

Pattachitra - Odisha

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **authentic source-faithful visual logic of the Pattachitra painting tradition of Odisha**, treating it as a **painted narrative-icon system** rooted in contour discipline, stylized figure construction, bounded image-field organization, structural ornament, symbolic spacing, and devotional-narrative clarity. Do not treat it as generic Indian folk décor, poster-like religious art, decorative border art, or realism with traditional motifs added later.

Build the entire image as if it genuinely belongs inside the original painted logic of Odisha Pattachitra. The image must be governed first by **clean, controlled contour**, not by soft shading or realism-first modeling. Figures must be built as **style-born painted presences**: stylized faces, deliberate eyes, controlled noses, restrained mouths, elegant body proportions, contour-led limbs, stylized hands, and drapery shaped by painted design rather than ordinary cloth realism. The body must obey the same image-law as the face.

Space must behave as a **bounded painted picture-field**, not as open naturalistic scene depth. Use symbolic spacing, compositional hierarchy, contained figure-ground relations, and controlled placement rather than atmospheric perspective or cinematic realism. Ornament must be structural: borders, floral or vegetal fillers, decorative intervals, patterned density, and surrounding detail should stabilize the frame and support the hierarchy instead of merely decorating it. Color must behave as **controlled painted color-fields held inside contour**, vivid and clear but not glossy, airbrushed, or cinematically graded.

The whole frame must remain under one style grammar: faces, bodies, costume, jewelry, props, foliage, animals, architecture, ground, and background must all feel generated by the same painted logic. The image should preserve narrative-devotional authority, iconic clarity, contour strength, ornamental discipline, and picture-field cohesion.

Do not allow generic realism, naturalistic anatomy, soft painterly modeling, poster-devotional aesthetics, random floral clutter, souvenir-panel flatness, vector-like decorative simplification, cinematic background realism, or surface-level motif transfer. The final result must feel like **the Pattachitra tradition itself made the image**.

Reusable Variable Template

Create **[SUBJECT / SCENE / NARRATIVE MOMENT]** in the **authentic source-faithful visual logic of the Pattachitra painting tradition of Odisha**, treating it as a contour-governed painted narrative-icon system rather than as generic traditional decoration.

Style system that must remain unchanged:

- contour is the main structural engine
- faces are stylized, icon-like, and image-governed
- bodies are contour-built, elegant, and non-naturalistic
- space is bounded picture-space, not open realism
- ornament is structural, not cosmetic
- color behaves as controlled painted fields
- composition is hierarchical and framed
- symbolism and narrative clarity remain stronger than realism

Translate the scene like this:

- **[MAIN FIGURE / MAIN GROUP]** becomes a style-born painted figure or group with controlled Pattachitra face grammar, body grammar, contour discipline, and symbolic authority
- **[SECONDARY FIGURES]** also obey the same figure law and cannot slip into generic anatomy
- **[PROPS / OBJECTS / ANIMALS / FOLIAGE]** become contour-led painted forms under the same ornamental and compositional system
- **[ENVIRONMENT / BACKGROUND]** becomes a bounded painted field with structured spacing, decorative support forms, and Pattachitra-style image order
- **[BORDER / FRAMING LOGIC IF NEEDED]** should reinforce picture-field containment and ornamental hierarchy

Keep:

- contour authority
- stylized figure logic
- picture-field organization
- structural ornament
- controlled vivid painted color
- devotional or symbolic image authority
- whole-frame consistency

Avoid:

- generic realism
- poster-like devotional art
- cinematic lighting logic
- ordinary anatomical bodies
- random decoration
- only costume or border carrying the style
- realistic environment with traditional motifs pasted on top

The final result must feel like a true Pattachitra image-world, not a modern illustration wearing traditional surface elements.

Image-to-Image

Convert this source image into the **authentic source-faithful visual logic of the Pattachitra painting tradition of Odisha**.

Preserve the source image's **subject count, core action, role relationships, major pose logic, and scene readability**, but rebuild the full image through Pattachitra grammar. Replace ordinary faces with stylized painted icon-faces. Replace generic bodies with contour-built painted figures. Replace realism-first space with a bounded painted picture-field. Replace random detail with structural ornament, framed hierarchy, symbolic spacing, and controlled decorative support.

Make the whole frame obey one painted logic: figures, drapery, hands, jewelry, props, animals, foliage, architecture, ground, and background must all be translated into the same contour-governed image system. Use controlled vivid painted color-fields, ornamental intervals, stylized compositional hierarchy, and clear narrative-devotional image authority.

Do not merely add a decorative border, big eyes, floral motifs, or Indian costume details on top of the original image. Do not keep realistic anatomy underneath. Do not let the background stay realistic while only the main figure becomes traditional. Do not turn the result into calendar-poster art, souvenir flat art, or a generic ornate religious illustration.

The final image must feel as if the original scene was fully reauthored inside the real painted logic of Odisha Pattachitra.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic handcrafted dimensional version of the Pattachitra painting tradition of Odisha**. Preserve the same deep source grammar of Pattachitra, but translate it into a believable handcrafted dimensional image-world without drifting into generic realism. This version must feel like the same painted narrative-icon system entering tactile, object-like, artisan dimensional presence.

Keep the source grammar unchanged: contour-led figure design, stylized icon-faces, elegant non-naturalistic body logic, bounded image-field intelligence, structural ornament, symbolic spacing, controlled painted color organization, and devotional-narrative clarity. Then

translate that same grammar into handcrafted dimensional presence. Dimensionality must come from Pattachitra itself, not from normal realism added underneath.

Faces must remain style-born, not portrait-real. Bodies must remain contour-built and decorative in rhythm, not anatomical studies. Ornament must remain structural and integrated into the frame. Space may gain more layered depth and objecthood, but it must still feel governed by painted picture-order rather than by camera realism. Materials should feel handcrafted, matte, tactile, and painterly-object based, as if the contour, color-fields, ornament, and image-law have acquired gentle dimensional presence while still remaining fully Pattachitra-rooted.

Environment must also inherit the style. Trees, animals, objects, architecture, ground forms, and framing elements must be reconstructed through the same contour-born, ornament-aware, composition-led grammar. The world should become more inhabitable and image-rich, but still clearly style-built. Color should remain controlled and style-organized, not cinematic grading. Light should reveal handcrafted depth without erasing contour or picture-law.

Do not turn the image into generic 3D illustration, ordinary realism with Indian ornament, costume-styled humans in a decorative setting, mild depth added to flat souvenir art, or cinematic realism with a Pattachitra border. The final result must feel like **Pattachitra translated into handcrafted dimensional presence while staying unmistakably Pattachitra-born**. This follows the locked translation logic that V2 should add dimensional presence while preserving the source grammar and preventing generic realism drift.

Reusable Variable Template

Create **[SUBJECT / SCENE / NARRATIVE MOMENT]** in the **authentic handcrafted dimensional version of the Pattachitra painting tradition of Odisha**.

Unchanged style-core that must remain intact:

- contour still drives the image
- faces remain stylized and icon-like
- body logic remains decorative, elegant, and non-naturalistic
- ornament remains structural
- color remains organized as style-controlled painted fields
- composition remains hierarchical and picture-field-aware
- symbolism and narrative clarity remain stronger than realism
- the whole frame remains under one Pattachitra grammar

Translate the scene like this:

- **[MAIN FIGURE / MAIN GROUP]** becomes a handcrafted dimensional Pattachitra-born presence, with style-led face design, contour-aware volume, and controlled body rhythm

- **[SECONDARY FIGURES]** become branch-consistent dimensional figures under the same painted grammar
- **[OBJECTS / PROPS / ANIMALS / FOLIAGE]** become tactile handcrafted forms generated by contour, ornament, and painted structure
- **[ENVIRONMENT / BACKGROUND]** becomes a style-built dimensional field, not generic realism
- **[BORDER / FRAMING IF USED]** remains structural and integrated into the dimensional image-world

Increase:

- handcrafted volume
- tactile objecthood
- figure-environment relation
- layered spatial readability
- material presence
- inhabited image-world feeling

Do not lose:

- contour authority
- stylized face-body logic
- ornamental discipline
- picture-field intelligence
- whole-frame consistency

Avoid:

- generic 3D illustration
- realism with traditional decoration
- cinematic environment realism
- ordinary human anatomy
- decorative motif overlay
- only costume or border carrying the style
- environment becoming more realistic than the figures

The final result must feel like the same Pattachitra system has entered believable handcrafted dimensional space.

Image-to-Image

Convert this source image into the **authentic handcrafted dimensional version of the Pattachitra painting tradition of Odisha**.

Preserve the source image's **subject count, primary action, pose relationships, and scene readability**, but reconstruct every visible element through Pattachitra's

contour-governed painted grammar, now translated into handcrafted dimensional presence. Figures must no longer behave like ordinary realism. Faces must remain stylized and icon-like. Bodies must remain contour-built and decorative in proportion. Ornament must remain structural. Color must remain style-controlled. Space must become more layered and inhabitable, but still governed by the picture-law of Pattachitra.

Translate the whole image-world, not just the costume or border. Hands, drapery, props, foliage, animals, architecture, ground, and environment must all inherit the same contour-born, ornament-aware, picture-field-rooted dimensional logic. Let the image gain tactile handcrafted volume and object-presence, but do not allow generic realism, camera-space realism, cinematic grading, or poster-like devotional polish to take over.

Do not simply add depth to a flat traditional painting look. Do not decorate a realistic image with Pattachitra motifs. Do not let the background turn ordinary while the focal figure remains stylized. The final result must feel like **the original image has been fully rebuilt as a handcrafted dimensional Pattachitra image-world.**

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **fully resolved believable real-world 3D version of the Pattachitra painting tradition of Odisha**. Preserve the same deep source grammar of Pattachitra, but now translate the entire style into its most complete, believable, fully embodied dimensional world. Real-world here does not mean replacing the style with generic realism. It means believable volume, material behavior, spatial separation, object presence, figure-ground clarity, and full environmental completion while the Pattachitra style-core still controls the whole frame. This matches the locked V3 clarification that realism here means believable volumetric world logic, not realism with motifs added later.

The source grammar must remain in command: contour-aware figure construction, stylized icon-faces, non-generic body logic, structural ornament, decorative hierarchy, controlled color organization, symbolic spacing, narrative clarity, and picture-law intelligence. Faces must still read as Pattachitra-born, not portrait-real. Bodies must still read as style-governed forms, not ordinary anatomical humans. Ornament must still structure the world instead of decorating it. Composition must still feel organized by Pattachitra image intelligence rather than by generic cinematic illustration habits.

Convert the full style into believable three-dimensional reality: richer material-light interaction, stronger depth, stronger object presence, fuller staging, clearer figure-ground separation, and more complete environmental orchestration. But every visible part of the world must remain generated by the style. Trees, animals, architecture, props, sky forms, ground rhythm, border logic if used, and decorative support forms must all remain Pattachitra-born. The environment cannot become ordinary realism around one stylized figure.

Color must remain style-controlled and structurally organized, not movie-graded. Space must become fully dimensional, but it must still be the same Pattachitra intelligence expanded into reality, not a generic cinematic world wearing Pattachitra costume. The final image must feel like **Pattachitra itself became a believable world**.

Do not create realism with motifs added later, generic cinematic illustration, mythological fantasy art, poster-like devotional cinema imagery, style surviving only in costume or border, realistic background trees with a “traditional” figure in front, or any second visual language layered over the source grammar.

Reusable Variable Template

Create **[SUBJECT / SCENE / NARRATIVE MOMENT]** in the **fully resolved believable real-world 3D version of the Pattachitra painting tradition of Odisha**.

What must remain unchanged:

- Pattachitra source grammar remains the driver
- faces remain stylized and style-born
- bodies remain non-generic and contour-conscious
- ornament remains structural
- composition remains hierarchy-led and symbolically organized
- color remains style-controlled
- the whole frame remains under one Pattachitra logic
- realism never replaces the source system

Translate the scene like this:

- **[MAIN FIGURE / MAIN GROUP]** becomes a fully embodied dimensional Pattachitra-born presence with stylized face grammar, style-built body logic, and strong figure authority
- **[SECONDARY FIGURES]** also become fully volumetric but remain under the same source grammar
- **[OBJECTS / PROPS / ANIMALS / FOLIAGE]** become believable dimensional forms shaped by Pattachitra contour, decorative order, and symbolic rhythm
- **[ENVIRONMENT / BACKGROUND]** becomes a fully completed world still governed by Pattachitra picture intelligence rather than generic realism
- **[BORDER / FRAMING IF PRESENT]** must integrate structurally into the world rather than sit as an external decorative add-on

Increase:

- full volumetric presence

- believable material-light interaction
- spatial separation
- figure-ground control
- environmental completion
- focal clarity
- whole-frame orchestration

Do not lose:

- source contour intelligence
- icon-figure logic
- ornamental hierarchy
- symbolic spacing
- style-born environment logic
- whole-frame consistency

Avoid:

- realism with traditional motifs added later
- generic cinematic illustration
- ordinary human anatomy
- realistic background with one stylized foreground figure
- costume-only styling
- border-only styling
- decorative overlay solutions
- neighboring-style drift such as Madhubani, miniature, or calendar-poster devotional art

The final result must feel like the entire Pattachitra grammar has become believable world-reality without changing the style-core.

Image-to-Image

Convert this source image into the **fully resolved believable real-world 3D version of the Pattachitra painting tradition of Odisha**.

Preserve the source image's **subject count, core action, relationship logic, and scene readability**, but rebuild every visible form through Pattachitra source grammar translated into a believable three-dimensional world. Replace generic faces with stylized Pattachitra-born faces. Replace ordinary bodies with style-ruled figure construction. Replace generic environment logic with Pattachitra-born spatial order. Replace surface decoration with structural ornament, contour-aware material identity, symbolic spacing, controlled color organization, and hierarchy-led composition.

Allow the image to become fully volumetric, materially believable, and environmentally complete, but do not let realism become the main visual driver. Every visible element must

still feel generated by the same style: figures, drapery, jewelry, hands, props, animals, trees, architecture, ground, decorative support forms, and the wider environment must all belong to one Pattachitra-born dimensional world.

Do not place traditional motifs on a realistic image. Do not let the style survive only in the costume, face decoration, or border. Do not turn the background into normal realism. Do not convert the scene into generic mythological fantasy art. The final result must feel like **the original image has been fully reauthored as a believable world generated by Pattachitra itself.**
