

Moradabad metal - Uttar Pradesh

if translated beyond textile

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Moradabad Metal from Uttar Pradesh**, treating it as a **Moradabad-rooted art-metal and brassware system** built through **cast metal-body formation, lathe-refined contours, chased and repoussé surface work, engraved detail, appliqué enrichment, polished brass-led finish, and optional enamel or lac accents**.

Build the image as if it genuinely belongs inside the native Moradabad metalcraft tradition itself. The image must be governed first by **real cast metal-body authority, worked-surface metal intelligence, shaped and refined object form, brass-first material identity, and nature-and-Mughal-inspired ornament**, not by generic brass décor, plain industrial casting, machine-finished export styling, printed metallic patterning, or shiny luxury-object rendering.

The body must feel like real brass or worked metal, weight-bearing and materially believable. The form must feel mold-born and then refined, not thin, hollow, or generically modeled. The surface must feel actually worked through **chasing, repoussé, engraving, or appliqué**, not merely decorated. Polishing must feel metal-real and presentation-ready, not plastic-glossy or CGI-metallic.

The motif world must remain **Moradabad-born**: ornament inspired by **nature and Mughal art**, adapted to metal surfaces and useful object forms. The object should preserve Moradabad's hybrid of artistry and utility rather than becoming only sculpture or only hardware.

Color must come from **metal body first**, especially brass-tone authority, with **lac or enamel only as accent-level enrichment**. The final result must feel like **the real Moradabad metalcraft system itself made the whole image**.

Reusable Variable Template

Create [SUBJECT / METAL OBJECT / BRASSWARE SURFACE / MORADABAD METAL WORLD] in the **pure authentic source-truth visual logic of Moradabad Metal from Uttar Pradesh**.

Style system that must remain unchanged:

- real cast metal-body identity
- mold-born object formation
- lathe-shaped contour refinement
- chased / repoussé / engraved / appliqué surface intelligence
- brass-tone material authority
- nature-and-Mughal-inspired ornament
- polished finish refinement
- whole-frame Moradabad consistency

Translate the image like this:

- **[MAIN METAL BODY / MAIN OBJECT FORM / MAIN SURFACE MASS]** becomes a Moradabad-built metal presence governed by cast-and-worked object logic
- **[CHASED DETAIL / REPOUSSÉ LIFT / ENGRAVED ORNAMENT / APPLIQUÉ ELEMENTS]** must feel metal-born, tool-worked, and structurally integrated
- **[RIMS / NECKS / HANDLES / BASES / LIDS / BOWLS / PANELS / STEMS]** must feel contour-refined and object-aware
- **[ORNAMENT / NATURE-LINKED MOTIFS / MUGHAL-INSPIRED DETAILS]** must feel metal-suitable and surface-worked, not printed or painted
- **[BRASS TONE / METAL FINISH / POLISH / PATINA / ACCENT COLOR]** must remain metal-first, with enamel or lac used only secondarily
- **[IF FIGURES / OBJECTS / ARCHITECTURE APPEAR]** faces, bodies, posture, object logic, and environment logic must all be reorganized through Moradabad worked-metal intelligence, not realism

Keep:

- cast-body authority
- shaped contour discipline
- chased / repoussé / engraved / appliqué intelligence
- brass-led material identity
- polish-sensitive finish
- nature-and-Mughal ornament
- artistry-plus-utility logic
- whole-frame consistency

Avoid:

- generic brass décor
- machine-made giftware
- printed metallic ornament
- plain industrial casting
- export-catalog styling
- fake metallic gloss
- enamel dominating the object
- realism with Moradabad detailing added later

The final result must feel like a true Moradabad art-metal system, not a shiny object wearing decorative brass cues.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Moradabad Metal from Uttar Pradesh**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through Moradabad metalcraft grammar. Replace generic metallic styling with real cast-body formation. Replace plain surfaces with chased, repoussé, engraved, or appliqué-worked metal intelligence. Replace generic ornament with nature-linked and Mughal-inspired Moradabad surface order. Replace synthetic shine with real polished brass-led finish.

If the image includes object forms, make them feel mold-born and contour-refined. If the image includes decorative zones, make them feel tool-worked into metal rather than printed on it. If the image includes figures, objects, or environment, they must also be reorganized through Moradabad metalcraft intelligence rather than remain generic underneath one brass patch.

Do not simply make the source image gold or brass-colored. Do not keep industrial or export-giftware logic underneath. Do not let the image behave like shiny generic décor. The final result must feel as if the original image has been fully reauthored inside the true source-truth Moradabad Metal system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic dimensional translation of Moradabad Metal from Uttar Pradesh**, preserving the same deep source grammar as the authentic source-truth version, but translating it into a **richer, more dimensional, more image-complete worked-metal world while staying fully metal-born and process-born**.

Keep the core Moradabad Metal grammar fully unchanged: real cast metal-body identity, mold-born form logic, lathe-refined contour shaping, chased / repoussé / engraved / appliqué surface intelligence, brass-tone authority, optional accent-level enamel or lac, and nature-and-Mughal-inspired ornament. Do not turn this into decorative brass concept art, export-catalog glamour, generic luxury metal rendering, or shiny object beautification.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal bell, lamp, bowl, planter, or handle documentation, but it must also not become full generic realism-world depth. It should become a **creative hybrid art-metal world** where Moradabad's own cast-and-worked intelligence generates richer form, stronger contour hierarchy, and more dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and relations must all be rebuilt through Moradabad metalcraft logic. If objects appear, they must be shaped through cast-body order, lathe contour refinement, and worked-surface metal intelligence. If environment appears, it must grow from metal-born object logic and ornamental refinement rather than remain generic. The Moradabad system must become the larger organizing intelligence, not just a decorative overlay.

Dimensionality must come from Moradabad Metal itself: from cast mass, shaped contour, chased and repoussé articulation, engraved detail, appliqué additions, polish behavior, and object-to-surface coherence. Do not solve dimensionality through generic metallic shine, luxury rendering, or realism with one brass object added later.

Do not create:

decorative metal concept art, export-catalog glamour, generic polished brass rendering, or a generic dimensional image decorated later by Moradabad-like detailing.

The final result must feel like **the same Moradabad Metal grammar has entered a richer, more dimensional worked-metal world without losing process-born identity.**

Reusable Variable Template

Create **[SUBJECT / IMAGE / WORKED-METAL WORLD / MORADABAD METAL SYSTEM]** in the **authentic dimensional translation of Moradabad Metal from Uttar Pradesh.**

Keep unchanged:

- real cast metal-body identity
- mold-born object formation
- lathe-shaped contour refinement
- chased / repoussé / engraved / appliqué surface intelligence
- brass-tone authority
- optional accent-level enamel or lac
- nature-and-Mughal-inspired ornament
- whole-frame style consistency

Translate it into a richer dimensional worked-metal world like this:

- **[MAIN METAL BODY / MAIN OBJECT FORM / MAIN SURFACE MASS]** becomes a Moradabad-built presence with more dimensional life, but still governed by cast-and-worked metal order
- **[SECONDARY FIELDS / RIMS / HANDLES / NECKS / BASES / PANELS / SURFACE ZONES]** also transform through the same Moradabad grammar rather than generic styling
- **[CHASED DETAIL / REPOUSSÉ LIFT / ENGRAVED ARTICULATION / APPLIQUÉ ENRICHMENT / POLISH RESPONSE]** become more spatially alive and structurally expressive while remaining metal-born
- **[NATURE-LINKED MOTIFS / MUGHAL-INSPIRED ORNAMENT / DECORATIVE SURFACE SYSTEMS]** must remain Moradabad-native and metal-suitable
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, object logic, and environment logic must all be rebuilt through Moradabad metal order
- **[IF ENVIRONMENT APPEARS]** it must grow from cast-body logic, worked-surface intelligence, and object-scale art-metal structure rather than generic realism

Increase:

- dimensional presence
- contour hierarchy clarity
- surface articulation
- visual richness
- structural precision
- whole-frame transformation
- worked-metal world depth

Do not use:

- generic brassware styling
- export-catalog glamour
- plain industrial casting
- printed metallic ornament
- generic environment with Moradabad overlay
- only one worked-metal patch carrying the style
- fake metallic gloss overpowering structure

Success condition:

the result feels like the same Moradabad Metal grammar has been translated into a richer dimensional worked-metal world.

Failure condition:

the result feels like a generic decorative image decorated later by Moradabad Metal.

Image-to-Image

Convert this source image into the **authentic dimensional translation of Moradabad Metal from Uttar Pradesh**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through Moradabad Metal's internal grammar translated into a richer, more dimensional worked-metal world.

Replace generic metallic styling with cast-body logic. Replace plain surfaces with chased, repoussé, engraved, and appliqué-worked metal intelligence. Replace generic ornament with Moradabad's nature-plus-Mughal surface order. Replace synthetic shine with polish-sensitive brass-led finish. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through Moradabad metalcraft logic, not realism. If objects or environment are present, they must also be rebuilt through cast-and-worked metal intelligence instead of remaining generic.

Let the image gain more dimensional life, stronger surface hierarchy, richer metal articulation, and better whole-frame coherence. But do not turn it into brass concept art, export-giftware glamour, or generic luxury décor with Moradabad detailing added afterward.

Do not style only one lamp body, one bowl rim, one planter surface, or one handle zone. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through an authentic dimensional translation of Moradabad Metal**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **world-depth translation of Moradabad Metal from Uttar Pradesh**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable full world**.

Keep the same deep Moradabad Metal visual intelligence fully unchanged: real cast metal-body identity, mold-born form logic, lathe-shaped contour refinement, chased / repoussé / engraved / appliqué surface intelligence, brass-tone authority, optional enamel or lac accents, and nature-and-Mughal-inspired ornament. Do not turn this into generic realism, luxury-brass realism, interior décor realism, or a normal world with one Moradabad lamp, bowl, planter, handle, or figurine added on top.

Now convert that same grammar into a believable full world. The result must have believable material behavior, believable spatial separation, believable object presence, believable environmental completion, and believable three-dimensional world logic. But every visible part of the image must still be generated by Moradabad Metal grammar.

If figures are present, they must be rebuilt through Moradabad-born cast-and-worked metal structure, not normal realism near brass objects. If objects appear, they must be shaped through cast-body order, shaped contour refinement, worked-surface articulation, and brass-tone authority. If environment appears, it must be generated by chased / repoussé / engraved / appliqué logic, object-scale metal intelligence, and nature-plus-Mughal ornamental order. The world must not become ordinary reality with one brass insert into it.

Depth must now become full world-depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in one lamp, one planter, one bowl, one incense holder, one figurine, or one brass patch. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **Moradabad Metal itself has become a believable full world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED MORADABAD METAL WORLD]** in the **world-depth translation of Moradabad Metal from Uttar Pradesh.**

Keep unchanged:

- real cast metal-body identity
- mold-born object formation
- lathe-shaped contour refinement
- chased / repoussé / engraved / appliqué surface intelligence
- brass-tone authority
- optional accent-level enamel or lac
- nature-and-Mughal-inspired ornament
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN METAL MASS / MAIN OBJECT BODY]** becomes a fully embodied Moradabad-built presence with believable worked-metal-world logic
- **[SECONDARY FORMS / SUPPORT FIELDS / RIMS / HANDLES / PANELS / SURFACE ZONES]** also remain under the same Moradabad-born logic
- **[CAST STRUCTURE / CONTOUR REFINEMENT / CHASED DETAIL / REPOUSSÉ LIFT / ENGRAVED ORNAMENT / APPLIQUÉ ENRICHMENT / POLISH RESPONSE]** become world-organizing elements still governed by metalcraft structure
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by Moradabad Metal intelligence rather than generic realism

- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, object logic, and environment logic must all remain Moradabad-born, not realism-first

Increase:

- full world embodiment
- spatial separation
- object presence
- environmental orchestration
- worked-metal-to-world transformation
- contour readability
- whole-frame coherence

Do not lose:

- cast-body identity
- shaped contour refinement
- chased / repoussé / engraved / appliqué intelligence
- brass-tone authority
- nature-plus-Mughal ornament
- polish-sensitive finish
- Moradabad refinement
- whole-frame Moradabad identity

Do not use:

- realistic world with one brass object
- generic cinematic luxury-metal scene
- style-as-brass patch only
- style-as-floral ornament only
- style-as-shine only
- style-as-surface decoration only
- premium finish overpowering metalcraft structure
- reality with Moradabad flavor added later

Success condition:

the result feels like Moradabad Metal itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with Moradabad Metal.

Image-to-Image

Convert this source image into the **world-depth translation of Moradabad Metal from Uttar Pradesh**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through Moradabad Metal's source grammar translated into **full world-depth**.

Replace generic forms with Moradabad-built worked-metal-world presences. Replace ordinary surfaces with cast-body structure, shaped contour refinement, and chased / repoussé / engraved / appliqué intelligence. Replace generic decorative order with nature-plus-Mughal metal ornament, brass-tone authority, and polish-sensitive finish behavior. Replace realism-first staging with Moradabad-born art-metal-world order. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through Moradabad Metal grammar, not realism.

Allow the result to gain complete material embodiment, stronger spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with Moradabad Metal added later. The whole world must remain Moradabad-born.

Do not stylize only one lamp surface, one bowl rim, one planter body, one handle zone, one figurine, or one brass patch while leaving the rest of the world generic. Do not make it a realism scene with a metal insert. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable full world generated by Moradabad Metal itself**.
