

Bagh print - Madhya Pradesh

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **authentic source-faithful grammar of Bagh print from Bagh village, Madhya Pradesh**. Build the result as a **hand block-printed textile system**, not as generic ethnic patterning, not as digital wallpaper, not as freehand floral cloth painting, and not as realism with motifs pasted on top. The entire image must feel born from **prepared cloth, carved wooden block construction, repeat discipline, border-field-filler hierarchy, natural-dye red-black print memory, and usable textile-surface logic**.

The image must read first as **printed cloth**. Motifs should feel as though they were carved into wooden blocks, stamped by hand, repeated through disciplined human registration, and absorbed into a matte cloth body. Use a **red and black dominant natural-dye palette over a light ground**, with slightly softened cloth absorption rather than synthetic flatness. The motif world should stay within **floral, geometric, jaali-like, and nature-derived repeat units**, organized through textile zoning rather than free decorative scatter.

Make the surface clearly textile-based:

- cloth body remains primary
- motifs remain block-printable
- repetition remains structured and hand-registered
- field, border, filler, interval, and edge behavior remain visible
- the result feels wearable, drapeable, and usable as real fabric

Do not let the image become:

- generic Indian textile design
- machine-perfect tiling
- wallpaper logic
- vector-clean ornamental graphics
- painterly floral fabric
- embroidery logic
- weaving logic
- screen-print logic
- only color plus motif without true block-print structure

If the frame expands beyond a swatch or garment detail, every visible element must still belong to the same Bagh textile intelligence.

Reusable Variable Template

Create **[SUBJECT / CLOTH OBJECT / TEXTILE APPLICATION / SCENE]** in the **authentic source-faithful grammar of Bagh print from Madhya Pradesh**.

Core style system to preserve:

- printed cloth-body identity
- carved wooden block construction
- repeat discipline
- field / border / filler hierarchy
- natural-dye matte red-black print memory
- hand registration life
- usable textile-surface logic
- whole-frame textile intelligence

Translate the image like this:

- **[MAIN SURFACE OR PRIMARY AREA]** becomes a Bagh-printed cloth field with block-repeat organization
- **[SECONDARY AREAS / BORDERS / PANELS / EDGES]** become border, filler, band, or interval zones in the same print grammar
- **[MOTIF FAMILY]** becomes block-printable floral, geometric, jaali-like, or nature-derived repeat units
- **[TEXTILE OBJECT / GARMENT / FURNISHING FORM]** obeys cloth drape, seam, fold, and handling logic
- **[IF FIGURES OR OBJECTS APPEAR]** they must also be rebuilt through block-simplified textile logic, not left generic

Keep:

- cloth first
- block carvability
- repeat structure
- hand-made registration discipline
- matte absorbed dye behavior
- Bagh red-black-light-ground identity
- usable textile order

Avoid:

- digital wallpaper
- generic ethnic print
- freehand floral painting
- machine-sterile repetition
- synthetic glossy color
- motif scatter without zoning
- realism with surface pattern added later

Image-to-Image

Convert this source image into the **authentic source-faithful grammar of Bagh print from Madhya Pradesh**.

Preserve the source image's **subject count, major divisions, core relationships, and overall readability**, but rebuild the full image through **hand block-printed textile intelligence**. Replace ordinary realism, generic design, or arbitrary pattern styling with:

- cloth-body identity
- carved wooden block repeat construction
- field / border / filler hierarchy
- natural-dye red-black matte print memory
- usable draped textile continuity

Do not simply add Bagh motifs onto clothing or background areas. Rebuild the image so the whole frame feels like it was generated from a **Bagh print cloth system**. If the source contains objects, figures, surfaces, edges, or environmental divisions, translate them into the same block-built textile logic. The result should feel as though the image has become **printed cloth**, not as though cloth patterns were pasted onto a normal image.

Do not allow:

- wallpaper tiling
- generic florals
- vector-clean repetition
- digital print look
- unrelated textile-style mixing
- realism-first image with Bagh pattern overlay

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic handcrafted dimensional version of Bagh print from Madhya Pradesh**. The image must still read first as a **hand block-printed textile object**, but now with richer tactile presence, stronger material body, clearer drape and fold behavior, and more visible handmade dimensionality. This is not a full cinematic world and not an embossed relief object. It is a **dimensionalized textile-image object** still governed by Bagh print logic.

Keep the full source-rooted structure:

- cloth-body identity remains primary

- motifs remain carved-block-built and repeatable
- field / border / filler hierarchy remains intact
- natural-dye red-black memory remains matte and process-rooted
- hand registration life remains visible
- textile usability remains legible

Allow more tactile handmade qualities:

- slightly deeper surface body
- richer fold and seam behavior
- more present cloth handling
- stronger material thickness and textile objecthood
- clearer spatial separation between field, border, and repeat zones

Do not let the dimensionality turn the textile into:

- embroidery
- appliqué
- relief carving
- brocade
- wallpaper board
- generic artisan texture
- decorative ethnic object with no print logic

The result should feel like **Bagh print cloth with stronger handmade dimensional presence**, not like another craft system.

Reusable Variable Template

Create **[SUBJECT / TEXTILE OBJECT / APPLICATION / IMAGE]** in the **authentic handcrafted dimensional version of Bagh print from Madhya Pradesh**.

Preserve these style-core rules:

- printed cloth remains the host body
- motifs remain carved-block-derived
- repeat remains disciplined and hand-registered
- field / border / filler hierarchy remains structural
- natural-dye red-black matte memory remains active
- textile use logic remains stronger than decorative styling

Translate the image like this:

- **[MAIN SURFACE]** becomes a tactile Bagh-printed cloth field with dimensional textile body

- **[SECONDARY ZONES / EDGES / PANELS / BORDERS]** become more materially distinct but remain in the same print hierarchy
- **[MOTIFS]** remain block-printable and repeat-driven, not freehand or embossed
- **[SEAMS / FOLDS / DRAPE / HANDLING]** become more readable and tactile
- **[IF FIGURES OR OBJECTS APPEAR]** they must still obey textile-born block logic and not revert to generic realism

Let these become richer:

- cloth thickness
- fold behavior
- tactile print depth
- handled-surface realism
- dimensional zone separation

Keep unchanged:

- block-print origin
- cloth-body priority
- repeat discipline
- Bagh identity
- natural-dye memory
- usable textile logic

Avoid:

- embossed craft object look
- generic artisan texture
- appliqué / stitched interpretation
- wallpaper drift
- realism-first scene with Bagh surfaces added later

Image-to-Image

Convert this source image into the **authentic handcrafted dimensional version of Bagh print from Madhya Pradesh**.

Preserve the source image's **main divisions, major relationships, and readability**, but reconstruct the whole image as a **tactile hand block-printed textile object**. Replace ordinary surfaces with:

- cloth-body presence
- carved-block motif logic
- repeat-built zoning
- natural-dye matte red-black memory
- fold, seam, and drape continuity

- hand registration life

Do not simply add pattern and texture. Rebuild the image so it feels like the entire image has become a **dimensional textile object generated by Bagh print intelligence**. The print must still feel block-born and repeat-built. The cloth must still feel usable. The dimensionality must remain textile-dimensionality, not relief-object dimensionality.

Do not allow:

- decorative ethnic texturing
- embossed motif simulation
- generic handcrafted surface noise
- upholstery look without true print logic
- realism-first image with block motifs pasted on top

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic version of Bagh print from Madhya Pradesh**, where the entire frame becomes a believable world generated by **Bagh hand block-printed textile intelligence**. This is not realism plus Indian textile decoration. This is not a normal scene with Bagh motifs on clothing and props. The whole image must behave as though **Bagh print itself generated the world**.

Translate the native Bagh structure into world grammar:

- cloth-body logic becomes world-body logic
- block-repeat units become structural world units
- border / field / filler hierarchy becomes compositional and environmental hierarchy
- hand registration rhythm becomes spatial rhythm
- natural-dye red-black memory becomes world color law
- usable textile continuity becomes whole-frame continuity

Every visible element must belong to one Bagh-generated system:

- figures
- objects
- props
- surfaces
- environment
- architecture
- foreground
- midground
- background

- edges
- atmospheric organization

The world must still remain unmistakably Bagh-rooted:

- motifs remain block-constructable in spirit
- repeat intelligence remains active
- red-black-light-ground memory remains an anchor
- nothing important can stay generic
- the style cannot survive only in costume or furnishing

Do not let the image become:

- realism-first scene with textile overlay
- ornate Indian fantasy environment
- wallpaper-based world design
- broad craft-inspired aesthetic
- generic ethnic spectacle
- pattern-rich decor with no block-print structure

The result should feel like **Bagh print became a cinematic world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD / EVENT]** as a **fully volumetric cinematic version of Bagh print from Madhya Pradesh.**

Style system that must remain unchanged:

- Bagh block-print logic remains primary
- cloth-body memory remains active even in world translation
- repeat discipline remains structural
- border / field / filler hierarchy survives in translated form
- natural-dye red-black world memory remains present
- whole-frame system unity remains unbroken

Translate the scene like this:

- **[MAIN SUBJECT OR SPATIAL FOCUS]** becomes a fully volumetric form generated by Bagh block-print intelligence
- **[SECONDARY FIGURES / OBJECTS / FORMS]** become repeat-aware, block-constructed, system-consistent elements
- **[SURFACES / EDGES / PANELS / STRUCTURES]** inherit border-field-filler logic
- **[ENVIRONMENT / ARCHITECTURE / GROUND / SKY]** becomes a world organized through repeat rhythm, block construction, and textile-derived hierarchy

- **[COLOR SYSTEM]** stays anchored in natural-dye red-black-light-ground memory, translated cinematically rather than abandoned

Increase:

- world depth
- material-light interaction
- spatial layering
- environment completion
- cinematic readability

Do not lose:

- block-print origin
- repeat intelligence
- Bagh identity
- system-level cloth memory
- whole-frame belonging

Avoid:

- realism with Bagh patterns pasted on top
- style surviving only in costume
- generic ethnic world-building
- ornate décor replacing print logic
- wallpaper repetition
- non-Bagh textile drift

Image-to-Image

Convert this source image into a **fully volumetric cinematic world generated from the grammar of Bagh print from Madhya Pradesh.**

Preserve the source image's **subject count, main action, basic spatial relationships, and readability**, but rebuild the entire frame through:

- block-print construction logic
- repeat-built structural organization
- border / field / filler hierarchy translated into spatial order
- natural-dye red-black cloth memory translated into cinematic material law
- total system unity across all visible elements

Do not merely place Bagh motifs onto fabric surfaces. Rebuild the whole image so it feels like **Bagh print became world architecture, object design, figure logic, surface hierarchy, and spatial rhythm.** Nothing important may remain in neutral realism. Every visible form must feel generated from the same Bagh system.

Do not allow:

- realism-first world plus textile ornament
- costume-only translation
- wallpaper environments
- decorative Indian craft fantasy
- unrelated floral-geometric styling
- partial system conversion
