

Sambalpuri Bandha - Odisha

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Sambalpuri Bandha from Odisha**, treating it as a **western Odisha handloom bandha / ikat construction system** rather than generic ikat print, decorative geometric wallpaper, painted textile pattern, or fashion-surface styling.

Build the entire image as if it genuinely belongs inside the native Sambalpuri Bandha handloom world: resist-dyed yarn planning, woven pattern registration, bandha edge behavior, structured repeat logic, border-body-pallu textile architecture, clear color-pattern rhythm, and handloom textile tactility. The image must feel as though the design was created through tie-and-dye planning before weaving, not added later through print, paint, embroidery, or surface ornament.

Every visible pattern unit must feel **registration-born**, not illustrated. Checks, repeated motifs, border systems, field separations, and emphasis zones must behave like woven bandha structures resolved through the loom. Edges must not be digitally sharp like print and must not be painterly-soft like painting; they must feel like **Sambalpuri bandha edges** shaped by tied-yarn planning and handloom registration. Color must behave as a structural textile rhythm, not as atmospheric shading or fashion mood.

The full frame must remain under one bandha grammar: body field, border field, pallu or emphasis field, repeat systems, drape behavior if cloth is shown, and any expanded image logic must all feel generated by resist-dyed registration and handloom organization. If figures or expanded forms appear, they must still be rebuilt through bandha-born order rather than generic realism.

Do not make this generic ikat print, digital textile design, decorative wallpaper, painted geometric cloth, luxury fashion fabric render, or realism with Sambalpuri borders added later. The final result must feel like **the real Sambalpuri Bandha weaving system itself made the whole image**.

Reusable Variable Template

Create **[SUBJECT / TEXTILE FIELD / PATTERN SYSTEM / FIGURAL TEXTILE IMAGE]** in the **pure authentic source-truth visual logic of Sambalpuri Bandha from Odisha**, treating it as a western Odisha handloom bandha system, not as generic ikat styling.

Style system that must remain unchanged:

- bandha-before-weaving identity
- registration-born pattern logic
- woven bandha edge behavior
- border-body-pallu field architecture
- structured repeat intelligence
- clear color-pattern rhythm
- handloom textile tactility
- whole-frame Sambalpuri consistency

Translate the image like this:

- **[MAIN PATTERN FIELD / MAIN FORM / MAIN FIGURE IF PRESENT]** becomes a Sambalpuri bandha-built form generated through woven registration logic
- **[SECONDARY PATTERN ZONES / SUPPORT FORMS]** also obey the same resist-dyed pattern structure
- **[BORDERS / PALLU / EMPHASIS ZONES / CHECK SYSTEMS / MOTIF FIELDS]** remain structurally integrated into the textile architecture
- **[DRAPE / HANG / BASE CLOTH BODY]** must preserve handloom fabric behavior and registration continuity
- **[IF FIGURES OR OBJECTS APPEAR]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all be rebuilt through bandha order, not realism

Keep:

- registration intelligence
- woven repeat order
- border-field hierarchy
- bandha edge softness
- structural color rhythm
- handloom cloth body
- whole-frame bandha logic

Avoid:

- generic ikat print look
- decorative wallpaper repetition
- painted motif behavior
- digitally sharp printing
- gradient fashion shading
- luxury fabric realism with no bandha structure
- only the border carrying the style while the rest stays generic

The final result must feel like a true Sambalpuri Bandha handloom system, not a modern textile design wearing Sambalpuri cues.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Sambalpuri Bandha from Odisha**.

Preserve the source image's **subject count, core action, main relationships, and overall readability**, but rebuild the entire image through Sambalpuri bandha grammar. Replace printed or drawn pattern behavior with resist-dyed registration logic. Replace generic cloth design with border-body-pallu textile architecture. Replace flat graphic sharpness with woven bandha edge behavior. Replace decorative color with structural color rhythm. Replace generic surface styling with handloom cloth identity.

Every visible element must inherit the same system: pattern fields, repeated units, borders, emphasis zones, cloth body, drape, and any expanded forms must all feel like they emerge through tied-yarn planning and weaving rather than surface application. If figures or objects appear, they must also be reorganized through Sambalpuri registration intelligence instead of staying generic under styled fabric.

Do not simply place Sambalpuri borders or ikat-like blur onto the source image. Do not keep realism underneath. Do not let the image behave like fashion textile print, wallpaper, boutique fabric branding, or decorative cloth mockup. The final result must feel as if the original image has been fully reauthored inside the true source-truth bandha logic of Sambalpuri weaving.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **creative artisan translation of Sambalpuri Bandha from Odisha**, preserving the same deep source grammar as the authentic source-truth version, but translating it into a **richer, more imaginative, more dimensional 2D + 3D hybrid visual system**.

Keep the core Sambalpuri grammar fully unchanged: resist-dyed yarn planning, registration-born pattern logic, woven bandha edge behavior, border-body-pallu hierarchy, structured repeat intelligence, clear color-pattern rhythm, handloom material memory, and western Odisha bandha field order. Do not turn this into generic ikat styling, printed textile

design, luxury fabric realism, craft mockup, texture exercise, embossing effect, or realism with Sambalpuri surface treatment.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as flat source-truth cloth logic, but it must also not become full scene-world realism. It should become a **creative hybrid style-image** where Sambalpuri's own internal order generates richer form, layered spatiality, and imaginative dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and figure relations must all be rebuilt through Sambalpuri pattern intelligence, registration rhythm, and field hierarchy. If objects appear, they must be shaped through the same bandha order. If environment appears, it must grow from Sambalpuri's internal structure, not remain generic. Border, body, pallu, pattern zones, checks, intervals, and repeats must all become more compositionally alive and more structurally dimensional while remaining clearly Sambalpuri-born.

Dimensionality must come from the style itself: from registration rhythm, field separation, border-body-pallu architecture, repeat hierarchy, bandha edge behavior, woven order, and color-block rhythm. Do not solve dimensionality through generic rendering habits, generic human anatomy, realistic fabric simulation, or ordinary environmental depth.

Do not create:

craft simulation, textile sample board, embossing, bevel effect, generic 3D cloth render, fashion realism, printed ikat illusion, or a generic dimensional image decorated later by Sambalpuri.

The final result must feel like **the same Sambalpuri grammar has entered a richer, more imaginative, more dimensional artisan translation without losing itself.**

Reusable Variable Template

Create **[SUBJECT / IMAGE / FIGURAL SYSTEM / PATTERN FIELD / SYMBOLIC WORLD]** in the **creative artisan translation of Sambalpuri Bandha from Odisha.**

Keep unchanged:

- bandha-before-weaving identity
- registration-born pattern logic
- woven bandha edge behavior
- border-body-pallu hierarchy
- structured repeat intelligence
- clear color-pattern rhythm
- handloom material memory
- Sambalpuri compositional DNA
- whole-frame style consistency

Translate it into a richer dimensional hybrid visual system like this:

- **[MAIN FORM / MAIN FIGURE / MAIN GROUP / MAIN FIELD]** becomes a Sambalpuri-built presence with more dimensional life, but still controlled by registration and field order
- **[SECONDARY FORMS / SUPPORT FIELDS]** also transform through the same bandha grammar rather than generic styling
- **[BORDERS / PALLU / CHECKS / MOTIF ZONES / INTERVALS]** become more spatially alive and structurally expressive while remaining woven-order based
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all be rebuilt through Sambalpuri organization
- **[IF ENVIRONMENT APPEARS]** it must grow from Sambalpuri field separation, repeat hierarchy, and color-rhythm logic rather than realism

Increase:

- dimensional presence
- visual richness
- artisan-like reinterpretation
- hybrid 2D + 3D form
- structural clarity
- whole-frame transformation
- imaginative spatial layering

Do not use:

- craft mockup logic
- texture-only translation
- embossed or relief tricks
- generic 3D cloth rendering
- realistic anatomy with styled fabric
- generic environment with Sambalpuri overlay
- only clothing or background carrying the style

Success condition:

the result feels like the same Sambalpuri style has been artistically translated into a richer dimensional hybrid system.

Failure condition:

the result feels like a generic dimensional image decorated later by Sambalpuri.

Image-to-Image

Convert this source image into the **creative artisan translation of Sambalpuri Bandha from Odisha**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through Sambalpuri's internal grammar translated into a richer, more dimensional 2D + 3D hybrid visual system.

Replace generic pattern behavior with registration-born pattern logic. Replace ordinary organization with border-body-pallu field intelligence. Replace printed or painted edges with woven bandha edge behavior. Replace generic decorative styling with structured repeat order and color-rhythm logic. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through Sambalpuri pattern intelligence, not realism. If objects or environment are present, they must also be rebuilt through Sambalpuri field order instead of remaining generic.

Let the image gain more dimensional life, richer structural form, more imaginative visual layering, and stronger whole-frame coherence. But do not turn it into a craft sample, embossed textile object, generic 3D render, or realism with Sambalpuri pattern applied afterward.

Do not style only the textile surface. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through a creative artisan translation of Sambalpuri Bandha.**

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **fully resolved believable real-world 3D translation of Sambalpuri Bandha from Odisha**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable volumetric world.**

Keep the same deep Sambalpuri visual intelligence fully unchanged: bandha-before-weaving identity, registration-born pattern logic, woven bandha edge behavior, border-body-pallu hierarchy, structured repeat order, clear color-pattern rhythm, handloom material memory, and Sambalpuri field organization. Do not turn this into generic ethnic realism, fashion-world imagery, printed ikat aesthetics, decorative textile styling, or cinematic scene illustration with Sambalpuri fabric added on top.

Now convert that same grammar into a believable volumetric world. The result must have believable volume, believable handloom material behavior, believable light on woven form, believable spatial separation, believable object presence, and believable three-dimensional world logic. But every visible part of the image must still be generated by Sambalpuri grammar.

If figures are present, they must be rebuilt through Sambalpuri-born structure, not normal anatomy wearing Sambalpuri cloth. If objects appear, they must be shaped through Sambalpuri order. If environment appears, it must be generated by registration intelligence,

field hierarchy, repeat logic, color-rhythm structure, and bandha-born organization. The world must not become ordinary reality with Sambalpuri added later.

Depth must now become full scene-world depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, ornament behavior, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in clothing, borders, props, or textile inserts. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **Sambalpuri Bandha itself has become a believable full world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED BANDHA WORLD]** in the **fully resolved believable real-world 3D translation of Sambalpuri Bandha from Odisha.**

Keep unchanged:

- bandha-before-weaving identity
- registration-born pattern logic
- woven bandha edge behavior
- border-body-pallu hierarchy
- structured repeat intelligence
- clear color-pattern rhythm
- handloom material memory
- Sambalpuri compositional DNA
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN GROUP / MAIN FIELD]** becomes a fully embodied Sambalpuri-built presence with believable woven material behavior and bandha-held structure
- **[SECONDARY FORMS / SUPPORT FIELDS]** also remain under the same registration-born logic
- **[CHECKS / MOTIFS / BORDERS / PALLU ZONES / PATTERN FIELDS]** become volumetric world-organizing elements still governed by tie-dye registration and woven order
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by Sambalpuri field intelligence rather than generic realism
- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all remain Sambalpuri-born, not realism-first

Increase:

- volumetric world-building
- woven material-light interaction
- spatial separation
- scene completeness
- object presence
- environmental orchestration
- full-frame readability

Do not lose:

- registration logic
- bandha edge behavior
- border-body-pallu structure
- woven repeat order
- color-pattern rhythm
- handloom world organization
- whole-frame Sambalpuri identity

Do not use:

- realistic ethnic fashion scene
- generic cinematic illustration
- style-as-cloth only
- style-as-border only
- print logic with handloom texture added later
- premium finish overpowering source grammar

Success condition:

the result feels like Sambalpuri Bandha itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with Sambalpuri.

Image-to-Image

Convert this source image into the **fully resolved believable real-world 3D translation of Sambalpuri Bandha from Odisha**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through Sambalpuri's source grammar translated into **full world-depth**.

Replace generic forms with Sambalpuri-built volumetric presences. Replace ordinary surfaces with registration-born woven construction. Replace printed or painted edge logic with bandha-resolved structural behavior. Replace generic decorative color with structural color-rhythm logic. Replace generic environment space with a believable scene-world shaped by Sambalpuri field intelligence. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through Sambalpuri grammar, not realism.

Allow the result to gain complete volumetric embodiment, stronger woven material-light interaction, spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with Sambalpuri added later. The whole world must remain Sambalpuri-born.

Do not stylize only the fabric, border, or costume while leaving the rest generic. Do not make it an ethnic fashion scene. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable volumetric world generated by Sambalpuri itself.**
