

Bead-cluster,necklace - Nagaland

V1 — Authentic Style

Universal Hard Prompt

Create an image built from the authentic bead-cluster body-surface world of Nagaland. Do not treat this as generic tribal jewelry, boho necklace styling, fashion accessory layering, or a normal world with colorful beads added later. Build the entire image as if it is generated by a Naga upper-body ornament system where layered bead strings, clustered neck-and-chest occupation, repeated small hard units, local stringing logic, and public body-surface readability control every decision.

The image must obey this branch law:

- the world is generated from clustered body-surface architecture, not jewelry display
- beads must feel strung, layered, repeated, and gathered into visible neck-and-chest fields
- the branch must read through grouped strands, tiering, hanging rhythm, and frontal body emphasis
- body-zone occupation must remain primary
- the system must feel assembled rather than manufactured as a single object
- the result must feel socially visible and publicly readable

Translate the full world through this bead-cluster system:

- shape must become tiered, looped, repeated, hanging, clustered, and body-facing
- form must become strand-built and modular rather than sculpted as one object
- space must become neck-chest-centered body-surface space rather than ordinary scenic space
- light must reveal strand layers, bead repetition, clustering, body contact, and hanging depth
- shadow must support overlap, suspension, and layered cluster separation without turning the scene into glamour jewelry photography
- value must remain clear enough to separate cluster zones and strand groups
- movement must feel like layered hanging response: bounce, shift, overlap, contact, and small-unit motion against the body
- environment must also obey bead-cluster law: characters, animals, props, architecture, mountains, trees, and spatial divisions must all feel generated by layering, repetition, modular small-unit accumulation, hanging rhythm, and frontal clustered visibility

Keep the branch source-rooted:

layered bead strings, clustered neck-and-chest occupation, modular repetition, assembly logic, public readability, and body-surface architecture.

Avoid:

generic bead jewelry, boutique necklace styling, boho fashion layering, tabletop accessory display, decorative color without structure, and ordinary realism with bead necklaces inserted.

The final result must feel like a true Nagaland bead-cluster world: layered, modular, strung, body-facing, publicly readable, and fully translated across the whole frame.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of a bead-cluster body-surface world from Nagaland.

Core style system to preserve:

- layered neck-and-chest occupation
- stringed assembly logic
- repeated small hard units
- clustered public readability
- hanging tier structure
- body-surface emphasis
- whole-frame coherence under bead-cluster law

Translate the scene like this:

- [MAIN SUBJECT] becomes governed by layered clustered bead architecture rather than generic realism
- [SECONDARY SUBJECTS] obey the same tiered hanging repetition and body-facing ornament law
- [OBJECTS / PROPS] become modular, repeated, strung, grouped, or cluster-built rather than isolated single objects
- [ANIMALS / TREES / LANDSCAPE / ARCHITECTURE] become shaped by repetition, tiering, suspended rhythm, strand logic, and frontal clustered visibility
- [ENVIRONMENT / BACKGROUND] becomes a world of grouped modular units, hanging intervals, and layered surface occupation
- [LIGHT / SHADOW] preserve layered strand readability rather than create jewelry glamour
- [SPACE / DEPTH] become cluster-space and body-surface space rather than ordinary scenic depth
- [MOVEMENT / ACTION] become hanging shift, layered bounce, modular contact, and body-surface response

Keep:

cluster law, strand layering, repeated small-unit rhythm, assembly visibility, neck-chest emphasis, public body readability.

Avoid:

generic necklace design, boho styling, fashion accessory language, decorative color scatter, and ordinary realism with beads added afterward.

The final result must feel like the whole world was generated by Nagaland bead-cluster law.

Image-to-Image

Convert this source image into an authentic Nagaland bead-cluster body-surface world.

Preserve the source image's subject count, core action, main relationships, and readable scene meaning, but rebuild the entire image through layered bead-cluster logic. Do not simply add colorful bead strings or ethnic necklaces. Reconstruct all visible forms so that shape, form, light, shadow, value, movement, and environment obey clustered modular body-surface law.

The transformed image must become:

- cluster-built rather than accessorized
- layered rather than merely decorated
- modular rather than one-piece
- body-facing rather than display-oriented
- strung and assembled rather than fashion-styled
- unified across figures, animals, props, architecture, terrain, and background

Do not let only the necklace become branch-correct while the rest of the frame stays generic.

Do not let color replace cluster structure.

Do not let realism overpower upper-body body-surface law.

The final result must feel like the source image has been rebuilt by a Nagaland bead-cluster civilization, not decorated with bead accessories.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image world rooted in the bead-cluster body-surface grammar of Nagaland. This must not become generic ornamental fantasy, a normal stylized world with bead necklaces, or decorative color-rich accessory design. It should feel like authentic layered cluster logic has expanded into a broader world where characters, animals, architecture, mountains, props, vegetation, and environment are all rebuilt through modular repetition, hanging tiering, and frontal body-surface visibility.

Keep the deep structure unchanged:

- clustered body-surface architecture remains primary
- stringed assembly remains visible
- repeated small-unit logic remains structural

- upper-body occupation remains source-rooted
- hanging rhythm remains central
- the whole frame remains generated by bead-cluster law

Now let the world become richer:

- characters can be built from layered loops, repeated modules, cluster tiers, and strand-group hierarchies
- animals can inherit hanging modular segmentation and clustered body-surface massing
- architecture can behave like suspended tiers, grouped modules, looped structures, and repeated hanging forms
- mountains, trees, ground, and sky can become organized by cluster accumulation, repetition, tiering, and frontal modular rhythm
- shadows can deepen through overlapping layers and hanging depth
- space can become a world of modular accumulation and body-facing cluster order rather than ordinary landscape

Translate everything:

color, shape, line, form, light, shadow, volume, depth, character, animal, object, architecture, environment, and total scene behavior must all be rebuilt through bead-cluster grammar.

Avoid:

generic jewelry fantasy, ornament spread, decorative bead color fields, boho worlds, and ordinary stylized scenes with necklaces added.

The final result must feel like the Nagaland bead-cluster branch itself has generated an imaginative unified 2D + 3D world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the bead-cluster body-surface world of Nagaland.

Preserve these style-core rules:

- clustered body-surface law remains primary
- stringed assembly remains structural
- repeated small-unit logic remains visible
- upper-body occupation remains central
- hanging tier rhythm remains source-rooted
- the whole frame remains generated by bead-cluster law

Translate the scene like this:

- [MAIN SUBJECT] becomes a figure built from layered modular cluster logic rather than generic realism
- [SECONDARY SUBJECTS] obey the same tiered hanging repetition and body-facing ornament order

- [ANIMALS / OBJECTS / PROPS] become generated by clustered modular units, looped groups, and hanging repetition
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become organized by accumulation, repetition, loops, strands, and grouped suspended structure
- [ENVIRONMENT] becomes a world of modular clustered visibility and layered surface occupation
- [LIGHT / SHADOW] reveal overlap, hanging depth, and cluster hierarchy
- [SPACE / DEPTH] become tiered cluster-space rather than ordinary scenic depth
- [MOVEMENT / ACTION] become hanging response, layered shift, repeated small-unit motion, and cluster-world interaction

Keep:

cluster law, modular repetition, hanging rhythm, body-facing visibility, stringed assembly, upper-body emphasis.

Avoid:

generic ornamental fantasy, jewelry styling, accessory-rich fashion worlds, decorative bead color without structure, and ordinary stylized scenes with necklaces added.

The final result must feel like the world was redesigned by Nagaland bead-cluster intelligence.

Image-to-Image

Convert this source image into a creative 2D + 3D Nagaland bead-cluster body-surface world.

Preserve the source image's core action, readable relationships, and main scene meaning, but rebuild every visible element through layered modular cluster logic. Do not stop at adding colorful necklaces or bead texture. Reconstruct shape, form, light, shadow, volume, depth, character design, environment, and spatial behavior so the whole image behaves like a world generated by repeated hanging body-surface architecture.

The transformed image must become:

- cluster-generated rather than accessory-styled
- layered and modular rather than decorative
- body-facing rather than display-oriented
- assembled rather than fashion-designed
- unified across people, animals, props, architecture, terrain, and background

Do not let only selected garments or necklaces become branch-correct.

Do not let the environment remain generic.

Do not let bright modular detail replace whole-world cluster law.

The final result must feel like the Nagaland bead-cluster branch has expanded into a full imaginative world-state.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the bead-cluster body-surface grammar of Nagaland. This must not become ordinary realism with layered necklaces added later. It must feel like the entire world has become real under cluster law: modular repeated small units, stringed assembly, hanging tiers, upper-body occupation, and visible body-surface architecture controlling every visible element.

Translate the full style into dimensional reality:

- shape must remain tiered, modular, looped, and cluster-built
- form must remain stringed-assembly-governed rather than jewelry-realism-governed
- color must remain under grouped cluster logic rather than decorative fashion color
- light must reveal hanging depth, layer overlap, modular repetition, and body contact
- shadow must support suspended tiers and cluster separation without turning the scene into glamour realism
- volume must behave like real layered body-surface occupation and cluster-generated world form
- depth must be built through grouped repetition, accumulated layers, and suspended modular fields rather than generic scenic realism
- characters, animals, props, architecture, terrain, and all environmental structures must feel generated through bead-cluster law, not merely styled by it

Keep realism under branch control:

believable bead weight, real strand tension, visible hanging tiers, layered body contact, modular repetition, and total cluster-world coherence.

Avoid:

ordinary realism with necklaces, jewelry styling realism, fashion accessory glamour, colorful ornament fantasy, and prop-only bead accents.

The final result must feel like the Nagaland bead-cluster branch itself has become a believable living world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the bead-cluster body-surface grammar of Nagaland.

Style system that must remain unchanged:

- layered cluster law
- repeated modular small units

- stringed assembly logic
- upper-body occupation
- hanging tier rhythm
- whole-frame bead-cluster coherence

Translate the scene like this:

- [MAIN SUBJECT] becomes a fully dimensional figure built from clustered modular tiers and stringed body-surface structure
- [SECONDARY SUBJECTS] obey the same hanging layered cluster law
- [ANIMALS / OBJECTS / PROPS] become believable forms generated by repeated modular accumulation and visible suspension logic
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become real spatial forms organized by grouped repetition, loops, strands, and suspended tiers
- [LIGHT / SHADOW] become realistic but still cluster-structure-revealing
- [SPACE / DEPTH] become believable layered cluster-space rather than generic realism-space
- [MOVEMENT / PHYSICS] become real hanging response, layered shift, and modular contact

Increase:

bead realism, strand tension, layered depth, body contact, world completion, cluster coherence.

Do not lose:

modular repetition, hanging tier law, upper-body emphasis, stringed assembly, branch-born coherence.

Avoid:

normal realism with layered necklaces, jewelry glamour, accessory-heavy fashion realism, and ordinary scenes with bead accents.

The final result must feel like a real Nagaland bead-cluster world.

Image-to-Image

Convert this source image into a full 3D realistic Nagaland bead-cluster body-surface world.

Preserve the source image's subject count, readable action, and main relationships, but rebuild all visible forms through layered modular cluster logic. Replace ordinary realism with stringed assembly, hanging tiers, grouped repetition, upper-body occupation, and cluster-generated world behavior.

The transformed image must become:

- cluster-generated rather than accessory-decorated
- modular and layered rather than fashion-styled
- body-facing rather than display-oriented

- real in volume but still controlled by bead-cluster law
- unified across figures, animals, props, architecture, terrain, and environment

Do not let only selected necklaces become branch-correct.

Do not let realism take over.

Do not leave the rest of the world generic.

The final result must feel like the Nagaland bead-cluster world has become believable reality.
