by coverlet use,
and domestic textile adjacency.

Add:

moderate dimensional presence,
tactile cloth objecthood,
clear fold and spread readability,
broader textile mass,
and handcrafted space logic.

But do not let dimensionality come from generic realistic blanket rendering.
Do not keep normal interiors or bodies while only the cloth becomes local.
Do not build a normal room or domestic scene and then add Khes afterward.

Rebuild all visible elements so they feel born from Khes woven coverlet logic.
The result must feel like the source image has entered Khes's handcrafted dimensional
world, not that a rural coverlet has been placed into an ordinary scene.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in V3 = fully resolved believable real-world 3D translation of the same
source grammar of Khes coverlet weaving from Punjab.

Preserve the same unchanged deep style-core:

cotton handloom structure,
broad coverlet and spread logic,
repeated geometric woven field order,
checks, bands, stripes, and modular woven rhythm,
coarse durable cotton tactility,
panel-width or joined-width memory where relevant,
and domestic / dowry cloth presence.

Now push that same grammar into its most believable, fully embodied real-world 3D scene.

Real-world here means:
believable volume,
believable material behavior,
believable cloth presence,
believable spatial separation,
believable scene completion,
and believable full-frame readability.

It does NOT mean:
generic interior realism,
luxury bedding styling,
cinematic rural-home makeover,
or realism with one local coverlet added later.

The same style must still govern:
surface order,
spread behavior,
fold logic,
cloth adjacency,
shape logic,
material tactility,
domestic placement,
and any wider environment ordering.

Increase:
full volumetric embodiment,
material clarity,
cloth presence,
environmental completion,
attention control,
scene coherence,
and whole-frame readability.

But do not introduce a second visual language.
Do not let the world become generic realism while only one coverlet remains local.
Do not let the style survive only in checks or plaid.
Do not make V3 a prettier heritage version.
It must remain the same Khes grammar, fully embodied.

The final image must feel like Khes itself has become a believable real-world 3D cloth-world.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V3 = fully resolved believable real-world 3D translation of the same source grammar of Khes coverlet weaving from Punjab.

Keep the same unchanged deep style-core:
cotton handloom structure,
broad spread logic,
repeated woven field order,
checks, bands, stripes, modular rhythm,
coarse durable tactility,
panel-width memory where relevant,
and domestic-use cloth dignity.

Now fully embody that style into a believable 3D world.

Increase:
full volumetric depth,
material-light interaction,
cloth presence,
environment completion,
figure-ground separation,
focal clarity,
and whole-scene coherence.

Build the image like this:

[MAIN FORMS / OBJECTS] must be fully style-born and fully embodied, never generic realism with a local coverlet added
[FACES if present] must remain simplified, cloth-compatible, and non-photoreal in their logic
[BODIES / DRAPERY if present] must feel fully real in space, but still governed by broad coverlet logic and woven field order
[PROPS / SUPPORTING OBJECTS] must become fully present through household textile adjacency and material logic, not realism-first modeling
[ENVIRONMENT / BACKGROUND] must become a complete world that still behaves like Khes authored it

Keep unchanged:
coverlet ontology,
woven field order,
broad spread behavior,
coarse cotton material memory,
domestic cloth presence,
single visual language across the frame.

Avoid:
generic cinematic illustration,
premium heritage interior styling,
luxury bedding realism,
embroidered textile drift,
durrie floor-rug drift,
style only in checks,
or any second visual language overpowering the source grammar.

The final image must feel like the same Khes system has become fully embodied reality.

Image-to-Image

Convert this source image into V3 = fully resolved believable real-world 3D translation of the same source grammar of Khes coverlet weaving from Punjab.

Preserve the source image's subject count, core action, scene purpose, and main relationships,
but rebuild every visible element through Khes woven coverlet intelligence fully embodied as reality.

Replace ordinary realism with:
cotton handloom memory,
broad spread and wrap logic,
repeated geometric woven field order,
check, band, and modular rhythm,
coarse durable coverlet tactility,
fold and drape logic,
and domestic cloth adjacency.

Expand the source into:
fully embodied cloth presence,
believable material behavior,
clear spatial separation,
full environmental completion,
strong object adjacency,
and coherent real-world scene depth.

But keep the same source grammar intact.
Do not let realism replace the style.
Do not add Khes only as one local spread.
Do not let the background become generic realism.
Do not let V3 turn into a premium heritage or cinematic interior makeover.

Rebuild the entire frame so it feels like authentic Khes itself has become reality.
If the result feels like reality coated with a local woven blanket, it has failed.
If it feels like Khes embodied as a whole cloth-world, it is correct.
