

Mashru Weaving - Gujarat

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of Mashru weaving from Gujarat as a mixed silk-cotton warp-faced satin textile.

Treat this as a woven cloth system with silk on the outer face and cotton on the inner face, not as generic satin, not as printed striped fabric, not as plain silk luxury cloth, and not as synthetic glossy fashion material.

Build the entire image as if it is generated from real Mashru weaving intelligence:

warp-faced satin structure,
lustrous silk outer surface,
cotton-backed inner logic,
woven line and stripe order,
vibrant woven color,
smooth but textile-authentic sheen,
garment-rooted cloth behavior,
and a surface that feels woven rather than printed.

The outer face must feel silk-rich and glossy, but not fake or plastic.

The cloth must still feel body-near and wearable, not upholstery-first.

The stripes, lines, or dotted-line structures must feel woven into the fabric, not applied later.

If humans, animals, trees, props, objects, architecture, ground, or environment are present, rebuild all of them through Mashru weave intelligence so the whole frame feels born from warp-led surface rhythm, silk sheen over cotton comfort, and line-led woven order, not like a normal scene with one shiny striped garment inserted later.

Human skin and faces must remain clean and readable.

The style must enter through woven line rhythm, satin-surface structure, mixed-fiber contrast, garment logic, and cloth-led organization across the whole image.

Avoid:

generic satin fabric,
printed stripes,
synthetic shine,
plain silk glamour,
fashion-editorial satin styling,
one Mashru patch inside an unrelated world,
surface-only glossy decoration.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in the authentic visual logic of Mashru weaving from Gujarat.

Treat the style as a mixed silk-cotton warp-faced satin weave, not as generic shiny striped cloth.

Core style lock:

silk outside,
cotton inside,
warp-faced satin structure,
woven line and stripe rhythm,
textile-authentic sheen,
garment-near cloth intelligence,
whole-frame Mashru consistency.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a Mashru-built woven presence with a silk-rich outer face and woven line-led surface order.

[HUMANS] are rebuilt through garment-field rhythm, satin-woven segmentation, and line-led cloth logic; skin stays clean and human.

[ANIMALS] are rebuilt through woven stripe or line logic, satin-surface grouping, and Mashru cloth rhythm rather than generic realism.

[TREES / FOLIAGE] are rebuilt through line-led woven clustering, banded surface order, and satin-like textile grouping rather than natural leaf realism.

[OBJECTS / GROUND / ARCHITECTURE] inherit warp-led sheen, woven stripe rhythm, and mixed-fiber cloth intelligence.

[ENVIRONMENT] becomes a Mashru woven world rather than generic realism.

Keep:

warp-faced satin logic,
silk-outside/cotton-inside memory,
woven-not-printed line order,
garment-rooted use,
textile-authentic sheen.

Avoid:

generic satin,
printed stripes,
synthetic shine,
plain silk luxury cloth,
one correct garment inside an unrelated image.

Image-to-Image

Convert this source image into the authentic visual world of Mashru weaving from Gujarat.

Preserve the source image's main subject relationships, action, and readability, but rebuild the entire image through Mashru warp-faced weaving grammar.

Replace ordinary surfaces with woven satin behavior.

Replace generic shine with silk-rich warp-faced sheen.

Replace printed-looking lines with woven line and stripe order.

Replace plain luxury fabric logic with the structural idea of silk outside and cotton inside.

If the source contains people, animals, trees, props, objects, ground, or environment, convert all of them so they feel generated by Mashru weave intelligence instead of remaining normal realism.

Do not simply add shiny stripes to clothing.

Do not leave the environment generic.

Do not make it look like synthetic satin or printed fabric.

The final image must feel like a real Mashru woven system expanded across the whole frame.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image translation rooted in Mashru weaving from Gujarat.

This is not generic satin cloth and not a full realistic world yet.

It must remain source-rooted in Mashru grammar:

warp-faced satin weave,

silk on the outside,

cotton on the inside,

woven line and stripe order,

vibrant woven color,

garment-near cloth logic.

Let the image gain dimensional body, layered woven-field depth, richer satin-surface tactility, stronger stripe rhythm, and more visible relation between sheen and line structure.

But keep the image weave-field-first.

It should still feel like Mashru weaving intelligence is constructing the image, not generic realism.

Extend Mashru across all elements:

humans are shaped through garment-field rhythm, satin-woven segmentation, line-led grouping, and mixed-fiber cloth logic;

animals are shaped through woven banding, line-led body order, and satin-surface pattern rhythm;

trees are shaped through banded woven clustering and stripe-led textile masses;
props, ground, and architecture are shaped through warp-led sheen, line order, and
cloth-built rhythm.

Faces and skin stay readable and human.

No synthetic gloss.

No printed stripes.

No generic fashion satin.

Avoid:

generic luxury satin,

printed stripe graphics,

plastic shine,

plain silk glamour,

surface decoration added afterward,

normal realism with one Mashru textile inserted.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a creative 2D + 3D translation rooted in Mashru weaving from Gujarat.

Preserve these source-core rules:

warp-faced satin remains primary,

silk-outside/cotton-inside logic remains structural,

woven line rhythm remains active,

textile-authentic sheen remains visible,

garment-rooted cloth intelligence remains present,

the whole frame remains inside one Mashru system.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a dimensionalized Mashru woven-image zone.

[HUMANS] are rebuilt through satin-woven garment order, line-led segmentation, and mixed-fiber cloth logic; skin remains clean.

[ANIMALS] are rebuilt through woven stripe rhythm and satin-surface grouping.

[TREES / FOLIAGE] are rebuilt through line-led banding, woven clustering, and textile-like mass order.

[OBJECTS / GROUND / ARCHITECTURE] gain richer layering but remain governed by warp-led sheen and woven stripe order.

[ENVIRONMENT] becomes a Mashru image-field rather than generic realism.

Let these become richer:

woven-field depth,

stripe continuity,

silk-surface glow,

textile tactility,

image-body.

Keep unchanged:

warp-faced logic,
silk outside / cotton inside memory,
woven-not-printed order,
garment-near use,
Mashru branch purity.

Avoid:

generic satin styling,
printed pattern look,
synthetic shine,
plain silk luxury,
one Mashru section inside an unrelated image.

Image-to-Image

Convert this source image into a creative 2D + 3D Mashru translation from Gujarat.

Preserve the source image's main action, subject count, and readability, but reconstruct the full image through Mashru warp-faced weaving grammar.

Replace ordinary surfaces with woven satin behavior.
Replace decorative shine with silk-rich warp-led sheen.
Replace generic lines with woven stripe order.
Replace plain glossy cloth with mixed-fiber garment logic.

Allow the image to gain layered woven depth, richer textile tactility, stronger stripe rhythm, and more visible image-body.
But do not let it become full realism.
It must still behave like a dimensionalized Mashru woven field.

Do not paste stripes onto a normal image.
Do not leave humans, trees, animals, or environment generic.
Do not turn it into fashion-editorial satin styling.

The result must feel like Mashru weave logic has gained image-body across the whole frame.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D realistic dimensional world generated from Mashru weaving of Gujarat.

The realism must remain fully governed by Mashru weaving grammar, not by generic realism.

Build the whole world through:

warp-faced satin structure,
silk on the outer face,
cotton on the inner face,
woven line and stripe order,
vibrant woven color,
garment-near cloth intelligence,
and textile-authentic sheen.

The world must feel as if Mashru weaving intelligence has become a complete dimensional reality.

Figures, clothing, objects, architecture, surfaces, environment, and spatial divisions must all belong to one Mashru system.

The sheen must still feel woven, not synthetic.

The lines must still feel woven, not printed.

The cloth must still feel body-aware and structurally mixed-fiber.

Humans must be rebuilt through satin-woven garment rhythm, line-led cloth order, and mixed-fiber logic while skin remains clean and human.

Animals must be rebuilt through woven stripe/band logic and satin-surface grouping.

Trees must be rebuilt through line-led textile massing and woven clustering.

Ground, props, and architecture must all inherit Mashru surface intelligence.

Make the space fully volumetric and believable, but do not let realism erase the weave-first origin.

This is not normal realism with one shiny striped textile.

This is Mashru grammar becoming world structure.

Avoid:

generic premium satin realism,
printed stripes,
synthetic gloss,
plain silk luxury styling,
surface-only decoration,
one Mashru garment inside a non-Mashru world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a full 3D realistic dimensional world generated from Mashru weaving of Gujarat.

Style system that must remain unchanged:

warp-faced satin remains primary,
silk-outside/cotton-inside logic remains structural,
woven line-led order remains active,
textile-authentic sheen remains visible,
garment-near cloth intelligence remains present,
whole-frame Mashru consistency remains intact.

Translate the world like this:

[MAIN SUBJECT / MAIN FIELD] becomes a fully dimensional Mashru-governed woven presence.

[HUMANS] become volumetric but remain organized through satin-woven garment rhythm, line-led cloth grouping, and mixed-fiber surface logic.

[ANIMALS] become volumetric but remain shaped by woven stripe order and satin-surface patterning.

[TREES / FOLIAGE] become volumetric but remain organized through banded woven clustering and line-led textile massing.

[OBJECTS / GROUND / ARCHITECTURE] continue to structure the world through warp-led sheen and woven line order.

[ENVIRONMENT] becomes a believable spatial field organized by Mashru intelligence rather than generic realism.

Increase:

full spatial depth,
material presence,
woven tactility,
stripe continuity,
surface glow,
world completion.

Do not lose:

warp-faced logic,
silk outside / cotton inside memory,
woven-not-printed order,
garment-rooted practicality,
Mashru world-logic.

Avoid:

generic realistic satin,
printed stripe realism,
synthetic shine,
plain silk luxury,
Mashru as accent instead of world structure.

Image-to-Image

Convert this source image into a full 3D realistic Mashru world from Gujarat.

Preserve the source image's main composition, subject relationships, and readability, but rebuild the whole image through Mashru woven-world grammar.

Replace normal realism with a world governed by warp-faced satin structure, silk-rich outer sheen, cotton-backed inner logic, woven line/stripe order, and garment-rooted cloth intelligence.

If the source contains figures, garments, props, objects, architecture, animals, trees, ground, or environment, convert all of them so they behave as if generated from Mashru weaving intelligence.

Keep the sheen woven and structurally plausible.

Keep the lines woven, not printed.

Keep the whole frame organized by warp-led textile order rather than generic realistic arrangement.

Do not simply apply shiny stripes over the image.

Do not leave secondary forms generic.

Do not turn it into generic satin realism.

The final result must feel like Mashru itself generated the world.
