

Kutch embroidery - Gujarat

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of Kutch embroidery from Gujarat, but lock it to one specific branch only: [CHOSEN_BRANCH].

Do not create a mixed Kutchi embroidery look.

Do not merge Suf geometry, Paako solidity, Rabari mirrors, Garasia Jat counted filling, Mutava minuteness, and other branch traits into one decorative hybrid.

Treat this as a real branch-owned embroidered cloth system built by hand on fabric for garments, dowry textiles, or household textiles.

Build the entire image as if it is generated from the true embroidery grammar of [CHOSEN_BRANCH]:

branch-specific stitch behavior,

branch-specific density,

branch-specific field organization,

branch-correct mirror use or non-use,

branch-correct motif logic,

branch-correct outlining and fill behavior,

cloth-surface construction through stitches rather than print or painted pattern.

If [CHOSEN_BRANCH] is geometric and counted, make the image obey counted construction, directional stitch order, and structural field logic.

If [CHOSEN_BRANCH] is mirror-rich, make the mirrors branch-correct in scale, quantity, and placement, not random decorative mirror work.

If [CHOSEN_BRANCH] is minute and refined, keep the stitching dense, small-scale, and precise.

If [CHOSEN_BRANCH] is solid-filled, make the surface read as densely worked stitched cloth, not loosely ornamented fabric.

If humans, animals, trees, props, architecture, ground, or environment are present, rebuild all of them through the chosen branch's embroidery grammar so the whole frame feels born from that stitched surface logic, not like a normal realistic scene with one embroidered blouse or patch inserted later.

Human skin and faces must remain readable and human. Do not make skin look like thread lumps.

The style must enter through embroidered segmentation, stitched field order, cloth logic, branch-specific pattern distribution, and surface construction across the whole image.

Avoid:

mixed-branch Kutchi embroidery,

generic mirror-work,
print pretending to be embroidery,
one embroidered patch inside a generic world,
boho decorative craft styling,
surface-only embroidery.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in the authentic visual logic of Kutch embroidery from Gujarat, locked strictly to [CHOSEN_BRANCH].

Treat the style as a branch-owned hand-embroidery system on cloth, not as generic Kutchi decoration.

Core style lock:

[CHOSEN_BRANCH] stitch grammar,
[CHOSEN_BRANCH] density logic,
[CHOSEN_BRANCH] motif or geometry logic,
[CHOSEN_BRANCH] mirror rule if relevant,
cloth-surface construction through stitching,
community-owned branch identity,
whole-frame branch consistency.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a [CHOSEN_BRANCH]-built embroidered textile presence.

[HUMANS] are rebuilt through branch-specific stitched segmentation, garment-field logic, embroidered mass grouping, and cloth-surface order; skin stays clean and human.

[ANIMALS] are rebuilt through branch-specific embroidered pattern logic, stitched contour behavior, and cloth-field distribution.

[TREES / FOLIAGE] are rebuilt through branch-specific stitch grouping, field segmentation, and embroidered cluster logic rather than naturalistic leaves.

[OBJECTS / GROUND / ARCHITECTURE] inherit the same branch-owned embroidered structure, not generic folk decoration.

[ENVIRONMENT] becomes a [CHOSEN_BRANCH] embroidered world rather than generic realism.

Keep:

one branch only,
stitched surface construction,
cloth-use identity,
branch-correct density,
branch-correct mirror logic if relevant.

Avoid:

branch mixing,

generic bright thread ornament,
mirror everywhere,
printed pattern look,
one correct costume piece inside an unrelated image.

Image-to-Image

Convert this source image into the authentic visual world of Kutch embroidery from Gujarat, locked strictly to [CHOSEN_BRANCH].

Preserve the source image's main subject relationships, action, and readability, but rebuild the entire image through the branch-specific embroidery grammar of [CHOSEN_BRANCH].

Replace ordinary surfaces with embroidered cloth logic.

Replace generic decoration with branch-specific stitch construction.

Replace broad folk styling with the actual grammar of [CHOSEN_BRANCH]:

its density,

its fill method,

its mirror or non-mirror rule,

its geometry or motif bias,

its outlining and segmentation behavior.

If the source contains people, animals, trees, props, ground, architecture, or environment, convert all of them so they feel generated by [CHOSEN_BRANCH] embroidery intelligence instead of remaining normal realism.

Do not simply add embroidered borders or patches.

Do not leave the environment generic.

Do not merge different Kutch branches.

The final image must feel like one real Kutch embroidery branch expanded across the whole frame.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image translation rooted in Kutch embroidery from Gujarat, but locked strictly to one branch only: [CHOSEN_BRANCH].

This is not generic Kutchi decoration and not a full realistic world yet.

It must remain source-rooted in the branch grammar of [CHOSEN_BRANCH]:

branch-specific stitch behavior,

branch-specific density,
branch-specific geometry or motif logic,
branch-correct mirror rule if relevant,
cloth-surface segmentation,
embroidered field construction.

Let the image gain dimensional body, layered stitched-field depth, richer textile tactility, stronger distinction between filled and open zones, more articulated embroidered segmentation, and greater surface presence.
But keep the image embroidery-field-first.
It should still feel like [CHOSEN_BRANCH] is constructing the image, not generic realism.

Extend the chosen branch across all elements:
humans are shaped through embroidered garment-field logic, stitched mass grouping, and branch-specific pattern structure;
animals are shaped through branch-correct stitched segmentation and surface logic;
trees are shaped through embroidered field clustering and branch-specific fill behavior;
props, ground, and architecture are shaped through the same branch's stitched order.

Faces and skin stay readable and human.
No thread lumps on skin.
No fake printed embroidery.
No mixed branches.

Avoid:
branch mixing,
generic mirror-work,
printed embroidery simulation,
surface embellishment added afterward,
architecture-only solution,
normal realism with one embroidered garment inserted.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a creative 2D + 3D translation rooted in Kutch embroidery from Gujarat, locked to [CHOSEN_BRANCH].

Preserve these source-core rules:
one branch only,
branch-specific stitch grammar remains primary,
embroidered cloth logic remains structural,
branch-correct density remains active,
mirror use stays branch-correct if relevant,
the whole frame remains inside one [CHOSEN_BRANCH] system.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a dimensionalized [CHOSEN_BRANCH] embroidered image-zone.
[HUMANS] are rebuilt through branch-specific embroidered segmentation, garment-field order, and stitched surface grouping; skin remains clean.
[ANIMALS] are rebuilt through branch-correct stitched markings and cloth-surface logic.
[TREES / FOLIAGE] are rebuilt through embroidered clustering, field segmentation, and branch-specific fill rhythm.
[OBJECTS / GROUND / ARCHITECTURE] gain richer layering but remain governed by [CHOSEN_BRANCH] embroidery order.
[ENVIRONMENT] becomes a branch-embroidered image-field rather than generic realism.

Let these become richer:
stitched-field depth,
surface tactility,
density variation,
embroidered segmentation,
image-body.

Keep unchanged:
branch purity,
stitch-built construction,
cloth identity,
branch-correct mirror rule,
community-owned grammar.

Avoid:
mixed Kutchi look,
generic craft ornament,
print pretending to be stitch,
one embroidered section inside an unrelated image.

Image-to-Image

Convert this source image into a creative 2D + 3D Kutch embroidery translation from Gujarat, locked strictly to [CHOSEN_BRANCH].

Preserve the source image's main action, subject count, and readability, but reconstruct the full image through the chosen branch's embroidery grammar.

Replace ordinary surfaces with stitched cloth behavior.
Replace general decoration with branch-specific stitch construction.
Replace broad folk styling with [CHOSEN_BRANCH] logic:
its field density,
its motif or geometric system,
its outlining behavior,
its mirror rule if relevant,

its surface-building method.

Allow the image to gain layered embroidered depth, richer textile tactility, stronger segmentation, and more visible image-body.

But do not let it become full realism.

It must still behave like a dimensionalized embroidered field.

Do not paste embroidery onto a normal image.

Do not let humans, trees, and animals remain generic.

Do not mix branches.

The result must feel like [CHOSEN_BRANCH] embroidery logic has gained image-body across the whole frame.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D realistic dimensional world generated from Kutch embroidery of Gujarat, but locked strictly to one branch only: [CHOSEN_BRANCH].

The realism must remain fully governed by the chosen embroidery grammar, not by generic realism.

Build the whole world through:

branch-specific stitch behavior,

branch-specific density,

branch-specific geometry or motif logic,

branch-correct mirror or non-mirror rule,

embroidered cloth-surface construction,

community-owned branch identity.

The world must feel as if [CHOSEN_BRANCH] embroidery intelligence has become a complete dimensional reality.

Figures, clothing, objects, architecture, surfaces, environment, and spatial divisions must all belong to one branch system.

Stitches must still feel stitched, not printed.

Mirrors must only appear if the chosen branch genuinely uses them.

Surface logic must still feel cloth-built, not decorative appliqué on realism.

Humans must be rebuilt through embroidered segmentation, garment logic, density order, and branch-specific field structure while skin remains clean and human.

Animals must be rebuilt through branch-correct stitched body logic.

Trees must be rebuilt through embroidered clustering and branch-owned pattern order.

Ground, props, and architecture must all inherit the chosen branch's textile intelligence.

Make the space fully volumetric and believable, but do not let realism erase the embroidered origin.

This is not normal realism with a Kutchi border.
This is one Kutch embroidery branch becoming world structure.

Avoid:

mixed-branch Kutchi skin,
generic mirror-work realism,
printed embroidery look,
boho-craft styling,
one embroidered costume patch inside a non-embroidered world,
architecture monopolizing the style.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a full 3D realistic dimensional world generated from Kutch embroidery of Gujarat, locked to [CHOSEN_BRANCH].

Style system that must remain unchanged:

one branch only,
branch-specific stitch grammar,
branch-specific density logic,
branch-specific geometry or motif bias,
branch-correct mirror rule if relevant,
cloth-surface construction,
full-frame [CHOSEN_BRANCH] consistency.

Translate the world like this:

[MAIN SUBJECT / MAIN FIELD] becomes a fully dimensional
[CHOSEN_BRANCH]-governed embroidered presence.

[HUMANS] become volumetric but remain organized through branch-specific stitched segmentation, garment-field rhythm, and embroidered surface order.

[ANIMALS] become volumetric but remain shaped by the chosen branch's stitched logic.

[TREES / FOLIAGE] become volumetric but remain organized through embroidered clustering and field structure.

[OBJECTS / GROUND / ARCHITECTURE] continue to structure the world through
[CHOSEN_BRANCH] embroidery order.

[ENVIRONMENT] becomes a believable spatial field organized by branch embroidery intelligence rather than generic realism.

Increase:

full spatial depth,
material presence,
embroidered tactility,
surface segmentation,
field continuity,
world completion.

Do not lose:
branch purity,
stitch-built logic,
cloth identity,
community-specific grammar,
branch-correct mirror sensitivity.

Avoid:
merged Kutchi style,
generic ornate embroidery,
printed look,
mirror everywhere,
surface-only styling,
embroidery as accessory instead of world structure.

Image-to-Image

Convert this source image into a full 3D realistic Kutch embroidery world from Gujarat, locked strictly to [CHOSEN_BRANCH].

Preserve the source image's main composition, subject relationships, and readability, but rebuild the whole image through the chosen branch's embroidery-world grammar.

Replace normal realism with a world governed by branch-specific stitch construction, density logic, field order, cloth segmentation, and mirror or non-mirror use according to [CHOSEN_BRANCH].

If the source contains figures, garments, props, objects, architecture, animals, trees, ground, or environment, convert all of them so they behave as if generated from [CHOSEN_BRANCH] embroidery intelligence.

Keep the stitched surface structurally plausible.

Keep density and segmentation branch-correct.

Keep mirrors absent unless the chosen branch genuinely requires them.

Keep the whole frame organized by embroidered field order rather than generic realistic arrangement.

Do not simply apply embroidery over the image.

Do not leave secondary forms generic.

Do not turn it into one merged Kutchi embroidery fantasy.

The final result must feel like [CHOSEN_BRANCH] itself generated the world.
