

jutti surface logic - Punjab

V1 — Authentic Style

Universal Hard Prompt

Create an image in the pure authentic source-truth visual logic of traditional jutti surface ornament from Punjab.

Treat this as a real handcrafted upper-surface craft system built on a traditional jutti body, not as generic Punjabi festive fashion, not as boutique ethnic footwear styling, not as printed ornament, and not as a realistic object with decorative motifs added later.

Build the entire image as if it comes from true Punjab jutti surface intelligence:
traditional jutti body logic,
upper-zone hierarchy,
decorated panna and related upper-facing zones,
stitched assembly memory,
leather or textile upper base,
applied embroidery, tilla, metallic-thread, cutwork, bead, mirror, cowrie, bell, or related
handcrafted ornament,
object-surface tension,
and wearable ceremonial richness.

The style must control the whole frame:
object identity,
upper-zone emphasis,
surface hierarchy,
shape logic,
silhouette,
edge behavior,
seam logic,
material contrast,
ornament placement,
and wearable presence.

If figures appear, do not build them as normal realistic humans first.
Build them as presences that belong to the same upper-surface craft world:
ornament-aware,
object-zone-aware,
non-generic,
and shaped by applied-surface hierarchy rather than by realism-first anatomy.

Do not treat the surface like a flat textile field.
Do not spread the design like Phulkari or Bagh.
Do not make the ornament behave like print.
Do not flatten the jutti into a decorative panel.

The object must still feel like a traditional jutti:
compact footwear body,
upper-front readability,
crafted edge and seam relation,
ornament concentrated through upper-surface logic,
and wearable body-adjacent elegance.

Preserve true jutti surface identity:
footwear-object first,
upper-zone hierarchy first,
applied ornament on shaped surface,
base material memory,
stitched assembly memory,
and Punjab-rooted ceremonial craft presence.

Do not make it:
generic embellished flats,
generic mojari shorthand,
fashion accessory catalog design,
luxury product styling,
random rich ornament,
textile-field spread,
or realism with Punjabi decorative accents only.

The final image must feel like the source jutti tradition itself made this image.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in the pure authentic source-truth visual logic of traditional jutti surface ornament from Punjab.

Treat the style as a wearable upper-surface craft system built from:
traditional jutti body logic,
decorated upper zones,
leather or textile upper memory,
stitched assembly,
applied embroidery or metallic enrichment,
object-surface hierarchy,
and ceremonial wearable presence.

Core style system to preserve:

footwear-object identity,
upper-zone hierarchy,
applied ornament on shaped surface,
base material memory,
edge and seam logic,
craft-built assembly memory,
Punjab-rooted ornamental footwear intelligence,
whole-frame consistency.

Translate the image like this:

[MAIN FORMS / FIGURES / OBJECTS] must become shaped, ornament-aware, and object-surface-driven rather than generic realism

[FACES if present] must become simplified, crafted, non-photoreal, and surface-logic compatible

[BODIES / DRAPERY if present] must obey zone hierarchy, applied ornament logic, and wearable-object intelligence

[PROPS / OBJECTS] must feel built, edged, joined, and ornamented like crafted surfaces, not like normal realism

[ENVIRONMENT / BACKGROUND] must also inherit upper-surface hierarchy, object adjacency, and applied craft logic

Keep:

traditional jutti body memory,
upper emphasis,
surface tension over form,
stitched assembly behavior,
ornament discipline,
wearable ceremonial dignity.

Avoid:

generic Punjabi festive styling,
generic embroidered footwear,
random embellished flats,
printed-looking surface design,
Phulkari-like field spread,
fashion-catalog luxury feel,
or one decorated object inside an unstylized world.

The final result must feel like true Punjab jutti surface logic itself generated the whole image.

Image-to-Image

Convert this source image into the pure authentic source-truth visual logic of traditional jutti surface ornament from Punjab.

Preserve the source image's subject count, main action, pose relationships, and basic readability,
but rebuild the entire image through real jutti upper-surface craft intelligence.

Replace normal realism with:
traditional jutti body logic,
decorated upper-zone hierarchy,
leather or textile upper memory,
stitched assembly behavior,
applied embroidery, metallic-thread, cutwork, or related ornament on shaped surface,
and wearable ceremonial object presence.

Do not merely place Punjabi ornament on a realistic shoe.
Do not merely add rich embroidery or tilla to a normal object.
Do not spread the decoration like a flat textile field.
Do not keep realistic product logic while only surface motifs change.

Rebuild:
object forms through upper-surface hierarchy,
ornament through applied craft logic,
edges and seams through handcrafted assembly memory,
and the whole frame as one jutti-authored visual language.

The final result must feel like the source image has been completely re-authored by
authentic Punjab jutti surface logic, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in V2 = authentic handcrafted dimensional translation of traditional jutti
surface ornament from Punjab.

Preserve the same deep source grammar of the style:
traditional jutti body logic,
upper-zone hierarchy,
decorated panna and related visible zones,
leather or textile base memory,
stitched assembly behavior,
applied embroidery, metallic-thread, cutwork, or related ornament,
and wearable ceremonial craft presence.

Now translate that same grammar into believable handcrafted dimensional form.

This must not become generic product realism.
This must not become a premium accessory image.
This must not become a realistic shoe with Indian decoration added later.

Dimensionality must come from the style itself:
through upper curvature,
surface tension,
panel relation,
stitched joins,
edge articulation,
ornament sitting on material,
base-versus-highlight contrast,
and shaped-surface craft presence.

Allow:
moderate volume,
clearer objecthood,
tactile material presence,
stronger edge and seam readability,
more believable upper-body curvature,
handcrafted structural depth,
and stronger relation between ornament and footwear form.

Figures or wider image-world elements, if present, must remain style-born:
not realism-first,
not fashion-editorial,
not generic humans with ethnic accessories.
They must inherit object-surface logic, zone hierarchy, and applied ornament intelligence.

Do not flatten the style into graphic decoration.
Do not let ornament float above the form.
Do not let the object lose traditional jutti identity.
Do not let the environment become generic realism while only the footwear stays
source-aware.

The whole image must feel like traditional jutti surface logic has entered handcrafted
dimensional space without losing itself.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V2 = authentic handcrafted dimensional
translation of traditional jutti surface ornament from Punjab.

Preserve the unchanged deep source core:
traditional jutti body logic,
upper-zone hierarchy,

leather or textile upper memory,
stitched assembly behavior,
applied ornament on shaped surface,
craft-built edge logic,
and wearable ceremonial dignity.

Translate the image into handcrafted dimensional form by increasing:
volume,
objecthood,
surface tension,
material tactility,
edge clarity,
seam readability,
ornament-to-form relation,
and shaped-surface spatial presence.

Build the image like this:

[MAIN FORMS / OBJECTS] become handcrafted dimensional presences still governed by upper-zone logic and applied ornament hierarchy

[FACES if present] remain simplified, crafted, and non-photoreal, never realism-first

[BODIES / DRAPERY if present] gain dimensional body but still read as style-born through object-surface logic

[PROPS / SUPPORTING OBJECTS] gain structure and tactility through crafted assembly and zone behavior, not generic realism

[ENVIRONMENT / BACKGROUND] gains craft-authored structure, not generic cinematic or product-stage realism

Keep:

traditional jutti body memory,
upper-surface hierarchy,
applied ornament discipline,
base material contrast,
stitched assembly logic,
wearable object presence.

Avoid:

generic 3D product realism,
fashion-commercial footwear rendering,
premium accessory polish,
random Punjabi festive design,
textile-field spread,
ornament pasted onto realism,
or one styled object inside an unstylized world.

The final image must feel like authentic jutti surface logic translated into handcrafted dimensional presence.

Image-to-Image

Convert this source image into V2 = authentic handcrafted dimensional translation of traditional jutti surface ornament from Punjab.

Keep the source image's subject count, core action, and readability, but rebuild the entire image through jutti upper-surface craft grammar translated into handcrafted dimensional form.

The image must no longer behave like normal realism.

Replace that with:

traditional jutti body memory,
upper-zone hierarchy,
surface tension over curved form,
stitched assembly logic,
applied ornament on shaped surface,
material contrast between base and embellishment,
and wearable ceremonial craft presence.

Add:

moderate dimensional presence,
tactile objecthood,
clear seam and edge readability,
believable ornament-to-surface relation,
and handcrafted space logic.

But do not let dimensionality come from generic product realism.

Do not keep normal realistic accessory logic under traditional decoration.

Do not build a normal footwear object and then add jutti ornament afterward.

Rebuild all visible elements so they feel born from traditional jutti upper-surface craft logic.

The result must feel like the source image has entered jutti's handcrafted dimensional world, not that decoration has been placed on top of an ordinary object.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in V3 = fully resolved believable real-world 3D translation of the same source grammar of traditional jutti surface ornament from Punjab.

Preserve the same unchanged deep style-core:

traditional jutti body logic,
upper-zone hierarchy,
decorated panna and related visible zones,
leather or textile base memory,

stitched assembly behavior,
applied embroidery, metallic-thread, cutwork, or related ornament,
and wearable ceremonial craft presence.

Now push that same grammar into its most believable, fully embodied real-world 3D scene.

Real-world here means:
believable volume,
believable material behavior,
believable object presence,
believable spatial separation,
believable scene completion,
and believable full-frame readability.

It does NOT mean:
generic product realism,
luxury fashion-accessory styling,
cinematic accessory makeover,
or realism with Punjabi ornament added later.

The same style must still govern:
object identity,
upper-zone hierarchy,
surface behavior,
shape logic,
ornament placement,
material contrast,
edge logic,
seam logic,
wearable presence,
and any wider environment ordering.

Increase:
full volumetric embodiment,
material clarity,
object presence,
environmental completion,
attention control,
scene coherence,
and whole-frame readability.

But do not introduce a second visual language.
Do not let the world become generic realism while only ornament remains traditional.
Do not let the style survive only in metallic accents or embroidery highlights.
Do not make V3 a prettier luxury version.
It must remain the same traditional jutti surface grammar, fully embodied.

The final image must feel like jutti surface logic itself has become a believable real-world 3D object-world.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V3 = fully resolved believable real-world 3D translation of the same source grammar of traditional jutti surface ornament from Punjab.

Keep the same unchanged deep style-core:
traditional jutti body logic,
upper-zone hierarchy,
applied ornament on shaped surface,
base material memory,
stitched assembly logic,
wearable ceremonial dignity,
and Punjab-rooted upper-surface craft intelligence.

Now fully embody that style into a believable 3D world.

Increase:
full volumetric depth,
material-light interaction,
object presence,
environment completion,
figure-ground separation,
focal clarity,
and whole-scene coherence.

Build the image like this:
[MAIN FORMS / OBJECTS] must be fully style-born and fully embodied, never generic realism with decoration
[FACES if present] must remain crafted, non-photoreal, and compatible with object-surface grammar
[BODIES / DRAPERY if present] must feel fully real in space, but still governed by upper-zone hierarchy and applied ornament logic
[PROPS / SUPPORTING OBJECTS] must become fully present through crafted edge, assembly, and surface logic, not realism-first modeling
[ENVIRONMENT / BACKGROUND] must become a complete world that still behaves like traditional jutti craft authored it

Keep unchanged:
footwear-object ontology,
upper-zone hierarchy,
applied ornament discipline,
base-versus-highlight material behavior,
assembly memory,

wearable craft identity,
single visual language across the frame.

Avoid:

generic cinematic illustration,
luxury accessory realism,
fashion-editorial finish,
ordinary embellished-footwear styling,
Phulkari-like surface spread,
style only in decoration,
or any second visual language overpowering the source grammar.

The final image must feel like the same jutti surface system has become fully embodied reality.

Image-to-Image

Convert this source image into V3 = fully resolved believable real-world 3D translation of the same source grammar of traditional jutti surface ornament from Punjab.

Preserve the source image's subject count, core action, scene purpose, and main relationships,
but rebuild every visible element through traditional jutti upper-surface craft fully embodied as reality.

Replace ordinary realism with:
traditional jutti body memory,
upper-zone hierarchy,
ornament on shaped surface,
leather or textile base logic,
stitched assembly behavior,
base-and-highlight material contrast,
and wearable ceremonial craft presence.

Expand the source into:
fully embodied forms,
believable material presence,
clear spatial separation,
full environmental completion,
strong object presence,
and coherent real-world scene depth.

But keep the same source grammar intact.
Do not let realism replace the style.
Do not add jutti ornament only as an accessory layer.
Do not let the background become generic realism.

Do not let V3 turn into a luxury or cinematic accessory makeover.

Rebuild the entire frame so it feels like authentic Punjab jutti surface logic itself has become reality.

If the result feels like reality coated with jutti styling, it has failed.

If it feels like jutti surface logic embodied as a whole object-world, it is correct.
