

Gharchola - Gujarat

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of Gharchola from Gujarat as a ceremonial bridal textile system.

Treat this as a grid-first sari built from silk and zari checks, later activated by Bandhani tie-dye inside the square fields. Do not treat it as generic red wedding cloth, plain Bandhani sari, plain zari-check silk, luxury bridal fashion fabric, or random festive textile.

Build the entire image as if it is generated from real Gharchola intelligence:

silk cloth body,
gold zari check-grid,
clear square-field division,
Bandhani resist dots and tie-dye activation inside the checks,
red or maroon or scarlet auspicious bridal color,
white and yellow dot accents where needed,
motif-bearing boxes,
ritual wedding cloth hierarchy,
bridal drape intelligence.

The square-grid must remain structurally dominant.

The cloth must feel woven first and tie-dyed second.

Each square should feel like a controlled ceremonial compartment, not a loose decorative patch.

Motifs such as peacocks, lotus or floral forms, elephants, human figures, phulwari, or shikari themes may appear, but they must remain box-governed inside the square-field order.

If humans, animals, trees, props, objects, architecture, ground, or environment are present, rebuild all of them through Gharchola logic so the whole frame feels born from zari-check organization, Bandhani-filled compartments, red-gold wedding hierarchy, and ritual textile order, not like a normal scene with one Gharchola sari inserted later.

Human skin and faces must remain clean and readable.

The style must enter through square-field segmentation, gold-grid order, dot activation inside the checks, motif-bearing boxes, and bridal ceremonial cloth structure across the whole image.

Avoid:

generic red Bandhani sari,
plain gold-check silk,
bridal couture fabric with no grid logic,
free-floating motifs,

one Gharchola patch inside an unrelated world,
surface-only wedding styling.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in the authentic visual logic of Gharchola from Gujarat.

Treat the style as a ceremonial silk-and-zari grid textile later activated by Bandhani tie-dye, not as generic wedding cloth.

Core style lock:

silk body,
gold zari check-grid,
clear square-field organization,
Bandhani dots and resist activation inside the squares,
red-led auspicious bridal palette,
motif-bearing boxes,
wedding-role symbolism,
whole-frame Gharchola consistency.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a Gharchola-built ceremonial textile presence with zari-grid and Bandhani-filled square compartments.

[HUMANS] are rebuilt through bridal cloth segmentation, square-field garment logic, gold-grid drape, and compartmental pattern order; skin stays clean and human.

[ANIMALS] are rebuilt through motif-bearing square logic and Bandhani-filled box structure rather than generic realism.

[TREES / FOLIAGE] are rebuilt through compartmentalized grid order, Bandhani activation, and box-governed ceremonial patterning rather than natural leaf realism.

[OBJECTS / GROUND / ARCHITECTURE] inherit square-field segmentation, gold-zari structural order, and Bandhani-filled compartments.

[ENVIRONMENT] becomes a Gharchola wedding world rather than generic realism.

Keep:

grid-first identity,
woven-first and tie-dyed-second process memory,
box-governed motifs,
red-gold bridal hierarchy,
Gujarati wedding symbolism.

Avoid:

generic red wedding fabric,
plain Bandhani look,
plain zari-check silk,
floating motifs,

free decorative luxury styling,
one correct Gharchola element inside an unrelated image.

Image-to-Image

Convert this source image into the authentic visual world of Gharchola from Gujarat.

Preserve the source image's main subject relationships, action, and readability, but rebuild the entire image through Gharchola ceremonial textile grammar.

Replace ordinary surfaces with silk-and-zari check-grid behavior.

Replace generic decoration with square-field organization.

Replace plain festive cloth with Bandhani activation inside the checks.

Replace open motif placement with compartmentalized motif-bearing boxes.

Replace generic bridal color with a red or maroon or scarlet Gharchola wedding hierarchy with gold grid and controlled white or yellow dotted activation.

If the source contains people, animals, trees, props, objects, architecture, ground, or environment, convert all of them so they feel generated by Gharchola wedding-cloth intelligence instead of remaining normal realism.

Do not simply add a red sari with checks.

Do not leave the environment generic.

Do not let motifs float outside the square system.

The final image must feel like a real Gharchola textile world expanded across the whole frame.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image translation rooted in Gharchola from Gujarat.

This is not generic bridal red luxury fabric and not a full realistic world yet.

It must remain source-rooted in Gharchola grammar:

silk body,

gold zari check-grid,

square-field organization,

Bandhani tie-dye activation inside the checks,

motif-bearing compartments,

red-led auspicious wedding color,

ritual bridal cloth hierarchy.

Let the image gain dimensional body, layered square-field depth, richer silk tactility, clearer zari-grid structure, more articulated Bandhani life inside each box, and stronger relation between the compartments and the larger ceremonial field.

But keep the image Gharchola-first.

It should still feel like Gharchola textile intelligence is constructing the image, not generic realism.

Extend Gharchola across all elements:

humans are shaped through compartmental garment logic, gold-grid drape, box-governed patterning, and red-gold wedding hierarchy;

animals are shaped through motif-bearing square logic and ceremonial compartmental structure;

trees are shaped through segmented grid masses and Bandhani-filled field order;

props, ground, and architecture are shaped through square-field zoning, gold structural lines, and controlled box activation.

Faces and skin stay readable and human.

No free-floating motifs.

No plain Bandhani substitution.

No generic bridal couture styling.

Avoid:

generic red wedding cloth,

plain gold-check silk,

Bandhani-only solution,

open motif scatter,

surface-only wedding decoration,

normal realism with one Gharchola sari inserted.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a creative 2D + 3D translation rooted in Gharchola from Gujarat.

Preserve these source-core rules:

zari-grid remains primary,

Bandhani activation remains inside the checks,

square-field logic remains structural,

motifs remain compartmentalized,

red-gold bridal hierarchy remains active,

the whole frame remains inside one Gharchola system.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a dimensionalized Gharchola image-zone built from gold-grid compartments and Bandhani-filled boxes.

[HUMANS] are rebuilt through square-field garment order, gold-structured drape, and compartmental pattern logic; skin remains clean.
[ANIMALS] are rebuilt through motif-box logic and compartmentalized ceremonial form.
[TREES / FOLIAGE] are rebuilt through segmented box-masses and grid-governed field structure.
[OBJECTS / GROUND / ARCHITECTURE] gain richer layering but remain governed by zari-check order and Bandhani-filled compartments.
[ENVIRONMENT] becomes a Gharchola wedding image-field rather than generic realism.

Let these become richer:
square-field layering,
silk tactility,
zari structure,
Bandhani life inside the boxes,
bridal cloth presence,
image-body.

Keep unchanged:
grid-first logic,
woven-plus-tie-dye process identity,
compartmental motifs,
red-led auspicious meaning,
Gharchola branch purity.

Avoid:
generic bridal textile styling,
plain Bandhani replacement,
plain zari-check replacement,
floating motifs,
one Gharchola section inside an unrelated image.

Image-to-Image

Convert this source image into a creative 2D + 3D Gharchola translation from Gujarat.

Preserve the source image's main action, subject count, and readability, but reconstruct the full image through Gharchola square-field wedding-cloth grammar.

Replace ordinary surfaces with silk-and-zari grid behavior.
Replace general decoration with compartmental box order.
Replace open patterning with Bandhani activation inside the squares.
Replace generic wedding richness with a red-gold ritual hierarchy governed by Gharchola checks.

Allow the image to gain layered square-field depth, richer textile tactility, clearer zari structure, and more visible image-body.

But do not let it become full realism.
It must still behave like a dimensionalized Gharchola ceremonial field.

Do not let the style collapse into Bandhani-only.
Do not let motifs float outside the grid.
Do not leave humans, trees, animals, or environment generic.

The result must feel like Gharchola textile logic has gained image-body across the whole frame.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D realistic dimensional world generated from Gharchola of Gujarat.

The realism must remain fully governed by Gharchola textile grammar, not by generic bridal realism.

Build the whole world through:
silk-and-zari woven checks,
square-field organization,
Bandhani activation inside the compartments,
motif-bearing boxes,
red or maroon or scarlet auspicious bridal color,
gold ceremonial structure,
Gujarati wedding-cloth symbolism.

The world must feel as if Gharchola textile intelligence has become a complete dimensional reality.

Figures, clothing, objects, architecture, surfaces, environment, and spatial divisions must all belong to one Gharchola system.

The gold grid must still feel structurally primary.

The Bandhani must still live inside the checks.

The motifs must still be compartmentalized rather than floating freely.

Humans must be rebuilt through square-field garment logic, gold-grid drape, compartmental pattern order, and bridal symbolic structure while skin remains clean and human.

Animals must be rebuilt through motif-box and Bandhani-filled compartment logic.

Trees must be rebuilt through segmented ceremonial grid masses rather than natural realism.

Ground, props, and architecture must all inherit Gharchola square-field intelligence.

Make the space fully volumetric and believable, but do not let realism erase the grid-plus-bandhani origin.

This is not normal realism with one wedding sari.

This is Gharchola grammar becoming world structure.

Avoid:

generic premium wedding environment,
plain Bandhani bridal realism,
plain zari-check luxury realism,
floating motifs,
surface-only wedding decoration,
one Gharchola garment inside a non-Gharchola world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a full 3D realistic dimensional world generated from Gharchola of Gujarat.

Style system that must remain unchanged:

zari-grid remains primary,
Bandhani remains inside the checks,
square-field logic remains structural,
motifs remain box-governed,
red-gold bridal hierarchy remains active,
whole-frame Gharchola consistency remains intact.

Translate the world like this:

[MAIN SUBJECT / MAIN FIELD] becomes a fully dimensional Gharchola-governed ceremonial presence.

[HUMANS] become volumetric but remain organized through square-field garment rhythm, gold-grid drape, and compartmentalized bridal cloth logic.

[ANIMALS] become volumetric but remain shaped by motif-bearing box logic.

[TREES / FOLIAGE] become volumetric but remain organized through segmented grid masses and Bandhani-filled compartments.

[OBJECTS / GROUND / ARCHITECTURE] continue to structure the world through Gharchola square-field order.

[ENVIRONMENT] becomes a believable spatial field organized by Gharchola wedding intelligence rather than generic realism.

Increase:

full spatial depth,
material presence,
silk tactility,
zari structure,
compartment continuity,
world completion.

Do not lose:

grid-first identity,
woven-plus-bandhani process memory,

box-governed motifs,
red-led auspicious bridal meaning,
Gharchola world-logic.

Avoid:

generic realistic wedding luxury,
plain Bandhani realism,
plain zari-check realism,
motifs as floating accessories,
Gharchola as costume instead of world structure.

Image-to-Image

Convert this source image into a full 3D realistic Gharchola world from Gujarat.

Preserve the source image's main composition, subject relationships, and readability, but rebuild the whole image through Gharchola wedding-textile world grammar.

Replace normal realism with a world governed by silk-and-zari check-grid structure, square-field organization, Bandhani activation inside the checks, motif-bearing compartments, and red-gold Gujarati bridal symbolism.

If the source contains figures, garments, props, objects, architecture, animals, trees, ground, or environment, convert all of them so they behave as if generated from Gharchola textile intelligence.

Keep the grid structurally primary.

Keep Bandhani inside the compartments.

Keep motifs compartmentalized and square-governed.

Keep the whole frame organized by Gharchola field order rather than generic realistic arrangement.

Do not simply apply a red-gold sari over the image.

Do not leave secondary forms generic.

Do not turn it into plain wedding couture realism.

The final result must feel like Gharchola itself generated the world.
