

Jhajjar Pottery - Haryana

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic source-faithful visual logic of **Jhajjar pottery from Haryana**, specifically a **terracotta vessel tradition centered on slim-necked water pitchers and other useful earthen containers**. Treat this as a **vessel-first, clay-body-first, utility-first pottery system**, not as generic terracotta décor, not as studio ceramics, not as glossy handmade pottery, and not as sculptural clay art.

Build the object-world as if it comes from a real **earthen water-storage pottery culture**. The main forms should feel like actual clay vessels made for holding, cooling, storing, and pouring water or other household materials. The strongest anchor should be the **surahi / slim-necked pitcher logic**: narrow neck, controlled mouth, swelling capacity-bearing body, stable base, and clearly usable vessel proportions. Even when other pottery objects appear, they must still feel part of the same Haryana terracotta system.

Material logic: the clay must feel **porous, fired, matte, earthy, and active**, not glossy or vitrified. The body should suggest real earthenware that cools water and carries the behavior of fired clay. The surface should feel like **unglazed terracotta or slip-softened earthenware**, with warm fired tones, subtle hand irregularity, and visible pottery-body truth. Do not make it ceramic-luxury smooth or studio-gallery refined.

Construction logic: the objects should feel **made**, not industrially produced. Preserve the sense of hand-thrown necks, hand-shaped or assembled body transitions, joined clay parts where relevant, and fired earthen resolution. The forms should feel believable as real pots made by potters, not concept-designed clay sculptures.

Surface logic: ornament, if present at all, must stay secondary to **vessel silhouette, clay body, and use-memory**. Do not let painted decoration or surface pattern dominate the object. The eye should read the pot as a vessel first, not as a decorated art object.

Color logic: keep the palette rooted in **terracotta red, fired earth brown, warm clay orange-brown, muted red-yellow slip behavior, smoke-softened earthen neutrals, and matte kiln-born variation**. Avoid luxury ceramic palettes, glossy product styling, or designer color treatments.

Whole-frame rule: if the image includes one pot or many pots, all important elements must belong to the same Jhajjar pottery world — lip, neck, shoulder, belly, base, spout, handle, grouping, surrounding domestic object context, and fired-clay material logic must all remain internally consistent.

Negative constraints: no glossy ceramic finish, no studio pottery styling, no showroom décor terracotta, no sculptural clay art with no vessel truth, no painted folk-pottery surface taking

over the object, no generic rustic prop pottery, no luxury handcrafted product photography language.

The final image must feel like true **Jhajjar Pottery / Haryana: usable terracotta vessels, especially slim-necked water pitchers, built from porous fired earthen clay, matte surface behavior, domestic utility memory, and hand-made pottery truth.**

Reusable Variable Template

Create **[SUBJECT / OBJECT GROUP / SCENE]** in the authentic source-faithful visual logic of **Jhajjar pottery from Haryana**, treating it as a **terracotta vessel system centered on useful water-storage and household pottery**.

Core style system to preserve:

- vessel-first identity
- slim-necked pitcher / surahi form memory
- porous fired earthen clay body
- matte terracotta / earthenware finish
- domestic utility and water-storage truth
- hand-made pottery construction memory
- surface restraint with body-form priority
- whole-object-world coherence

Translate the image like this:

[MAIN VESSEL OR MAIN OBJECT] becomes a real Haryana terracotta vessel with usable proportions, believable mouth/neck/body/base relation, and strong earthen container identity

[SECONDARY VESSELS OR SUPPORTING OBJECTS] become related pottery forms from the same fired-clay world

[SURFACE / FINISH] becomes matte, porous, warm-fired terracotta or slip-softened clay rather than glossy ceramic

[USE CONTEXT] must support the object's function as water-storage, storage, pouring, cooling, or daily household use

[GROUPING / ENVIRONMENT] must remain subordinate to the pottery system and not drift into another craft language

Keep:

- usable vessel truth
- surahi / pitcher memory
- porous fired-clay identity
- matte terracotta body
- domestic utility logic
- hand-process presence
- whole-object-world consistency

Avoid:

- generic terracotta décor

studio ceramics
glossy pottery
sculptural clay art
surface decoration dominating body-form
designer pottery styling
rustic prop pottery with no Jhajjar logic

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Jhajjar pottery from Haryana**.

Preserve the source image's main object count, overall arrangement, and core readability, but rebuild every important form through **terracotta vessel logic**, especially **slim-necked water-pitcher / surahi behavior, porous fired clay body, matte earthen surface, and domestic utility truth**. Replace any generic pottery, decorative clay objects, glossy ceramics, or sculptural vessel-art styling with a true **Haryana earthen vessel system**.

If the source image contains pots, make them behave like **actual useful earthen containers**. If it contains pitchers, rebuild them with believable narrow neck, controlled mouth, swelling body, and stable storage base. If it contains decorative surface detail, reduce it so that **vessel silhouette, clay body, and fired earthen material** remain primary. If it contains multiple clay objects, make them all belong to one unified Jhajjar pottery world.

Do not simply recolor the source image into terracotta tones. Do not keep another ceramic grammar underneath. Do not turn the image into generic rustic pottery styling. Rebuild the full object-world so it feels as if the source scene originally emerged from a true Jhajjar terracotta vessel tradition: **porous, matte, fired, useful, hand-made, and water-storage-centered**.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative **2D + 3D translation** rooted in the visual grammar of **Jhajjar pottery from Haryana**, but keep the style source-faithful at its core. This must not become generic terracotta styling, decorative pottery art, studio ceramics, or designer handcrafted vessel imagery. It should feel like authentic **Jhajjar vessel intelligence** expanding into a richer visual world while still remaining **vessel-first, clay-body-first, and utility-born**.

Keep the native pottery engine intact: **surahi / slim-necked pitcher memory, porous fired clay body, matte terracotta surface, useful domestic vessel form, and hand-made pottery construction logic**. Then allow a controlled expansion where the vessel world gains richer contour articulation, stronger relation between neck and body, deeper object-group composition, clearer clay-mass presence, and more expressive fired-earth materiality. The richness must come from **form, clay, and object-world coherence**, not from decorative excess.

Material logic: the pottery should still feel like fired earthenware that cools, stores, and serves household use. Let the terracotta become more visually alive through subtle variation in tone, thickness, construction transitions, and grouped vessel-world presence, but do not let the material become glossy, ceramic-luxury, or design-gallery refined.

Form logic: allow the surahi and related vessel families to become more visually articulate and compositionally powerful, but keep them **buildable and usable**. The narrow neck, swelling body, shoulder transitions, and base stability must still feel like they belong to practical water and storage vessels, not ornamental clay sculptures.

Whole-frame rule: if multiple vessels, supporting objects, or contextual domestic forms appear, they must all remain governed by the same pottery grammar. The entire image must feel generated from **Jhajjar terracotta vessel intelligence**, not that a decorative clay look was applied afterward.

Negative constraints: no studio pottery styling, no glossy ceramic language, no décor-first terracotta, no sculptural abstraction without utility truth, no painted folk surface taking over the vessel, no product-design luxury handmade look, no generic rustic pottery moodboard.

The final image must feel like **Jhajjar pottery from Haryana** translated into a richer 2D+3D object-world while still remaining **terracotta, porous, vessel-led, hand-made, and domestically grounded**.

Reusable Variable Template

Create **[SUBJECT / OBJECT GROUP / SCENE]** as a creative **2D + 3D translation** rooted in the visual grammar of **Jhajjar pottery from Haryana**.

Preserve these style-core rules:

- vessel identity remains primary
- surahi / pitcher form logic remains legible
- porous fired-clay identity remains stronger than surface styling
- matte terracotta body remains active
- domestic utility memory remains present
- hand-made construction memory remains visible
- whole-object-world branch purity remains intact

Translate the image like this:

[MAIN VESSEL OR MAIN OBJECT] becomes a richer Jhajjar terracotta form with stronger contour, clay-body presence, and usable vessel logic

[SECONDARY OBJECTS] become supporting pottery forms from the same earthen system

[SURFACE / FIRED FINISH] becomes more materially expressive while staying matte, porous, and terracotta-based

[GROUPING / RELATION BETWEEN OBJECTS] becomes more visually articulate without losing the domestic pottery-world truth

[SETTING / SUPPORT CONTEXT] stays subordinate to the vessel system and must not drift into another craft language

Let these become richer:

neck/body articulation

clay-mass presence

grouped vessel rhythm

fired-earth tonal nuance

object-world depth

material tactility

Keep unchanged:

vessel-first identity

surahi / water-pot memory

porous clay behavior

domestic utility truth

matte terracotta finish

hand-process presence

whole-object-world coherence

Avoid:

generic terracotta styling

studio ceramic design

glossy pottery

decorative folk-pot surface

sculptural abstraction replacing utility

luxury handmade product language

generic rustic pottery mood

Image-to-Image

Convert this source image into a creative **2D + 3D Jhajjar pottery translation** from Haryana.

Preserve the source image's main object count, general arrangement, and readable object relationships, but reconstruct the full image through **terracotta vessel logic**, especially **surahi / slim-necked pitcher memory, porous fired clay body, matte earthen finish, and**

hand-made domestic pottery truth. Let the object-world become richer and more visually expressive than a plain pottery study, but keep it fully governed by **Jhajjar vessel grammar**.

If the source image contains pots, rebuild them as **usable earthen vessels** with stronger clay-body presence and more articulate contour transitions. If it contains pitchers, give them clear Jhajjar-style surahi logic in the neck, mouth, shoulder, and body relationship. If it contains multiple objects, make them relate like members of one terracotta family rather than decorative prop clusters. If it contains decoration, subordinate it to the vessel body so the eye still reads function and material first.

Do not simply add terracotta texture or earthy color to normal objects. Do not keep another pottery language underneath. Do not let the image become a generic rustic clay-object composition. Rebuild the full object-world so it feels as if the source scene naturally evolved from a richer Jhajjar terracotta pottery system while preserving **use truth, clay porosity, and vessel-first identity**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable **full 3D realistic dimensional world** generated from the visual grammar of **Jhajjar pottery from Haryana**. This is not a realistic still life with terracotta props. It is a fully dimensional object-world in which **surahi form logic, porous fired clay, matte terracotta surface, domestic use-memory, and hand-made vessel construction** have become materially convincing reality.

Convert the entire style system into dimensional object form without losing its laws. The objects must still feel like **real useful earthen vessels**: pitchers, water containers, storage pots, and related domestic clay forms. The strongest anchor should remain the **Jhajjar surahi** — narrow neck, controlled opening, swelling capacity-bearing body, stable base, and fired clay body that still feels functionally porous and water-cooling capable.

Material logic: let the fired clay become fully tactile and believable — matte, warm, porous-looking, slightly varied in tone, subtly hand-irregular, and structurally real. The vessels must not become glossy ceramics, sealed decorative pots, or luxury pottery products. Realism must strengthen the **earthen container truth**, not replace it with product photography aesthetics.

Construction logic: show believable transitions between rim, neck, shoulder, belly, base, and attached parts where present. The objects should still feel made by potters, not machine-fabricated or digitally sculpted without process memory. Even in full dimensional realism, the pottery must preserve **hand-made vessel intelligence**.

Whole-frame rule: if the scene contains one vessel or many, every major element must still belong to one Jhajjar pottery world. The vessels, their arrangement, surrounding domestic

context, and material behavior must all remain unified under the same **terracotta vessel grammar**.

Negative constraints: no studio ceramic realism, no glossy pottery product styling, no décor terracotta still life, no sculptural ceramic art-object logic, no painted pottery language taking over the object, no luxury handmade tableware mood, no generic rustic clay-object realism.

The final image must feel like **Jhajjar pottery from Haryana fully resolved into believable dimensional reality: usable vessels, especially slim-necked water pitchers, built from porous fired terracotta, matte earthen body, domestic utility truth, and hand-made pottery structure.**

Reusable Variable Template

Create **[SUBJECT / OBJECT GROUP / SCENE]** as a believable **full 3D realistic dimensional world** generated from the visual grammar of **Jhajjar pottery from Haryana**.

Style system that must remain unchanged:

- vessel identity remains primary
- surahi / pitcher logic remains active
- porous fired-clay body remains visible
- matte terracotta surface remains dominant
- domestic water/storage use-memory remains present
- hand-made pottery construction remains legible
- whole-object-world branch purity remains intact

Translate the image like this:

[MAIN VESSEL OR MAIN OBJECT] becomes a fully dimensional Jhajjar terracotta form with real usable vessel proportions and strong clay-body truth

[SECONDARY OBJECTS] become supporting vessels from the same Haryana earthenware family

[SURFACE / FIRED BODY] becomes materially convincing while staying matte, porous-looking, and earthen

[GROUPING / DOMESTIC CONTEXT] becomes spatially believable but must still serve the vessel system rather than overpower it

[SURROUNDING OBJECT-WORLD] must remain branch-consistent and not drift into another ceramic or decor language

Increase:

- believable clay volume
- material tactility
- neck/body/base realism
- fired-earth tonal depth
- object-world presence
- domestic-use realism

Do not lose:

vessel-first truth
surahi memory
porous earthen identity
matte terracotta finish
hand-process presence
Jhajjar/Haryana grounding
whole-object-world consistency

Avoid:

glossy ceramic realism
studio pottery aesthetics
décor-first terracotta
sculptural vessel-art language
painted surface dominating form
luxury handcrafted pottery mood
generic rustic clay-prop realism

Image-to-Image

Convert this source image into a believable **full 3D realistic dimensional world** generated from **Jhajjar pottery from Haryana**.

Preserve the source image's main object count, general arrangement, and core readability, but rebuild every important form through **terracotta vessel logic**, especially **surahi / slim-necked water-pitcher memory, porous fired clay body, matte earthen finish, domestic utility truth, and hand-made pottery construction**. Replace any generic pottery, decorative clay props, studio ceramics, or glossy ceramic styling with a true **Jhajjar earthen vessel system**.

If the source image contains pitchers, rebuild them with believable Jhajjar surahi logic in the neck, mouth, shoulder, belly, and base. If it contains pots or containers, make them read as useful earthen storage vessels rather than decorative objects. If it contains multiple clay objects, make them all belong to the same terracotta family in silhouette, material behavior, and use-memory. If it contains surrounding domestic context, keep it subordinate to the pottery system and do not let the image drift into another craft language.

Do not simply add terracotta color or pottery texture to the source objects. Do not keep another vessel language underneath. Do not turn the image into generic rustic clay-object realism. Rebuild the whole scene so it feels as if the original world emerged from a fully dimensional **Jhajjar pottery system: terracotta, porous, matte, vessel-led, hand-made, and domestically real**.
