

Zardozi - Uttar Pradesh

if translated beyond textile

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Zardozi from Uttar Pradesh**, treating it as a **Lucknow-rooted metallic hand-embroidery system** built through **karchob-frame cloth construction, zari and metal-wire ornament, raised relief embroidery, floral-vine-trellis courtly motif logic, Mughal ceremonial memory, and dense but controlled Lucknow refinement**.

Build the image as if it genuinely belongs inside the native Lucknow zardozi craft world itself. The image must be governed first by **stretched cloth on karchob, hand-built metallic embroidery, raised relief, zari-and-wire construction, and courtly ornamental structure**, not by brocade weaving, printed gold florals, machine-made metallic patterning, sequins-only glamour, or generic festive surface styling.

The support must feel like real cloth held under tension for embroidery, not loose decorative fabric and not a woven brocade field. The ornament must feel constructed through hand embroidery using metallic materials such as zari, wire, dabka-like coiled relief, salma-like wire elements, sitara-like accents, and related metallic embroidery logic. The surface must feel **slightly raised, tactile, dense, and hand-built**, not flat gold design and not simple glitter.

The motif world must remain **courtly, connected, and ornamental**: floral sprays, buds, vines, creepers, trellis networks, and other Mughal-derived luxury surface structures. The ornament must spread through the field with controlled density, not isolated decorative stickers. The result must carry ceremonial dignity and Lucknow refinement rather than loud bridal excess.

The image must feel like **actual metallic embroidery on cloth**, not like metallic decoration placed later. Do not make it woven like Banarasi brocade, do not make it printed, do not make it lace-like, and do not make it generic luxury sparkle. The final result must feel like **the real zardozi system itself made the whole image**.

Reusable Variable Template

Create **[SUBJECT / EMBROIDERED TEXTILE SURFACE / CEREMONIAL OBJECT SURFACE / LUCKNOW METALLIC EMBROIDERY FIELD]** in the pure authentic source-truth visual logic of Zardozi from Uttar Pradesh.

Style system that must remain unchanged:

- cloth-surface identity
- karchob-frame construction logic
- raised metallic embroidery relief
- zari-and-wire-built surface intelligence
- floral-vine-trellis courtly motif grammar
- Mughal ceremonial memory
- Lucknow refinement
- whole-frame zardozi consistency

Translate the image like this:

- **[MAIN CLOTH FIELD / MAIN GARMENT ZONE / MAIN SURFACE AREA]** becomes a zardozi-built embroidered presence governed by stretched-cloth embroidery order
- **[METALLIC MATERIAL / ZARI / WIRE / DABKA-LIKE RELIEF / SALMA-LIKE ELEMENTS / SITARA-LIKE ACCENTS]** must feel hand-inserted and structurally built into the embroidery
- **[RAISED SURFACE / RELIEF / TACTILE BUILD-UP / LAYERED ORNAMENT]** must feel dense but controlled, not flat and not glitter-based
- **[FLORAL / VINE / TRELLIS / BUD / CREEPER MOTIF SYSTEM]** must feel connected, courtly, and embroidery-born
- **[FIELD DISTRIBUTION / BORDERS / FRONTS / CUFFS / HEMS / OBJECT EMPHASIS ZONES]** must feel placement-aware and ceremonial
- **[IF FIGURES / OBJECTS / ARCHITECTURE APPEAR]** faces, bodies, posture, object logic, and environment logic must all be reorganized through zardozi embroidery order, not realism

Keep:

- metallic hand-embroidery identity
- frame-built surface order
- raised relief
- connected ornamental spread
- ceremonial density
- courtly restraint
- Lucknow elegance
- whole-frame consistency

Avoid:

- brocade weave
- printed metallic pattern
- machine embroidery
- sequins-only glamour

- generic bridal styling
- lace-like metallic net
- flat gold decoration
- realism with zardozi accents added later

The final result must feel like a true Lucknow metallic embroidery system, not a festive fashion surface wearing zardozi cues.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Zardozi from Uttar Pradesh**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through zardozi grammar. Replace generic decoration with karchob-built metallic hand embroidery. Replace flat shine with raised relief. Replace random luxury surface styling with connected floral-vine-trellis courtly ornament. Replace generic festive richness with Mughal ceremonial dignity and Lucknow refinement.

If the image includes cloth or object surfaces, make them feel stretched, worked, and embroidery-built. If the image includes motifs, make them feel constructed through zari, wire, dabka-like relief, and hand-guided ornamental spread. If the image includes figures, objects, or environment, they must also be reorganized through zardozi metallic embroidery logic rather than remain generic underneath an embellished patch.

Do not simply add gold motifs, sequins, or floral sparkle to the source image. Do not keep woven, printed, or machine-made logic underneath. Do not let it behave like brocade or generic bridal glamour. The final result must feel as if the original image has been fully reauthored inside the true source-truth zardozi system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic dimensional translation of Zardozi from Uttar Pradesh**, preserving the same deep source grammar as the authentic source-truth version, but translating it into a **richer, more dimensional, more image-complete embroidered world while staying fully embroidery-born**.

Keep the core zardozi grammar fully unchanged: cloth-surface identity, karchob-frame order, raised metallic embroidery relief, zari-and-wire construction, floral-vine-trellis courtly motif

grammar, Mughal ceremonial memory, and Lucknow refinement. Do not turn this into couture glamour styling, decorative metallic fashion rendering, brocade-like luxury cloth, printed gold ornament, or sequins-first bridal concept art.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal garment or accessory documentation, but it must also not become full realism-world depth. It should become a **creative hybrid metallic-embroidery image system** where zardozi's own hand-built surface intelligence generates richer form, stronger material layering, and more dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and relations must all be rebuilt through zardozi logic. If objects appear, they must be shaped through metallic relief hierarchy, embroidery density, and courtly ornamental spread. If environment appears, it must grow from embroidered-surface intelligence and ceremonial object logic rather than remain generic. The embroidery system must become the larger organizing intelligence, not just a decorative overlay.

Dimensionality must come from zardozi itself: from wire layering, raised relief, connected vine-and-trellis spread, controlled density, metallic light response, and frame-built cloth discipline. Do not solve dimensionality through generic rendering habits, glamour mood, or ordinary realism with one embellished surface.

Do not create:

couture embellishment mockups, metallic bridal fashion styling, brocade simulation, decorative gold concept fabric, or a generic dimensional image decorated later by zardozi.

The final result must feel like **the same zardozi grammar has entered a richer, more dimensional embroidered world without losing its construction logic.**

Reusable Variable Template

Create **[SUBJECT / IMAGE / METALLIC EMBROIDERY WORLD / LUCKNOW ZARDOZI SURFACE SYSTEM]** in the **authentic dimensional translation of Zardozi from Uttar Pradesh.**

Keep unchanged:

- cloth-surface identity
- karchob-frame process logic
- raised metallic embroidery relief
- zari-and-wire construction logic
- floral-vine-trellis courtly motif grammar
- Mughal ceremonial memory
- Lucknow refinement
- whole-frame style consistency

Translate it into a richer dimensional embroidered world like this:

- **[MAIN CLOTH FIELD / MAIN GARMENT FRONT / MAIN EMBROIDERED SURFACE]** becomes a zardozi-built presence with more dimensional life, but still governed by hand-built metallic embroidery order
- **[SECONDARY FIELDS / BORDER ZONES / CUFFS / HEMS / OBJECT SURFACES]** also transform through the same zardozi grammar rather than generic styling
- **[RAISED RELIEF / WIRE LAYERING / ZARI STRUCTURE / METALLIC TEXTURE / DENSITY HIERARCHY]** become more spatially alive and structurally expressive while remaining embroidery-born
- **[FLORAL / BUD / VINE / TRELLIS / CREEPER SYSTEMS]** must remain connected and courtly, not decorative scatter
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, object logic, and environment logic must all be rebuilt through zardozi order
- **[IF ENVIRONMENT APPEARS]** it must grow from metallic embroidery intelligence, courtly object logic, and Lucknow refinement rather than realism

Increase:

- dimensional presence
- material layering
- relief clarity
- visual richness
- structural hierarchy
- whole-frame transformation
- embroidery-world depth

Do not use:

- brocade-like luxury fabric logic
- printed metallic pattern logic
- machine-embroidery cleanliness
- sequins-first bridal glamour
- generic environment with zardozi overlay
- only one embellished patch carrying the style
- gold sparkle replacing relief structure

Success condition:

the result feels like the same zardozi grammar has been translated into a richer dimensional embroidery-world.

Failure condition:

the result feels like a generic luxurious surface decorated later by zardozi.

Image-to-Image

Convert this source image into the **authentic dimensional translation of Zardozi from Uttar Pradesh**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through zardozi's internal grammar translated into a richer, more dimensional metallic-embroidery world.

Replace generic ornament with karchob-built hand embroidery. Replace flat shine with layered relief. Replace decorative gold richness with real zari-and-wire structure. Replace random luxury florals with connected floral-vine-trellis courtly systems. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through zardozi embroidery logic, not realism. If objects or environment are present, they must also be rebuilt through metallic raised-surface intelligence instead of remaining generic.

Let the image gain more dimensional life, richer relief, stronger material hierarchy, and better whole-frame coherence. But do not turn it into couture concept art, brocade styling, or generic glamour with embroidery added afterward.

Do not style only one neckline, border, or object patch. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through a dimensional translation of zardozi**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **world-depth translation of Zardozi from Uttar Pradesh**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable full world**.

Keep the same deep zardozi visual intelligence fully unchanged: cloth-surface identity, karchob-frame order, raised metallic embroidery relief, zari-and-wire construction logic, floral-vine-trellis courtly motif grammar, Mughal ceremonial memory, and Lucknow refinement. Do not turn this into generic realism, bridal-fashion realism, luxury palace realism, or a normal world with one embroidered garment or patch added on top.

Now convert that same grammar into a believable full world. The result must have believable material behavior, believable spatial separation, believable object presence, believable environmental completion, and believable three-dimensional world logic. But every visible part of the image must still be generated by zardozi grammar.

If figures are present, they must be rebuilt through zardozi-born metallic embroidery structure, not normal realism wearing embellished clothing. If objects appear, they must be shaped through raised relief hierarchy, wire-and-zari construction, and courtly ornamental

spread. If environment appears, it must be generated by embroidery-born surface logic, trellis-and-vine structural growth, ceremonial density, and Lucknow refinement. The world must not become ordinary reality with one zardozi insert into it.

Depth must now become full world-depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in one lehenga, one border, one bag, one panel, one neckline, or one metallic floral patch. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **zardozi itself has become a believable full world**.

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED ZARDOZI WORLD]** in the **world-depth translation of Zardozi from Uttar Pradesh**.

Keep unchanged:

- cloth-surface identity
- karchob-frame order
- raised metallic embroidery relief
- zari-and-wire construction logic
- floral-vine-trellis courtly motif grammar
- Mughal ceremonial memory
- Lucknow refinement
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN EMBROIDERED SURFACE / MAIN ORNAMENTAL MASS]** becomes a fully embodied zardozi-built presence with believable embroidery-world logic
- **[SECONDARY FORMS / SUPPORT FIELDS / BORDER ZONES / OBJECT SURFACES]** also remain under the same zardozi-born logic
- **[RELIEF / WIRE / ZARI / METALLIC TEXTURE / ORNAMENTAL DENSITY / TRELLIS NETWORKS]** become world-organizing elements still governed by metallic embroidery structure
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by zardozi embroidery intelligence rather than generic realism
- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, object logic, and environment logic must all remain zardozi-born, not realism-first

Increase:

- full world embodiment
- material-light interaction
- spatial separation
- object presence
- environmental orchestration
- relief-to-world transformation
- whole-frame readability

Do not lose:

- embroidery-born identity
- karchob-built order
- raised metallic relief
- floral-vine-trellis structure
- ceremonial density
- courtly refinement
- Lucknow elegance
- whole-frame zardozi identity

Do not use:

- realistic world with one embroidered garment
- generic cinematic luxury scene
- style-as-embellished patch only
- style-as-gold shine only
- style-as-floral motif only
- style-as-sparkle only
- premium finish overpowering craft structure
- reality with zardozi flavor added later

Success condition:

the result feels like zardozi itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with zardozi.

Image-to-Image

Convert this source image into the **world-depth translation of Zardozi from Uttar Pradesh**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through zardozi's source grammar translated into **full world-depth**.

Replace generic forms with zardozi-built metallic-embroidery volumetric presences. Replace ordinary surfaces with karchob-born raised embroidery construction. Replace generic decorative order with wire-and-zari hierarchy, floral-vine-trellis growth, courtly density, and Lucknow refinement. Replace realism-first staging with zardozi-born embroidery-world order. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through zardozi grammar, not realism.

Allow the result to gain complete material embodiment, stronger spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with zardozi added later. The whole world must remain zardozi-born.

Do not stylize only one garment border, one cuff, one bag, one object surface, or one metallic patch while leaving the rest of the world generic. Do not make it a realism scene with an embroidery insert. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable full world generated by zardozi itself.**
