

Hard-ornament branch - Nagaland

V1 — Authentic Style

Universal Hard Prompt

Create an image built from the authentic hard-ornament body-surface world of Nagaland. Do not treat this as generic jewelry, fashion bracelets, costume arm cuffs, or a normal world with hard ornaments added later. Build the entire image as if it is generated by a rigid body-extension system where armlets, bangles, leg rings, encircling hard forms, material firmness, and body-edge definition control every decision.

The image must obey this branch law:

- the world is generated from rigid body-extension logic, not jewelry variety
- ornaments must feel hard, gripping, encircling, bracing, and body-defining
- limb-zone emphasis must remain primary
- body boundaries must become more explicit through rigid form
- every major form must feel structurally edged, banded, or constrained
- the result must feel materially firm rather than decorative

Translate the full world through this hard-ornament system:

- shape must become ringed, banded, cuff-like, encircling, rigid, and boundary-defining
- form must become body-edge structure rather than accessory form
- space must become limb-zone and edge-zone space rather than ordinary scenic space
- light must reveal hard contour, rigid contact, edge thickness, and structural pressure on the body
- shadow must support encirclement, body grip, and boundary emphasis rather than jewelry shine
- value must remain organized by edge contrast and rigid zoning
- movement must feel like body-extension motion: constrained, carried with the limb, or shifted as one hard unit
- environment must also obey hard-ornament law: characters, animals, props, architecture, mountains, trees, and ground must all feel generated by rigid banding, encirclement, bracing, and structural edge emphasis

Keep the branch source-rooted:

rigid body-extension logic, limb-zone authority, hard encircling form, silhouette modification, and public body-edge readability.

Avoid:

generic bracelets, fashion cuffs, accessory styling, metallic jewelry glamour, soft ornament motion, and ordinary realism with armlets inserted.

The final result must feel like a true Nagaland hard-ornament world: rigid, encircling, body-defining, structurally edged, and fully translated across the whole frame.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of a hard-ornament body-surface world from Nagaland.

Core style system to preserve:

- rigid body-extension logic
- encircling limb-zone authority
- hard material firmness
- body-edge definition
- silhouette modification
- structural banding
- whole-frame coherence under hard-ornament law

Translate the scene like this:

- [MAIN SUBJECT] becomes governed by rigid encircling form and body-edge structure rather than generic realism
- [SECONDARY SUBJECTS] obey the same boundary-defining hard-ornament law
- [OBJECTS / PROPS] become banded, braced, cuffed, ringed, or structurally edged rather than decorative
- [ANIMALS / TREES / LANDSCAPE / ARCHITECTURE] become shaped by rigid contour, encircling zones, band law, and hard edge emphasis
- [ENVIRONMENT / BACKGROUND] becomes a world of boundaries, braces, bands, and structurally gripped forms
- [LIGHT / SHADOW] preserve hard contact and edge readability rather than jewelry shine
- [SPACE / DEPTH] become edge-space and encircled zone-space rather than ordinary scenic depth
- [MOVEMENT / ACTION] become constrained structural motion, body-extension response, and rigid-zone interaction

Keep:

encircling rigidity, body-zone grip, silhouette change, material firmness, structural edges.

Avoid:

generic bangles, fashion cuffs, jewelry display, decorative hard accessories, metallic glamor, and ordinary realism with armlets.

The final result must feel like the whole world was generated by Nagaland hard-ornament law.

Image-to-Image

Convert this source image into an authentic Nagaland hard-ornament body-surface world.

Preserve the source image's subject count, core action, main relationships, and readable scene meaning, but rebuild the entire image through rigid body-extension logic. Do not simply add bracelets or armlets. Reconstruct all visible forms so that shape, form, light, shadow, value, movement, and environment obey encircling boundary law.

The transformed image must become:

- rigidly structured rather than accessorized
- body-defining rather than decorative
- encircling rather than loosely attached
- materially firm rather than fashion-styled
- boundary-driven rather than jewelry-driven
- unified across figures, animals, props, architecture, terrain, and background

Do not let only the armlets become branch-correct while the rest of the frame stays generic.

Do not let material finish replace structural body-edge law.

Do not let realism overpower rigid-boundary order.

The final result must feel like the source image has been rebuilt by a Nagaland hard-ornament civilization, not decorated with jewelry.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image world rooted in the hard-ornament body-surface grammar of Nagaland. This must not become generic accessory fantasy, a normal stylized world with armlets and rings, or decorative metallic design. It should feel like authentic rigid body-extension logic has expanded into a broader world where characters, animals, architecture, mountains, props, and environment are all rebuilt through encircling bands, structural edge law, and silhouette-defining hard zones.

Keep the deep structure unchanged:

- rigid body-extension law remains primary
- encircling zone authority remains visible
- hard material firmness remains structural
- body-edge definition remains central
- silhouette modification remains source-rooted
- the whole frame remains generated by hard-ornament law

Now let the world become richer:

- characters can be built from cuffs, rings, rigid bands, braced joints, and hard edge segmentation
- animals can inherit encircling zones and structurally bounded body parts
- architecture can behave like braced rings, banded enclosures, rigid thresholds, and constrained edges
- mountains, trees, ground, and sky can become organized by edge emphasis, ring structures, and bounded structural zones
- shadows can deepen through contact and contour tension
- space can become a world of encirclement, brace, limit, and structural boundary rather than ordinary landscape

Translate everything:

color, shape, line, form, light, shadow, volume, depth, character, animal, object, architecture, environment, and total scene behavior must all be rebuilt through hard-ornament grammar.

Avoid:

generic jewelry fantasy, metallic accessory worlds, costume-armlet styling, decorative rigid details, and ordinary stylized scenes with hard ornaments added.

The final result must feel like the Nagaland hard-ornament branch itself has generated an imaginative unified 2D + 3D world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the hard-ornament body-surface world of Nagaland.

Preserve these style-core rules:

- rigid body-extension law remains primary
- encircling zone authority remains structural
- hard edge definition remains visible
- body-boundary control remains source-rooted
- silhouette modification remains central
- the whole frame remains generated by hard-ornament law

Translate the scene like this:

- [MAIN SUBJECT] becomes a figure built from bands, cuffs, rigid zones, and edge-defining structure rather than generic realism
- [SECONDARY SUBJECTS] obey the same encircling boundary logic
- [ANIMALS / OBJECTS / PROPS] become generated by rigid zones, ring structures, braces, and structural limits
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become organized by hard contour, banded thresholds, edge law, and rigid spatial segmentation
- [ENVIRONMENT] becomes a world of structural boundaries, braces, and encircled forms
- [LIGHT / SHADOW] reveal hard contact, contour, and grip

- [SPACE / DEPTH] become boundary-space and rigid-zone space rather than ordinary scenic depth
- [MOVEMENT / ACTION] become constrained body-extension motion and structurally limited interaction

Keep:

encircling rigidity, boundary law, silhouette change, hard edge emphasis, material firmness.

Avoid:

generic accessory fantasy, jewelry styling, costume armlet worlds, decorative metallicity, and ordinary stylized scenes with rigid ornaments.

The final result must feel like the world was redesigned by Nagaland hard-ornament intelligence.

Image-to-Image

Convert this source image into a creative 2D + 3D Nagaland hard-ornament body-surface world.

Preserve the source image's core action, readable relationships, and main scene meaning, but rebuild every visible element through rigid body-extension logic. Do not stop at adding armlets, cuffs, or bangles. Reconstruct shape, form, light, shadow, volume, depth, character design, environment, and spatial behavior so the whole image behaves like a world generated by encircling boundary law.

The transformed image must become:

- boundary-generated rather than accessory-styled
- rigid rather than decorative
- structurally edged rather than loosely adorned
- body-defining rather than fashion-led
- unified across people, animals, props, architecture, terrain, and background

Do not let only selected ornaments become branch-correct.

Do not let the environment remain generic.

Do not let hard details replace whole-world rigid-boundary law.

The final result must feel like the Nagaland hard-ornament branch has expanded into a full imaginative world-state.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the hard-ornament body-surface grammar of Nagaland. This must not become ordinary realism with armlets, bangles, or leg rings added later. It must feel like the entire world has become real under rigid body-extension law: encircling zones, hard contour, silhouette-defining bands, structural edges, and material firmness controlling every visible element.

Translate the full style into dimensional reality:

- shape must remain ringed, banded, rigid, and boundary-defining
- form must remain hard-structure-governed rather than accessory-realism-governed
- color must remain under material firmness and edge contrast rather than decorative taste
- light must reveal hard contour, body grip, edge thickness, and structural pressure
- shadow must support encirclement, body-edge contact, and rigid zone separation without creating jewelry glamour
- volume must behave like real hard body-extension and structurally bounded world form
- depth must be built through braces, bands, edges, and rigid spatial segmentation rather than generic scenic realism
- characters, animals, props, architecture, terrain, and all environmental structures must feel generated through hard-ornament law, not merely styled by it

Keep realism under branch control:

believable rigid material weight, true body contact, strong contour, encircling force, and total boundary-world coherence.

Avoid:

ordinary realism with armlets, jewelry realism, accessory glamour, costume-metal worlds, and prop-only hard ornaments.

The final result must feel like the Nagaland hard-ornament branch itself has become a believable living world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the hard-ornament body-surface grammar of Nagaland.

Style system that must remain unchanged:

- rigid body-extension law
- encircling zone authority
- hard edge definition
- body-boundary control
- silhouette modification
- whole-frame hard-ornament coherence

Translate the scene like this:

- [MAIN SUBJECT] becomes a fully dimensional figure built from rigid bands, cuffs, edge zones, and structural body-boundary law

- [SECONDARY SUBJECTS] obey the same encircling rigid logic
- [ANIMALS / OBJECTS / PROPS] become believable forms generated by braces, rings, bands, and hard structural boundaries
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become real spatial forms organized by thresholds, encircled zones, rigid contour, and structural limits
- [LIGHT / SHADOW] become realistic but still hard-contour-revealing
- [SPACE / DEPTH] become believable rigid-zone space rather than generic realism-space
- [MOVEMENT / PHYSICS] become real constrained body-extension motion and hard-boundary interaction

Increase:

material firmness, contour realism, body contact, structural depth, boundary-world completion.

Do not lose:

encircling rigidity, edge law, silhouette change, body-zone authority, branch purity.

Avoid:

normal realism with armlets, jewelry realism, accessory-heavy styling, costume cuff worlds, and ordinary scenes with hard ornaments.

The final result must feel like a real Nagaland hard-ornament world.

Image-to-Image

Convert this source image into a full 3D realistic Nagaland hard-ornament body-surface world.

Preserve the source image's subject count, readable action, and main relationships, but rebuild all visible forms through rigid body-extension logic. Replace ordinary realism with encircling boundary law, hard contour, body-edge emphasis, structural banding, and hard-generated world behavior.

The transformed image must become:

- boundary-generated rather than ornament-decorated
- rigid rather than accessory-styled
- structurally edged rather than loosely adorned
- real in volume but still controlled by hard-ornament law
- unified across figures, animals, props, architecture, terrain, and environment

Do not let only selected ornaments become branch-correct.

Do not let realism take over.

Do not leave the rest of the world generic.

The final result must feel like the Nagaland hard-ornament world has become believable reality.
