

Phulkari - Punjab

but only if we force it beyond embroidery-on-cloth and into full image logic

V1 — Authentic Style

Universal Hard Prompt

Create an image in the pure authentic source-truth visual logic of Phulkari from Punjab.

Treat this as a counted-thread embroidery and textile-field system, not as generic Punjabi fashion decoration, not as printed floral pattern, not as boutique ethnic surface styling, and not as a realistic scene with embroidered clothing added later.

Build the whole image as if it comes from real Phulkari intelligence:

handwoven khaddar ground,
reverse-side counted darn-stitch construction,
silk-floss luminosity over matte cloth,
motif-through-construction rather than motif pasted later,
field planning,
density control,
ceremonial and domestic memory,
and textile-first image logic.

The style must control the entire frame:

faces,
bodies,
silhouettes,
posture,
figure grouping,
objects,
environment,
surface ordering,
spacing,
and field distribution.

If figures appear, do not build them as normal realistic people.

Build them as textile-born presences:

stitch-readable forms,
simplified and structurally clear facial logic,
embroidery-compatible body logic,
motif-aware drapery behavior,
clean silhouette grouping,
and forms that feel generated by counted stitch and cloth planning.

Space must not behave like ordinary perspective realism.

The image should feel field-organized, cloth-aware, repetition-aware, and surface-ordered.

Near and far readability should both matter:

from distance it should read as luminous textile-field intelligence,

and from close view it should reveal counted stitch rhythm, directional thread build, and khaddar-floss relationship.

Preserve Phulkari's true identity:

textile-first,

stitch-built,

cloth-grid-aware,

ceremonial,

domestic-memory-bearing,

Punjab-rooted.

Do not make it:

printed,

wallpaper-like,

generic floral embroidery,

machine-perfect commercial phulkari fashion,

generic "Punjabi traditional" styling,

photoreal humans wearing embroidered fabric,

or ordinary realism with decorative borders and shawls.

The final image must feel like the source tradition itself made it.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in the pure authentic source-truth visual logic of Phulkari from Punjab.

Treat the style as a counted-thread textile system built from:

handwoven khaddar ground,

reverse-side darn-stitch logic,

silk-floss luminosity,

field-and-motif planning,

cloth-first visual order,

and ceremonial domestic memory.

Core style system to preserve:

textile-first identity,

counted stitch structure,

cloth-field behavior,

motif-through-construction,

stitch density and spacing logic,

floss over ground relationship,
Punjab-rooted domestic-ceremonial textile intelligence,
whole-frame consistency.

Translate the image like this:

[MAIN FIGURES] must become textile-born stitched presences, not normal realistic anatomy

[FACES] must become embroidery-readable, simplified, structurally clear, non-photoreal

[BODIES / DRAPERY] must obey stitch rhythm, field order, and cloth-born pattern logic

[OBJECTS / PROPS] must feel generated through embroidery planning, not added as normal realism

[ENVIRONMENT / BACKGROUND] must also inherit cloth-field order, repetition logic, and stitch-aware organization

Keep:

counted construction,

textile memory,

field intelligence,

motif density control,

stitch-built identity,

cloth-ground presence.

Avoid:

generic Punjabi wedding styling,

print-like repetition,

fashion-catalog embroidery,

generic ethnic surface decoration,

realistic scene with embroidered garments only,

machine-perfect ornament,

wallpaper geometry,

or one styled textile inside an unstylized world.

The final result must feel like true Phulkari itself generated the whole image.

Image-to-Image

Convert this source image into the pure authentic source-truth visual logic of Phulkari from Punjab.

Preserve the source image's subject count, main action, pose relationships, and basic readability,

but rebuild the entire image through real Phulkari textile intelligence.

Replace normal realism with:

khaddar-ground logic,

counted reverse-side darn-stitch structure,
silk-floss-over-cloth behavior,
motif-through-construction,
field-planned organization,
and embroidery-born figure, object, and environment logic.

Do not merely place phulkari embroidery onto clothing.

Do not merely add floral motifs or bright Punjabi colors.

Do not turn the result into printed ethnic patterning.

Do not keep realistic faces, realistic space, and realistic background while only textiles change.

Rebuild:

faces as textile-readable forms,

bodies as stitch-compatible presences,

objects as embroidery-organized units,

environment as cloth-field world logic,

and the whole frame as one Phulkari-authored visual language.

The final result must feel like the source image has been completely re-authored by authentic Phulkari, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in V2 = authentic handcrafted dimensional translation of Phulkari from Punjab.

Preserve the same deep source grammar of Phulkari:

handwoven khaddar ground memory,

reverse-side counted darn-stitch logic,

silk-floss luminosity,

field planning,

motif-through-construction,

textile-first image order,

and domestic-ceremonial Punjab textile intelligence.

Now translate that same grammar into believable handcrafted dimensional form.

This must not become generic realism.

This must not become normal 3D cloth with embroidery added later.

This must not become a premium fashion image.

Dimensionality must come from Phulkari itself:

through cloth layering,

stitch-density hierarchy,

field separation,

motif grouping,

textile-body relation,

floss-versus-ground behavior,

and embroidery-authored spatial ordering.

Allow:

moderate dimensional presence,

tactile handcrafted objecthood,

clearer separation of foreground / middle / background,

thicker material presence,

embroidery-built surface depth,

and inhabitable but still textile-ruled image-space.

Figures must remain style-born:

faces must be embroidery-readable,

bodies must be textile-authored,

silhouettes must be stitch-built,

posture and grouping must feel structured by the style,

not by ordinary realism.

Objects and environment must also inherit embroidery logic.

Do not let only garments carry the style.

Do not let the environment become generic realism.

The whole image must feel like Phulkari has entered handcrafted dimensional space without losing its textile soul.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V2 = authentic handcrafted dimensional translation of Phulkari from Punjab.

Preserve the unchanged deep source core:

khaddar ground memory,
counted darn-stitch logic,
silk-floss luminosity,
cloth-field behavior,
motif-through-construction,
textile-first figure logic,
and ceremonial domestic memory.

Translate the image into handcrafted dimensional form by increasing:

volume,
objecthood,
material tactility,
field layering,
depth readability,
cloth-body relation,
and embroidery-structured environment logic.

Build the image like this:

[MAIN FIGURES] become textile-born dimensional presences, still governed by stitch and field logic

[FACES] remain simplified and embroidery-readable, never photoreal

[BODIES / DRAPERY] gain tactile thickness and handcrafted form, but still read as style-born

[OBJECTS / PROPS] gain dimensional body through textile logic, not realism-first modeling

[ENVIRONMENT / BACKGROUND] gains embroidery-authored structure, not generic perspective realism

Keep:

textile-first ontology,

stitch-built order,

field intelligence,

cloth-ground memory,

style-born characters,

style-born environment.

Avoid:

generic 3D realism,

normal humans in embroidered clothes,

realistic background with textile accents,

printed-look motifs,

boutique phulkari fashion feel,

machine-finished decorative prettiness,

Pixar / Disney / DreamWorks softness,

or depth built by realism instead of by textile logic.

The final image must feel like authentic Phulkari translated into handcrafted dimensional presence.

Image-to-Image

Convert this source image into V2 = authentic handcrafted dimensional translation of Phulkari from Punjab.

Keep the source image's subject count, core action, and readability,

but rebuild the entire image through Phulkari textile grammar translated into handcrafted dimensional form.

The image must no longer behave like normal realism.

Replace that with:

khaddar-ground memory,
counted stitch structure,
floss-over-cloth tactility,
field-based motif organization,
style-born figures,
and embroidery-authored objects and environment.

Add:

moderate dimensional presence,
tactile cloth and thread materiality,
clear field separation,
objecthood,
and handcrafted space logic.

But do not let dimensionality come from generic realism.

Do not keep realistic faces and bodies under decorated garments.

Do not build a normal 3D environment and then add phulkari motifs afterward.

Rebuild all visible elements so they feel born from textile logic.

The result must feel like the source image has entered Phulkari's handcrafted dimensional world, not that embroidery has been placed on top of an ordinary scene.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in V3 = fully resolved believable real-world 3D translation of the same source grammar of Phulkari from Punjab.

Preserve the same unchanged deep style-core:

khaddar ground memory,
counted reverse-side darn-stitch logic,
silk-floss luminosity,
cloth-field intelligence,
motif-through-construction,
textile-first figure design,
textile-first environment logic,
and Punjab-rooted domestic-ceremonial textile identity.

Now push that same grammar into its most believable, fully embodied real-world 3D scene.

Real-world here means:
believable volume,
believable material behavior,
believable object presence,
believable spatial separation,
believable scene completion,
and believable full-frame readability.

It does NOT mean:
generic realism,
cinematic makeover,
premium fashion tableau,
or realism with phulkari motifs added later.

The same style must still govern:
faces,
bodies,
silhouettes,
drapery,
figure grouping,
objects,
ground,
architecture,
vegetation,
and environment ordering.

Increase:
full volumetric embodiment,
material clarity,
figure-ground separation,
environmental completion,
attention control,
scene coherence,
and whole-frame readability.

But do not introduce a second visual language.
Do not let the environment become more realistic than the characters.
Do not let Phulkari survive only in garments, shawls, or decorative borders.
Do not make V3 a different premium style version.
It must remain the same Phulkari grammar, fully embodied.

The final image must feel like Phulkari itself has become a believable real-world 3D scene.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V3 = fully resolved believable real-world 3D translation of the same source grammar of Phulkari from Punjab.

Keep the same unchanged deep style-core:

khaddar ground memory,

counted stitch structure,

silk-floss luminosity,

field-and-motif planning,

textile-first figure logic,

cloth-first world logic,

and Punjab domestic-ceremonial textile intelligence.

Now fully embody that style into a believable 3D world.

Increase:

full volumetric depth,

material-light interaction,

object presence,

environment completion,

figure-ground separation,

focal clarity,

and whole-scene coherence.

Build the image like this:

[MAIN FIGURES] must be fully style-born and fully embodied, never generic realism wearing embroidery

[FACES] must remain source-born, textile-readable, and non-photoreal in their logic

[BODIES / DRAPERY] must feel fully real in space, but still governed by embroidery-born ordering

[OBJECTS / PROPS] must become fully present and believable through Phulkari logic, not realism-first modeling

[ENVIRONMENT / BACKGROUND] must become a complete world that still behaves like Phulkari authored it

Keep unchanged:

textile ontology,

stitch-built order,

cloth-field intelligence,

motif-through-construction,

style-born characters,

style-born environment,

single visual language across the frame.

Avoid:

generic cinematic illustration,

luxury Punjabi realism,

fashion-editorial finish,

ordinary realism with embroidery accents,

style only in garments,

style only in borders,

generic toon under textile motifs,

or any second visual language overpowering the source grammar.

The final image must feel like the same Phulkari system has become fully embodied reality.

Image-to-Image

Convert this source image into V3 = fully resolved believable real-world 3D translation of the same source grammar of Phulkari from Punjab.

Preserve the source image's subject count, core action, scene purpose, and main relationships,
but rebuild every visible element through Phulkari textile intelligence fully embodied as reality.

Replace ordinary realism with:
khaddar-ground memory,
counted stitch logic,
silk-floss surface life,
cloth-field organization,
motif-through-construction,
textile-born figure logic,
and embroidery-authored world ordering.

Expand the source into:
fully embodied figures,
believable material presence,
clear spatial separation,
full environmental completion,
strong object presence,
and coherent real-world scene depth.

But keep the same source grammar intact.
Do not let realism replace the style.
Do not add phulkari only to fabrics.
Do not let the background become generic realism.
Do not let V3 turn into a cinematic premium makeover.

Rebuild the entire frame so it feels like authentic Phulkari itself has become reality.
If the result feels like reality coated with phulkari, it has failed.
If it feels like Phulkari embodied as a whole world, it is correct.
