

Lambani embroidery - Karnataka

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of **traditional Sandur Lambani Embroidery from Karnataka**. Build the image as if it comes from a real **Lambani textile world** in which the cloth is not merely decorated but **constructed** through patchwork, appliqué, mirror insertion, dense hand embroidery, attached beads, shells, coins, tassels, and metallic accents. The image must read first as **Sandur Lambani Embroidery**, not as generic mirror work, not as Kutch-style embroidery, not as printed ethnic fabric, and not as fashion styling with decorative embellishment added afterward.

Use real construction logic. The surface must feel **built from stitched additions**. Every visible zone should feel assembled through cloth pieces, reinforced seams, stitched borders, secured mirror nodes, attached ornaments, and hand-built field divisions. Do not make the textile look like one uninterrupted printed fabric with decorative motifs placed on top.

Use real whole-world translation logic. Do not only change color, textile texture, or costume. Rebuild **shape logic, silhouette logic, contour behavior, value grouping, light response, spacing, surface hierarchy, and world physics** through Lambani craft intelligence. The world must feel generated by **segmented cloth fields, stitched joins, reflective mirror nodes, and attached surface units** rather than by ordinary realism.

Use real mirror logic. Mirrors must behave as **structural visual nodes**, not random sparkle. They should punctuate, anchor, and activate the field. They must feel stitched into the surface and integrated into the design rhythm.

Use real stitch logic. Edges must feel **fastened, bordered, reinforced, and hand-resolved**. Shapes should feel held together by labor. Do not use soft dissolving borders or graphic-print edges.

Use real space logic. The world must still feel **surface-born**, even if it grows rich and layered. Space should emerge from field segmentation, surface density, border hierarchy, and reflective accents, not from realism-first perspective.

Use real identity logic. Keep the result rooted in **Sandur Lambani** community-coded textile order, not anonymous tribal fashion or boho styling.

Do not make it generic mirror embroidery.

Do not make it a printed textile with mirrors added.

Do not make it fashion-first.

Do not make it realism-first costume design.

Do not let any major element belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** in the authentic visual logic of **traditional Sandur Lambani Embroidery from Karnataka**.

Treat the style as:

a constructed textile-surface system,
a Lambani community-coded ornament world,
a patchwork/appliqué/mirror grammar,
and a hand-built field language where surfaces are assembled through stitching, inserted mirrors, and attached decorative units.

Core style system to preserve:

- constructed cloth-field logic
- patchwork and appliqué memory
- mirror nodes as structural visual accents
- dense stitch-and-edge discipline
- segmented field order
- attached ornaments as surface architecture
- Sandur/Lambani identity grounding
- full-frame consistency so every visible element belongs to one Lambani world

Translate the image like this:

- **[MAIN SUBJECT / MAIN FORM]** becomes a Sandur Lambani-built form organized through segmented cloth fields, stitched joins, and mirror rhythm
- **[SECONDARY FORMS / SUPPORTING ELEMENTS]** also obey the same constructed textile logic
- **[BORDERS / PANELS / SURFACE ZONES / ORNAMENTAL AREAS]** become patch-and-stitch-built fields rather than printed design bands
- **[ENVIRONMENT / SUPPORT / CONTEXT]** must support the Lambani field world rather than pulling the frame into ordinary realism

Shape logic:

keep forms bounded, stitched, segmented, and field-defined rather than soft or realism-first

Surface logic:

keep patch addition, appliqué construction, mirror insertion, and stitched reinforcement visibly active

Light/value logic:

let mirrors punctuate highlights and let field contrast organize readability rather than generic shading alone

Space logic:

keep the world textile-born, layered through field hierarchy and surface density rather than realism-first depth

Keep:

- built textile intelligence
- patch/appliqué structure
- mirror rhythm
- edge and seam logic
- Lambani identity
- Sandur grounding

Avoid:

- generic mirror work
- boho fashion styling
- printed pattern look
- smooth uninterrupted cloth fields
- costume-first realism
- one Lambani patch inside a non-Lambani world

Image-to-Image

Convert this source image into the authentic visual world of **traditional Sandur Lambani Embroidery from Karnataka**.

Preserve the source image's main subject count, object hierarchy, field order, and readability, but rebuild the entire image through **Lambani constructed-surface grammar**. Replace generic textile or costume behavior with **patchwork, appliqué, mirror insertion, dense stitching, and attached ornaments**. Replace smooth continuous surfaces with **segmented stitched fields**. Replace generic decorative sparkle with **stitched mirror nodes**.

If the source image contains garments, objects, panels, borders, or decorative zones, convert them so they feel like true Sandur Lambani-built surfaces. If the source image contains context or environment, reorganize it so the whole frame still behaves like a world generated by Lambani field logic rather than by normal realism.

Retain source-memory:

- constructed textile-surface logic
- patchwork/appliqué build
- mirror-node rhythm
- dense stitch boundaries
- attached ornament
- Sandur/Lambani identity

Do not turn it into generic mirror fashion.
Do not turn it into print plus embellishment.
Do not recolor a normal world and call it Lambani.
Do not let mirrors become decorative sparkle only.
Do not let the frame stop behaving like a Sandur Lambani world.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D image-world** rooted in the authentic logic of **traditional Sandur Lambani Embroidery from Karnataka**. This version must remain source-rooted but may expand beyond literal textile documentation into a richer visual system built from **patchwork field construction, appliqué logic, mirror-node rhythm, dense stitch structure, attached ornaments, and Lambani identity-based surface intelligence**.

The world must still feel generated from **Lambani embroidery grammar**, not from generic colorful folk fantasy. Keep the cloth-field construction active. Keep mirrors structural. Keep stitches as the force that defines edges, joins, segmentation, and rhythm. Let the whole frame begin to reorganize through **surface-built logic**, not through realism-first modeling.

Use real whole-world translation logic. The style must transform not only material but also:

- how forms are segmented
- how contours are reinforced
- how silhouettes are broken into fields
- how light is punctuated by mirrors
- how value is grouped through patch contrast
- how space is layered through surface logic
- how the environment inherits stitched and attached order

Allow the image to become richer, more layered, and more spatially suggestive than a literal garment study, but keep every visible form **Sandur Lambani-born**.

Do not make it generic bright textile fantasy.
Do not make it fashion illustration.
Do not let patch/appliqué logic disappear.
Do not let mirrors become decoration only.
Do not let the style survive only as color and sparkle.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **creative 2D + 3D translation** rooted in authentic **Sandur Lambani Embroidery from Karnataka**.

Treat the style as:

a constructed cloth-field world,
a Lambani identity-coded surface system,
a patch/appliqué/mirror grammar,
and a hand-built ornament language that can expand into a broader image-space without losing its textile truth.

Preserve these style-core rules:

- constructed textile logic remains primary
- patch and appliqué remain structurally active
- mirrors remain field-defining nodes
- stitches remain boundary and rhythm engines
- attached ornaments remain part of the surface architecture
- full-frame coherence remains inside one Lambani world

Translate the image like this:

- **[MAIN SUBJECT]** becomes a Sandur Lambani-derived form organized through segmented patch fields, stitched boundaries, and mirror rhythm
- **[SECONDARY SUBJECTS]** also obey the same built textile logic
- **[BORDERS / SURFACE PANELS / ORNAMENTAL ZONES]** become richer field structures built through appliqué and attachment rather than through graphic patterning
- **[ENVIRONMENT / CONTEXT / SUPPORT]** becomes a broader but still Lambani-governed world rather than generic realism

Let these become richer:

- field layering
- patch hierarchy
- mirror-node placement
- seam and edge rhythm
- attached ornament density
- controlled 2D + 3D expansion
- full-frame Lambani coherence

Keep unchanged:

- built textile intelligence
- mirror structure
- stitched segmentation
- Lambani identity
- Sandur grounding

- surface-born space logic

Avoid:

- generic mirror fashion
- boho textile fantasy
- printed ethnic pattern logic
- realism-first environment
- decorative sparkle replacing mirror structure
- any major element leaving the Lambani system

Image-to-Image

Convert this source image into a **creative 2D + 3D Sandur Lambani translation** from Karnataka.

Preserve the source image's main subject count, compositional hierarchy, field order, and readability, but reconstruct all visible elements through **constructed cloth-field grammar**. Let the image become richer and more layered than a literal embroidery study, but keep it fully rooted in **patchwork, appliqué, mirror insertion, dense stitching, attached ornaments, and community-coded textile order**.

If the source image contains garments, objects, borders, panels, architecture-like divisions, or environmental zones, convert them so they feel built through Lambani surface intelligence rather than decorated afterward. If the source image contains surrounding space, reorganize it so the full frame feels generated by a coherent Sandur Lambani field world.

Retain:

- patch/appliqué construction memory
- mirror-node rhythm
- dense stitch logic
- attached ornament architecture
- Lambani identity
- Sandur regional grounding

Allow:

- richer layering
- broader field-world expansion
- stronger 2D + 3D articulation
- more integrated surface-environment coherence

Do not simply add mirrors to a normal scene.

Do not make it generic mirror-work fantasy.

Do not let realism dominate textile-field logic.

Do not lose the memory of built cloth construction.
Do not let the frame stop behaving like Lambani embroidery.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from the authentic grammar of **traditional Sandur Lambani Embroidery from Karnataka**. The image must feel believable, spatial, and materially convincing, but its realism must remain fully controlled by **constructed cloth-field logic, patchwork/appliqué structure, mirror-node rhythm, dense stitch hierarchy, attached ornament physics, and Lambani identity-based world order**.

Build the world from inside the craft system: the surface must still feel built, not merely decorated; mirrors must still function as structural reflective nodes; stitches must still govern joins, edges, and rhythm; and the whole frame must still feel generated by **Lambani textile intelligence** rather than by ordinary realism.

Material logic is critical. The world must still remember layered cloth, attached pieces, mirror units, shells/beads/coins/tassels/metal accents, and hand-secured seams. Do not turn Lambani into printed-fabric realism or high-fashion embellishment.

Shape and space logic are critical. Forms must remain **segmented, field-structured, and stitch-governed** even as the world gains dimensionality. Space must grow from surface logic, not replace it. Environment, supports, and grouped elements must all feel like extensions of Lambani textile construction.

Light and value logic are critical. Lighting must strengthen **mirror punctuations, field contrast, and stitched boundary readability**, not dissolve them into generic cinematic realism.

Do not make it a realistic world with Lambani embroidery only on clothing or props.

Do not make it fashion-shoot realism.

Do not let mirrors become generic sparkle.

Do not let printed-fabric logic replace built textile logic.

Do not allow any major element to belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **full 3D realistic dimensional world** generated from authentic **Sandur Lambani Embroidery from Karnataka**.

Treat the style as:

a constructed cloth-field world,
a Lambani community-coded surface system,
a patch/appliqué/mirror language,
and a believable reality whose shape, volume, light, and space are still controlled by
hand-built textile intelligence.

Style system that must remain unchanged:

- constructed textile-surface logic
- patch and appliqué memory
- mirrors as structural reflective nodes
- dense stitch-and-edge discipline
- attached ornament architecture
- Lambani identity grounding
- Sandur regional lock
- full-frame coherence inside one Lambani world

Translate the scene like this:

- **[MAIN SUBJECT]** becomes a fully dimensional Sandur Lambani-derived form structured by segmented cloth fields, stitched joins, and mirror rhythm
- **[SECONDARY SUBJECTS]** become dimensional but still obey the same built textile logic
- **[BORDERS / PANELS / SURFACES / SUPPORTS]** become tactile Lambani-world elements
- **[ENVIRONMENT]** becomes a believable spatial field organized by patch hierarchy, mirror punctuation, seam intelligence, and attached ornament order

Increase:

- believable volume
- tactile depth of layered cloth
- reflective mirror punctuation
- spatial completion
- environmental coherence
- full-frame Lambani integration

Do not lose:

- constructed-surface memory
- patch/appliqué logic
- mirror-node structure
- stitch boundary intelligence
- Lambani identity
- Sandur grounding

Avoid:

- generic ethnic textile realism
- print-based fabric logic
- fashion-first styling
- sparkle replacing mirrors
- realism overpowering textile-world order
- any non-Lambani system taking over the frame

Image-to-Image

Convert this source image into a **full 3D realistic Sandur Lambani world** from Karnataka.

Preserve the source image's main subject count, object hierarchy, compositional structure, and readability, but rebuild the entire image through **constructed textile-surface grammar**. Convert ordinary materials into **layered cloth fields with appliqué, patch additions, mirrors, dense stitching, and attached ornaments**. Convert ordinary surface design into **stitched field organization**. Convert generic spatial logic into a dimensional world still controlled by Lambani textile-world physics.

If the source image contains garments, objects, borders, supports, architectural divisions, or grouped forms, transform them into Lambani-derived structures that still feel built through patch/appliqué/mirror logic. If the source image includes surrounding space or environment, rebuild it so the full frame feels born from a coherent Sandur Lambani world rather than from normal realism.

Retain:

- constructed cloth-field memory
- patch/appliqué logic
- mirror-node rhythm
- dense stitch hierarchy
- attached ornament architecture
- Lambani identity
- Sandur grounding

Increase:

- dimensional realism
- tactile surface depth
- spatial completion
- full-frame field coherence
- Lambani-world integration

Do not paste Lambani embroidery over a normal scene.

Do not turn it into generic mirror-fashion realism.

Do not let realism erase patch-and-stitch construction memory.

Do not let the environment overpower the textile-world logic.

Do not allow one major element to remain outside the Sandur Lambani system.
