

shell craft - Andaman & Nicobar

V1 — Authentic Style

Universal Hard Prompt

Create a fully self-contained handcrafted object image in the authentic visual grammar of Shell craft from Andaman & Nicobar.

Build the object from real seashell material as the primary form-body. The result must feel shell-born, not shell-themed. Use actual shell logic: natural shell curvature, shell edge rhythm, hard smooth shell surface, pale shell tonal range from ivory to cream to warm off-white, subtle pearly reflectivity, small-object decorative-functional craft intelligence, and neat handmade finishing.

The object should read like a genuine island shell handicraft article made from locally sourced shell material. Keep it compact, object-first, handcrafted, and materially specific. Let shell selection, shell arrangement, shell clustering, and shell-built ornament generate the final form. If support or joining is needed, keep it secondary and subordinate to shell identity.

The result must feel like real Andaman & Nicobar shell craft at source level: decorative-functional, souvenir-scale or tabletop-scale, neat, tactile, coastal only through real shell material, and rooted in local handmade product culture.

Do not make it generic beach décor, tropical resort styling, luxury coastal homeware, coral fantasy, plastic-looking shell imitation, resin décor, coconut-shell craft, or a normal object with shells pasted on later. The shell must be the actual generator of the object.

Reusable Variable Template

Create [OBJECT / OBJECT-GROUP / DECORATIVE-FUNCTIONAL ARTICLE] in the authentic visual grammar of Shell craft from Andaman & Nicobar.

Build the full result from real seashell logic:

- shell material as primary body
- shell-derived silhouette
- shell edge rhythm
- hard smooth shell surface
- pale shell tones, ivory, cream, off-white, subtle pearly variation
- compact handcrafted object scale
- arranged or assembled shell intelligence
- neat island handmade finish

Show [MAIN OBJECT PURPOSE / USE / ARRANGEMENT]. Let the object feel genuinely made from shells, not simply decorated by shells. Use shell clustering, shell placement, shell borders, shell layering, or shell-built ornament where needed, but keep object clarity stronger than decoration.

Keep it source-faithful, material-first, and object-first. It should feel like a real shell handicraft object from the islands' local craft ecosystem.

Do not turn it into beach-resort décor, generic souvenir styling, coconut-shell object logic, coral fantasy, plastic imitation shell, luxury product render, or a normal object with shell texture added later.

Image-to-Image

Use the input image only for object identity, broad silhouette intention, composition, and function. Rebuild the entire result in the authentic visual grammar of Shell craft from Andaman & Nicobar.

Transform the full object so it feels physically generated from real seashell material: shell body or shell-unit construction, shell curvature, shell edges, smooth hard shell surface, pale shell tonal range, subtle pearly reflectivity, and handcrafted decorative-functional shell-object logic.

Preserve the broad object purpose, but replace the entire material and form system with true shell-craft behavior. The result must read like a real handmade shell object from the islands, not a generic decorative product.

Do not apply shell texture only. Do not keep wood, resin, ceramic, plastic, or generic product logic underneath. Do not make it tropical décor or coastal styling. The object must become shell-born in structure, not shell-decorated on the surface.

V2 — Artisan Translation

Universal Hard Prompt

Create a fully self-contained handcrafted object image in the visual grammar of Shell craft from Andaman & Nicobar, translated into richer artisan object-depth while staying completely faithful to the source system.

Do not treat this as generic 3D uplift. Keep the same shell craft grammar intact and deepen it through richer handcrafted objecthood: stronger shell assembly readability, clearer shell clustering, more tactile shell layering, better edge definition, more believable shell-built ornament, and stronger decorative-functional object presence.

The object must still be ruled by real shell logic: actual shell identity, shell curvature, shell edge behavior, smooth hard shell surface, pale shell tonal range, subtle pearly reflectivity, and compact handcrafted scale. Let the result feel like skilled island artisans expanded the same shell craft into a richer object world, not like a designer product.

Increase tactile depth, object clarity, shell-part relationships, and handcrafted dimensional presence, but only through shell-born structure. Keep the object stronger than the styling around it.

Do not turn it into glossy coastal luxury décor, showroom homeware, generic upscale shell styling, resin imitation, plastic shell design, or beach-shop prettiness. The added depth must still feel source-rooted and artisan-made.

Reusable Variable Template

Create [OBJECT / OBJECT-GROUP / DECORATIVE-FUNCTIONAL SHELL FORM] in Shell craft grammar from Andaman & Nicobar, translated into richer handcrafted object-depth.

Build the full result through the same shell-born rules:

- real seashell identity,
- shell-generated silhouette,
- shell edge rhythm,
- smooth hard shell surface,
- pale shell tonal family,
- subtle pearly light response,
- shell clustering and assembly logic,
- compact handcrafted object scale.

Show [MAIN OBJECT PURPOSE / ARRANGEMENT / USE], but deepen it through stronger shell-part relationships, richer tactile layering, clearer handmade construction, and more believable decorative-functional objecthood.

This should feel like artisans expanded the source shell craft into a richer handcrafted dimensional object, not like a premium lifestyle product. The shell must still govern the whole result.

Do not make it a luxury coastal object, glossy décor render, plastic shell imitation, generic product visualization, or a normal object with shell accents added later.

Image-to-Image

Use the input image only for object identity, arrangement, scale intention, and broad composition. Rebuild the full result in Shell craft grammar from Andaman & Nicobar with richer handcrafted object-depth.

Transform every important visible part into shell-born craft logic: real shell material presence, shell-unit arrangement, shell edge readability, smooth hard shell finish, pale shell tonal range, subtle pearly reflectivity, layered shell ornament, and stronger handcrafted objecthood.

Increase tactile shell depth, assembly clarity, shell clustering, and dimensional object presence, but keep the same source shell grammar unchanged. The final result must feel like a more developed island shell-craft object, not a coastal décor product.

Do not apply shell texture only. Do not keep generic décor object logic underneath. Do not make it showroom shell luxury, beach-shop prettiness, or realism-first product styling.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a fully self-contained complete shell-world in the visual grammar of Shell craft from Andaman & Nicobar, translated into a fully resolved believable dimensional world where every important visible form belongs to the same shell-born system.

This is not a cinematic makeover and not generic realism with shell decoration. Keep the same shell craft DNA unchanged: real shell identity, shell-generated form, shell edge rhythm, shell clustering, shell assembly logic, smooth hard shell surface, pale shell tonal range, subtle pearly reflectivity, and decorative-functional shell-object intelligence.

Build a fully resolved shell-object ecology or shell-crafted world with stronger near-to-far consistency, fuller object presence, richer shell-light interaction, clearer spatial staging, stronger world completion, and total shell-system coherence. If the image expands beyond a single object, the environment must still remain object-governed and shell-intelligent, not realism-first.

The result must feel like shell craft itself has become a believable complete world while staying source-authentic. Every important visible element must still feel generated from shell material, shell arrangement, and shell-crafted object logic.

Do not create generic beach décor realism, tropical resort interiors, luxury coastal styling, glossy tourist-shop atmosphere, coral fantasy, or a normal realistic world with shell objects inserted into it.

Reusable Variable Template

Create [OBJECT / OBJECT WORLD / DECORATIVE-FUNCTIONAL SHELL ECOSYSTEM / EXPANDED SHELL SCENE] as a fully resolved believable dimensional world in Shell craft grammar from Andaman & Nicobar.

The full result must remain governed by one shell-born system:

real seashell identity,
shell-generated silhouette,
shell edge behavior,
shell clustering and assembly,
smooth hard shell surface,
pale ivory-cream-off-white tonal family,
subtle pearly light response,
decorative-functional object intelligence,
and local island shell-craft grounding.

Show [MAIN OBJECT PURPOSE / WORLD CONDITION / ARRANGEMENT / SCENE], but make all important visible forms belong to the same shell-derived grammar. Increase full-world completion, shell-light interaction, material believability, object presence, and near-to-far coherence compared to V2, while keeping the same source style-core unchanged.

Do not make it beach-resort realism, luxury coastal décor, plastic shell styling, glossy souvenir-shop rendering, or normal realism with shell props added later.

Image-to-Image

Use the input image only for object identity, arrangement, broad world structure, and scene readability. Rebuild the entire result as a fully resolved believable dimensional world in Shell craft grammar from Andaman & Nicobar.

Transform every important visible form into one continuous shell-born system: real shell identity, shell-generated form, shell edges, shell clustering, shell-built ornament, smooth hard shell surface, pale shell tonal range, subtle pearly reflectivity, and decorative-functional object logic. Preserve the broad scene meaning, but replace the entire image-making system with shell-craft intelligence.

The final result must feel like shell craft itself has become fully real and fully complete, without becoming a different style. Keep the world object-governed, shell-governed, and material-first.

Do not stylize only one object. Do not keep generic realism underneath. Do not build a normal coastal scene and decorate it with shells afterward. Do not create plastic shell luxury styling, beach-shop atmosphere, or tropical lifestyle imagery.
