

Bandhani - Gujarat

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of Bandhani from Gujarat, specifically as a hand-tied resist-dye textile tradition built through thousands of tightly tied points on cloth before dyeing.

Do not treat this as generic tie-dye, printed dotted fabric, painted cloth, psychedelic dye burst, or decorative fashion pattern.

Build the entire image as if it is generated from real Bandhani cloth intelligence:

hand-tied resist points,
tiny tied nodes,
clustered dot-field pattern construction,
dye entering the cloth around resisted points,
bright ceremonial textile color,
garment-based surface order,
fabric drape and fold behavior,
fine hand-built irregularity,
cloth transformed through tying and dyeing rather than surface decoration added later.

The visible pattern must feel like it comes from many tiny tied resist points, not from printed circles or airbrushed dots.

The cloth must feel dyed through process, not coated on top.

The field must feel organized through dot clusters, tied-point grouping, and garment logic rather than broad random dye spread.

If figures, objects, animals, architecture, landscape, or environment are present, rebuild all of them through Bandhani resist-dot intelligence so the whole frame feels born from tied cloth logic, not like a normal scene with a Bandhani dupatta or sari inserted later.

Use a bright Gujarat ceremonial cloth palette where appropriate:

red, yellow, blue, green, black, and related resist-dyed color relationships,
but keep the color process-built and textile-authentic rather than synthetic or digitally flat.

Every important element must belong to one Bandhani system:

tied-point logic,
dot-cluster order,
dye-built cloth memory,
garment-field structure,
and ceremonial textile presence.

Avoid:

generic tie-dye,
printed polka dots,
painted spots,
watercolor dye bloom,
fashion print styling,
one correct Bandhani patch inside an unrelated visual world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in the authentic visual logic of Bandhani from Gujarat.

Treat the style as a hand-tied resist-dye textile system built from tied points and clustered dot fields, not as generic tie-dye or printed dotted cloth.

Core style lock:

tied-point resist logic,
tiny tied nodes and clustered dots,
dye-sequenced cloth transformation,
bright ceremonial garment color,
fabric-first surface behavior,
garment and drape intelligence,
handmade irregularity,
whole-frame Bandhani consistency.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a Bandhani-built resist-dyed cloth presence with tied-point pattern order.

[SECONDARY FIGURES / OBJECTS / FORMS] also obey the same dot-field and tied-cloth grammar.

[EDGES / DIVISIONS / ZONES] become garment-aware dyed textile structures rather than printed borders.

[ENVIRONMENT] becomes organized through Bandhani cloth intelligence, tied-point rhythm, and resist-dyed field behavior.

Keep:

hand-tied process memory,
dot-cluster construction,
dye-built fabric behavior,
garment-centered order,
ceremonial textile richness,
Gujarat Bandhani identity.

Avoid:

generic tie-dye,
printed-dot fabric,

painted cloth look,
fashion-surface decoration,
broad random dye spread,
normal realism with Bandhani added afterward.

Image-to-Image

Convert this source image into the authentic visual world of Bandhani from Gujarat.

Preserve the source image's main subject relationships, action, and readability, but rebuild the entire image through Bandhani hand-tied resist-dye grammar.

Replace ordinary surfaces with dyed-cloth behavior.

Replace broad patterning with tied-point resist logic.

Replace printed-looking dots with tiny tied-node cluster construction.

Replace generic decorative color with bright Gujarat ceremonial cloth color that feels absorbed into the fabric through resist-dye process.

If the source contains people, garments, props, objects, animals, or environment, convert all of them so they feel generated by Bandhani cloth intelligence instead of remaining normal realism.

Do not simply paste Bandhani dots onto the source.

Do not leave the environment generic.

Do not make it look like printed dotted fashion fabric or generic tie-dye.

The final image must feel like a real Bandhani resist-dyed system expanded across the whole frame.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image translation rooted in Bandhani from Gujarat.

This is not generic tie-dye and not a full realistic world yet.

It must remain source-rooted in Bandhani textile grammar:

hand-tied resist points,

clustered dot-field construction,

dye-built fabric transformation,

bright ceremonial garment color,

garment and drape intelligence,

and hand-built textile irregularity.

Let the image gain dimensional body, layered cloth-field depth, stronger separation between dot zones, richer fabric tactility, and more articulated relation between tied points and surrounding dyed cloth.

But keep the image resist-cloth-first.

It should still feel like Bandhani textile intelligence is constructing the image, not generic realism.

Allow figures, surfaces, objects, architecture, and environment to become more spatially alive, but they must still obey tied-point pattern logic and resist-dyed cloth order.

The depth should feel like dimensionalized resist-dot image-space, not like a fully realistic environment.

Avoid:

generic tie-dye bloom,
printed-dot styling,
fashion-editorial textile art,
painted decorative spots,
surface pattern pasted on top,
generic realism with Bandhani cloth added later,
oversized dots that stop feeling hand-tied.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a creative 2D + 3D translation rooted in Bandhani from Gujarat.

Preserve these source-core rules:

Bandhani remains hand-tied and resist-dyed,
tied nodes remain the primary pattern engine,
clustered dot fields remain structural,
dye-built cloth memory remains active,
garment and drape logic remain visible,
the whole frame remains inside one Bandhani system.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a dimensionalized Bandhani resist-cloth image zone.

[SECONDARY FORMS] also obey the same tied-point and dot-cluster structure.

[DIVISIONS / ZONES / EDGES] gain richer layering but remain garment-aware and cloth-built.

[ENVIRONMENT] becomes a resist-dyed image-field rather than generic realism.

Let these become richer:

dot-field layering,
cloth-surface depth,

fabric tactility,
image-body,
relation between tied nodes and dyed field,
drape and fold articulation.

Keep unchanged:
hand-tied logic,
resist-process identity,
clustered dot behavior,
garment-centered cloth order,
Bandhani ceremonial richness.

Avoid:
generic tie-dye,
printed dots,
painted fabric drift,
fashion-print styling,
full realism,
one Bandhani section inside an unrelated image.

Image-to-Image

Convert this source image into a creative 2D + 3D Bandhani translation from Gujarat.

Preserve the source image's main action, subject count, and readability, but reconstruct the full image through Bandhani resist-cloth grammar.

Replace ordinary surfaces with hand-tied dye-built fabric behavior.
Replace broad decoration with tied-point cluster logic.
Replace generic dot patterning with Bandhani-style node fields and resist-dyed cloth order.

Allow the image to gain layered cloth depth, stronger separation of dot zones, richer textile tactility, and more visible image-body.

But do not let it become full realism.

It must still behave like a dimensionalized Bandhani resist-dyed field.

Do not paste dots onto a normal image.

Do not turn it into printed festive fabric styling.

Do not let decorative color overpower tied-node structure.

The result must feel like Bandhani cloth logic has gained image-body, not that a scene has been decorated afterward.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D realistic dimensional world generated from Bandhani of Gujarat.

The realism must remain fully governed by Bandhani textile grammar, not by generic realism.

Build the whole world through:
hand-tied resist points,
tiny tied nodes,
clustered dot-field construction,
dye-built fabric transformation,
bright ceremonial garment color,
garment and drape intelligence,
cloth absorbency,
and handmade textile irregularity.

The world must feel as if Bandhani resist-dye intelligence has become a complete dimensional reality.

Figures, clothing, objects, architecture, surfaces, environment, and spatial divisions must all belong to one Bandhani system.

Pattern must still feel tied and resist-built, not printed.

Color must still feel dyed into cloth, not painted or digitally laid on top.

Dot clusters and tied-node fields must still structure the world.

Make the space fully volumetric and believable, but do not let realism erase the resist-dyed cloth origin.

This is not normal realism with Bandhani motifs.

This is Bandhani grammar becoming world structure.

Avoid:

generic festive textile realism,
printed-dot fabric realism,
tie-dye fashion styling,
surface pattern application,
normal scene logic dominating over resist-cloth logic,
one Bandhani garment inside an otherwise unrelated realistic world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a full 3D realistic dimensional world generated from Bandhani of Gujarat.

Style system that must remain unchanged:

Bandhani remains hand-tied and resist-dyed,

tied-point logic remains primary,
clustered dot fields remain structural,
dye-built cloth transformation remains active,
garment and drape intelligence remain visible,
whole-frame Bandhani consistency remains intact.

Translate the world like this:

[MAIN SUBJECT / MAIN FIELD] becomes a fully dimensional Bandhani-governed cloth presence.

[SECONDARY FORMS / FIGURES / OBJECTS] become volumetric but remain tied-point and resist-built.

[DIVISIONS / ZONES / EDGES] continue to structure the world like dyed garment architecture.

[ENVIRONMENT] becomes a believable spatial field organized by Bandhani cloth intelligence and dot-field rhythm.

Increase:

full spatial depth,
material presence,
resist-cloth tactility,
fabric transformation,
field continuity,
world completion.

Do not lose:

hand-tied logic,
resist-process identity,
clustered dot behavior,
garment-based cloth order,
ceremonial textile authority,
Bandhani world-logic.

Avoid:

generic realistic festive fabric,
printed-dot look,
fashion-surface realism,
painted cloth drift,
Bandhani as accessory instead of world structure.

Image-to-Image

Convert this source image into a full 3D realistic Bandhani world from Gujarat.

Preserve the source image's main composition, subject relationships, and readability, but rebuild the whole image through Bandhani resist-dye world grammar.

Replace normal realism with a world governed by hand-tied point logic, clustered dot-field construction, dye-built fabric transformation, garment-centered cloth order, and bright Gujarat ceremonial textile color.

If the source contains figures, garments, props, objects, architecture, or environment, convert all of them so they behave as if generated from Bandhani resist-cloth intelligence.

Keep pattern tied-point-built and structurally plausible.

Keep color cloth-absorbed and process-built.

Keep the whole frame organized by dyed garment field order rather than generic realistic arrangement.

Do not simply apply Bandhani dots over the image.

Do not leave the environment or secondary forms generic.

Do not turn it into printed dotted fabric realism or generic festive tie-dye.

The final result must feel like Bandhani itself generated the world.
