

Moirang Phee - Manipur

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of **traditional Moirang Phee from Manipur**. Build the image as if it comes from a real **Meitei handwoven textile world** originating in **Moirang**, where the defining identity is the **Moirang Pheejin** motif woven along the border through the **extra-weft technique**. The image must read first as **Moirang Phee**, not as generic Manipuri weaving, not as a geometric border fabric, not as embroidered border cloth, not as printed ethnic textile, and not as fashion fabric with a traditional trim added later.

Use real weave logic. The motif must feel **woven into the cloth structure**, not painted, printed, appliquéd, embroidered, or pasted on afterward. The border must feel loom-built and structurally integrated into the textile body. The world must preserve the sense that one shuttle handles the main field and another handles the motif field, so the border and body feel related but distinct.

Use real whole-world translation logic. Do not only change border pattern, cloth texture, or color. Rebuild **shape logic, field hierarchy, edge behavior, value grouping, garment logic, space organization, and textile-world physics** through Moirang Phee grammar. The whole image must feel generated by **woven border intelligence**, not by ordinary garment realism.

Use real motif logic. The **Moirang Pheejin** must remain the main identity-bearing sign. Preserve its **odd-step triangular discipline** and its symbolic link to the **pronged teeth of Pakhangba**. The motif should not feel like generic triangles. It must feel like a culturally coded woven border-form.

Use real border logic. The border must remain the **main structuring zone**. The body field should support it, not compete with it. Do not spread the motif everywhere like an all-over print. Preserve the tension between border order and body restraint.

Use real garment logic. The cloth must still feel like it belongs to **innaphee / phanek / related Meitei garment culture**, not like abstract fabric design.

Do not make it generic handloom border cloth.

Do not make it printed geometry.

Do not make it embroidery-like decoration.

Do not make it fashion-first textile design.

Do not let any major element belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / TEXTILE WORLD]** in the authentic visual logic of **traditional Moirang Phee from Manipur**.

Treat the style as:

a Meitei woven border-identity textile,
a Moirang-origin motif system,
an extra-weft border-formation language,
and a garment-linked cloth world where the **Moirang Pheejin** motif structurally defines the textile.

Core style system to preserve:

- Moirang Pheejin motif identity
- extra-weft woven construction memory
- body-versus-border hierarchy
- odd-step triangular motif discipline
- border as the main identity-bearing zone
- Pakhangba-linked symbolic origin
- Meitei garment-world grounding
- full-frame consistency so every visible element belongs to one Moirang Phee world

Translate the image like this:

- **[MAIN SUBJECT / MAIN FORM]** becomes a Moirang Phee-derived woven field structured by border identity and extra-weft motif logic
- **[SECONDARY FORMS / SUPPORTING ELEMENTS]** also obey the same woven border/body relationship
- **[BORDERS / EDGE ZONES / LENGTHWISE STRUCTURES]** become Moirang Pheejin-governed identity fields
- **[BODY FIELD / GARMENT FIELD / CONTEXT]** must support the woven border logic rather than compete with or erase it

Shape logic:

keep forms ordered through stepped border geometry and woven field separation rather than free decorative patterning

Field logic:

keep border dominant, body restrained, and transitions loom-born rather than graphic-overlay-like

Value and space logic:

keep the world textile-structured, with woven hierarchy stronger than realism-first depth

Meaning logic:

keep Moirang, Meitei, and Pakhangba-linked symbolic identity stronger than decorative styling

Keep:

- woven motif truth
- border identity
- step-discipline
- garment memory
- Meitei textile dignity
- Moirang origin logic

Avoid:

- generic handloom styling
- print-like border behavior
- embroidery-like surface decoration
- fashion trim logic
- all-over geometric spread
- one Moirang border inside a non-Moirang world

Image-to-Image

Convert this source image into the authentic visual world of **traditional Moirang Phee from Manipur**.

Preserve the source image's main subject count, object hierarchy, garment order, and compositional readability, but rebuild the entire image through **Moirang Phee woven border grammar**. Replace generic cloth behavior with **extra-weft structural motif logic**. Replace ordinary border decoration with **Moirang Pheejin identity**. Replace generic field organization with **body-versus-border textile hierarchy**. Replace decorative triangles with a true **odd-step woven motif system**.

If the source image contains garments, draped cloth, edges, panels, or textile zones, convert them so they feel like real Moirang Phee structures rather than standard fabrics with a traditional border added. If the source image contains surrounding context, keep it subordinate to the woven garment-world so the full frame still behaves like a textile identity system and not like ordinary fashion realism.

Retain source-memory:

- Moirang Pheejin motif identity
- extra-weft woven logic
- border dominance
- stepped triangular discipline
- Pakhangba-linked symbolic reading
- Meitei garment-world grounding

Do not turn it into generic Manipuri handloom.
Do not turn it into print-based geometry.
Do not simply add a border to normal cloth.
Do not let the motif lose woven structural authority.
Do not let the frame stop behaving like Moirang Phee.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D image-world** rooted in the authentic logic of **traditional Moirang Phee from Manipur**. This version must remain source-rooted but may expand beyond literal textile documentation into a richer visual system built from **Moirang Pheejin border identity, extra-weft woven structure, odd-step triangular rhythm, body-versus-border hierarchy, and Meitei garment intelligence**.

The world must still feel generated from **Moirang Phee weave grammar**, not from generic textile fantasy. Keep the border structurally dominant. Keep the motif woven, not applied. Let shape, edge, hierarchy, spacing, and field transitions all begin to reorganize through **woven border intelligence** rather than realism-first fabric styling.

Use real whole-world translation logic. The style must transform not only motif appearance but also:

- how forms are segmented
- how edges are disciplined
- how garment fields are organized
- how values separate border and body
- how space grows from textile order
- how the world inherits loom-built structure
- how symbolic identity remains active inside expansion

Allow the image to become richer and more layered than a literal cloth study, but keep every visible form **Moirang Phee-born**.

Do not make it generic handloom fantasy.
Do not make it border-decoration styling.
Do not let extra-weft logic disappear.
Do not let the motif become generic stepped triangles.
Do not let the style survive only as a woven trim.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **creative 2D + 3D translation** rooted in authentic **Moirang Phee from Manipur**.

Treat the style as:

a Meitei woven border-identity system,
a Moirang-origin motif world,
an extra-weft border-formation language,
and a garment-linked textile logic that can expand into a broader image-space without losing woven truth.

Preserve these style-core rules:

- Moirang Pheejin remains the main identity sign
- extra-weft construction remains active
- border/body hierarchy remains structural
- odd-step triangular order remains disciplined
- Pakhangba-linked symbolic memory remains present
- full-frame coherence remains inside one Moirang Phee world

Translate the image like this:

- **[MAIN SUBJECT]** becomes a Moirang Phee-derived woven field or form organized by border identity and step-motif logic
- **[SECONDARY SUBJECTS]** also obey the same border/body structure
- **[BORDERS / EDGE FIELDS / DIVISION ZONES]** become richer Moirang Pheejin-driven identity fields
- **[BODY FIELD / GARMENT / ENVIRONMENT]** becomes a broader but still Moirang-governed textile world rather than generic realism

Let these become richer:

- field layering
- border-to-body relation
- woven edge discipline
- symbolic motif rhythm
- garment-world hierarchy
- controlled 2D + 3D expansion
- full-frame Moirang coherence

Keep unchanged:

- woven motif truth
- border dominance
- extra-weft memory
- odd-step order
- Meitei garment identity
- Moirang symbolic grounding

Avoid:

- generic woven fantasy
- print-based border design
- embroidery-like motif behavior
- fashion-first textile art
- border as mere trim
- any major element leaving the Moirang Phee system

Image-to-Image

Convert this source image into a **creative 2D + 3D Moirang Phee translation** from Manipur.

Preserve the source image's main subject count, field order, garment hierarchy, and readability, but reconstruct all visible elements through **Moirang Phee woven border grammar**. Let the image become richer and more layered than a literal garment study, but keep it fully rooted in **Moirang Pheejin motif authority, extra-weft structure, border/body hierarchy, stepped motif discipline, and Meitei woven identity**.

If the source image contains garments, textile panels, drapes, borders, or structured edges, convert them so they feel like true Moirang Phee textile formations rather than generic fabrics with traditional styling. If the source image includes surrounding space or context, reorganize it so the full frame feels generated by coherent woven border intelligence rather than by normal realism.

Retain:

- Moirang Pheejin identity
- extra-weft woven memory
- border/body hierarchy
- odd-step triangular order
- Pakhangba-linked symbolic reading
- Meitei garment-world identity

Allow:

- richer layering
- broader woven field-world expansion
- stronger border-led organization
- controlled 2D + 3D articulation

Do not simply add a triangle border to normal cloth.

Do not make it generic Manipuri textile fantasy.

Do not let realism dominate woven border logic.

Do not lose the motif's structural authority.

Do not let the frame stop behaving like Moirang Phee.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from the authentic grammar of **traditional Moirang Phee from Manipur**. The image must feel believable, spatial, and materially convincing, but its realism must remain fully controlled by **Moirang Pheejin motif identity, extra-weft woven structure, odd-step triangular discipline, border/body hierarchy, and Meitei garment-linked textile logic**.

Build the world from inside the craft system: the motif must still feel woven, not added; the border must still act as the main identity-bearing zone; the body field must still support border authority; and the whole frame must still feel generated by **Moirang Phee weaving intelligence** rather than by ordinary garment realism.

Material logic is critical. The world must still remember **handwoven cloth**, not print-based fashion fabric. Do not turn Moirang Phee into generic handloom luxury or border-styled contemporary cloth.

Shape and space logic are critical. Forms must remain **border-ordered, step-disciplined, and field-structured** even as the world gains dimensionality. Space must grow from woven hierarchy, not replace it. Environment, supports, folds, and garment behavior must all feel like extensions of Moirang Phee textile-world intelligence.

Light and value logic are critical. Lighting must strengthen **woven border readability, body-versus-border separation, and motif hierarchy**, not dissolve them into generic garment realism.

Do not make it a realistic fashion world with Moirang edging.

Do not make it print-like woven realism.

Do not let the border become decorative trim only.

Do not let extra-weft memory disappear into surface styling.

Do not allow any major element to belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **full 3D realistic dimensional world** generated from authentic **Moirang Phee from Manipur**.

Treat the style as:

a Meitei woven border-identity textile,

a Moirang-origin motif system,

an extra-weft structural language,
and a believable reality whose shape, volume, light, and space are still controlled by
border-led weave intelligence.

Style system that must remain unchanged:

- Moirang Pheejin motif identity
- extra-weft woven construction
- border/body hierarchy
- odd-step triangular order
- Pakhangba-linked symbolic grounding
- Meitei garment-world identity
- full-frame coherence inside one Moirang Phee world

Translate the scene like this:

- **[MAIN SUBJECT]** becomes a fully dimensional Moirang Phee-derived woven field or form structured by border identity and motif-step logic
- **[SECONDARY SUBJECTS]** become dimensional but still obey the same border/body order
- **[BORDERS / EDGES / FIELD DIVISIONS / SUPPORTS]** become tactile Moirang-world elements
- **[ENVIRONMENT]** becomes a believable spatial field organized by woven hierarchy, border emphasis, and garment-linked textile order

Increase:

- believable textile volume
- woven material depth
- spatial completion
- border/body coherence
- full-frame Moirang integration

Do not lose:

- woven motif truth
- extra-weft memory
- border dominance
- step discipline
- symbolic grounding
- Meitei garment identity

Avoid:

- generic handloom realism
- print-like border behavior
- fashion-first styling
- border trim replacing structural identity
- realism overpowering woven field logic

- any non-Moirang system taking over the frame

Image-to-Image

Convert this source image into a **full 3D realistic Moirang Phee world** from Manipur.

Preserve the source image's main subject count, field hierarchy, garment order, and readability, but rebuild the entire image through **Moirang Phee woven border grammar**. Convert ordinary cloth into **extra-weft structured textile fields**. Convert generic border behavior into **Moirang Pheejin identity logic**. Convert surface decoration into **woven field hierarchy**. Convert normal garment realism into a dimensional world still controlled by **border/body structure, step-motif order, and Meitei textile-world intelligence**.

If the source image contains garments, edges, drapes, textile zones, or body-linked fabric fields, transform them into Moirang Phee-derived structures that still feel governed by real woven construction. If the source image includes surrounding space or environment, rebuild it so the full frame feels born from a coherent Moirang Phee world rather than from ordinary realism.

Retain:

- Moirang Pheejin motif identity
- extra-weft woven memory
- border/body hierarchy
- odd-step triangular discipline
- Pakhangba-linked symbolic reading
- Meitei garment-world grounding

Increase:

- dimensional realism
- woven material depth
- spatial completion
- garment-world coherence
- full-frame Moirang integration

Do not paste a Moirang-style border onto normal cloth.

Do not turn it into generic Manipuri handloom realism.

Do not let realism erase woven border logic.

Do not let the border lose structural authority.

Do not allow one major element to remain outside the Moirang Phee system.
