

Tribe-signature shawl branch - Naga...

V1 — Authentic Style

Universal Hard Prompt

Create an image built from the authentic tribe-signature shawl world of Nagaland. Do not treat this as generic Naga textile, generic red-black tribal geometry, or a normal world with “Naga-inspired” pattern added later. Build the entire image as if it is generated by one internally coherent tribe-specific shawl law where pattern order, band width, stripe rhythm, motif placement, contrast system, and body-cloth readability all belong to one single belonging system.

The image must obey this branch law:

- the world is generated from one tribe-specific woven code, not from mixed influence
- every band, stripe, block, motif, and field must belong to one internally coherent pattern order
- the cloth must feel like an identity system, not a decorative design exercise
- public readability of belonging must remain primary
- body-cloth relation must preserve the authority of one tribe-law
- no visual element may drift into another tribe’s incompatible code

Translate the full world through this tribe-signature system:

- shape must become rule-bound, coherent, and code-specific
- form must become identity-field form rather than generic textile form
- space must become tribe-coded field space rather than scenic space
- light must preserve pattern coherence and woven readability
- shadow must support field distinction without dissolving the code
- value must remain organized by one belonging law
- movement must preserve the readability of one internally coherent system
- environment must also obey one tribe-specific code: characters, animals, props, architecture, mountains, trees, ground, and background must all feel generated by one geometric law, not a mixed Nagaland collage

Keep the branch source-rooted:

one tribe-signature shawl law, handloom field discipline, public identity readability, code coherence, and whole-frame belonging order.

Avoid:

pan-Naga mashup, mixed stripe systems, red-black stereotype styling, “inspired by” tribal design, ordinary realism with one tribe-coded shawl inserted, and surface-only pattern borrowing.

The final result must feel like a true tribe-signature Naga shawl world: coherent, identity-bearing, woven, rule-bound, and fully translated across the whole frame.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of a tribe-signature Naga shawl world.

Core style system to preserve:

- one internally coherent tribe-specific code
- rule-bound band / stripe / block / motif order
- public belonging readability
- handloom-built pattern discipline
- body-cloth identity structure
- no mixed tribe logic
- whole-frame coherence under one tribe-law

Translate the scene like this:

- [MAIN SUBJECT] becomes governed by one internally coherent tribe-specific field code rather than generic realism
- [SECONDARY SUBJECTS] obey the same belonging law
- [OBJECTS / PROPS] become rule-bound forms generated by one woven identity system
- [ANIMALS / TREES / LANDSCAPE / ARCHITECTURE] become shaped by the same field-order law, without mixing outside systems
- [ENVIRONMENT / BACKGROUND] becomes a world of one coherent geometric code and public identity order
- [LIGHT / SHADOW] preserve coherence and woven readability rather than create unrelated mood
- [SPACE / DEPTH] become code-space and field-space rather than ordinary scenic depth
- [MOVEMENT / ACTION] preserve the visibility and coherence of one tribe-signature law

Keep:

single-system coherence, belonging readability, rule-bound field order, handloom identity, branch purity.

Avoid:

pan-Naga styling, mixed codes, “tribal inspired” design, stereotype geometry, ordinary realism with one coded shawl, and pattern borrowing without system discipline.

The final result must feel like the whole world was generated by one tribe-signature Naga shawl law.

Image-to-Image

Convert this source image into an authentic tribe-signature Naga shawl world.

Preserve the source image's subject count, core action, main relationships, and readable scene meaning, but rebuild the entire image through one internally coherent tribe-specific shawl code. Do not simply add "Naga" stripes, high contrast, or geometric motifs.

Reconstruct all visible forms so that shape, form, light, shadow, value, movement, and environment obey one belonging law.

The transformed image must become:

- tribe-specific rather than broadly Naga-inspired
- rule-bound rather than mixed
- woven and identity-bearing rather than decorative
- coherent rather than collage-like
- unified across figures, animals, props, architecture, terrain, and background

Do not let only the shawl become branch-correct while the rest of the frame stays generic.

Do not mix multiple tribe systems.

Do not let stereotype geometry replace real code coherence.

The final result must feel like the source image has been rebuilt by one tribe-signature Naga shawl civilization, not decorated with borrowed textile motifs.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image world rooted in one tribe-signature shawl grammar of Nagaland. This must not become a generic Naga geometric fantasy, a normal stylized world with "tribal" patterning, or a mixed code design exercise. It should feel like one authentic tribe-specific woven law has expanded into a broader world where characters, animals, architecture, mountains, props, sky division, and environment are all rebuilt through one coherent belonging system.

Keep the deep structure unchanged:

- one internally coherent tribe-law remains primary
- no mixed code remains allowed
- public belonging readability remains central
- body-cloth identity remains source-rooted
- handloom field discipline remains structural
- the whole frame remains generated by one tribe-signature law

Now let the world become richer:

- characters can be built from one code's band, block, stripe, and motif order
- animals can inherit one tribe-law's field coherence
- architecture can behave like spatial extensions of one geometric belonging system

- mountains, trees, ground, and sky can become organized by one internally coherent code
- shadows can deepen while preserving law-bound order
- space can become a world of one tribe-signature logic rather than ordinary landscape

Translate everything:

color, shape, line, form, light, shadow, volume, depth, character, animal, object, architecture, environment, and total scene behavior must all be rebuilt through one tribe-specific shawl grammar.

Avoid:

mixed tribal geometry, pan-Naga fantasy, “ethnic inspired” pattern worlds, stereotype textile styling, and ordinary stylized scenes with one tribe-coded shawl.

The final result must feel like one tribe-signature Naga shawl law itself has generated an imaginative unified 2D + 3D world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in one tribe-signature shawl world of Nagaland.

Preserve these style-core rules:

- one internally coherent tribe-law remains primary
- no mixed code remains allowed
- public belonging readability remains central
- body-cloth identity remains source-rooted
- handloom pattern discipline remains structural
- the whole frame remains generated by one tribe-signature law

Translate the scene like this:

- [MAIN SUBJECT] becomes a figure built from one tribe-specific field order rather than generic realism
- [SECONDARY SUBJECTS] obey the same belonging law
- [ANIMALS / OBJECTS / PROPS] become generated by one internally coherent woven code
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become organized by one geometric identity system without mixing outside laws
- [ENVIRONMENT] becomes a world of one tribe-signature coherence and belonging order
- [LIGHT / SHADOW] preserve law-bound pattern structure
- [SPACE / DEPTH] become code-space and belonging-space rather than ordinary scenic depth
- [MOVEMENT / ACTION] preserve the visibility of one internal woven law

Keep:

one-system coherence, identity readability, belonging order, handloom structure, branch purity.

Avoid:

mixed-code fantasy, pan-Naga design, stereotype tribal geometry, ordinary stylized scenes, and prop-only tribe-coded garments.

The final result must feel like the world was redesigned by one tribe-signature Naga shawl intelligence.

Image-to-Image

Convert this source image into a creative 2D + 3D tribe-signature Naga shawl world.

Preserve the source image's core action, readable relationships, and main scene meaning, but rebuild every visible element through one internally coherent tribe-specific shawl law. Do not stop at adding strong geometric cloth signals. Reconstruct shape, form, light, shadow, volume, depth, character design, environment, and spatial behavior so the whole image behaves like a world generated by one belonging code.

The transformed image must become:

- tribe-specific rather than generically Naga
- coherent rather than mixed
- identity-bearing rather than decorative
- woven and law-bound rather than stylistically borrowed
- unified across people, animals, props, architecture, terrain, and background

Do not let only selected garments become branch-correct.

Do not let the environment remain generic.

Do not let strong geometry replace one-system coherence.

The final result must feel like one tribe-signature Naga shawl law has expanded into a full imaginative world-state.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from one tribe-signature shawl grammar of Nagaland. This must not become ordinary realism with a tribe-specific shawl added later. It must feel like the entire world has become real under one internally coherent belonging law: band order, stripe rhythm, motif placement, public identity readability, and handloom field discipline controlling every visible element.

Translate the full style into dimensional reality:

- shape must remain code-specific and rule-bound

- form must remain identity-field-governed rather than generic realism-governed
- color must remain under one tribe-law
- light must preserve code coherence and woven readability
- shadow must support field distinction without dissolving belonging order
- volume must behave like real body-borne identity cloth and coherent code-generated world form
- depth must be built through one woven law rather than generic scenic realism
- characters, animals, props, architecture, terrain, and all environmental structures must feel generated through one tribe-signature law, not merely styled by it

Keep realism under branch control:

believable cloth weight, true code coherence, public belonging readability, handloom field structure, and total one-law world integrity.

Avoid:

ordinary realism with one tribe-coded shawl, mixed-code worlds, “Naga inspired” realism, stereotype geometry, and prop-only belonging accents.

The final result must feel like one tribe-signature Naga shawl world itself has become believable living reality.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from one tribe-signature shawl grammar of Nagaland.

Style system that must remain unchanged:

- one internally coherent tribe-law
- rule-bound field order
- public belonging readability
- body-cloth identity structure
- handloom pattern discipline
- whole-frame one-law coherence

Translate the scene like this:

- [MAIN SUBJECT] becomes a fully dimensional figure built from one coherent tribe-specific field code
- [SECONDARY SUBJECTS] obey the same belonging law
- [ANIMALS / OBJECTS / PROPS] become believable forms generated by one woven identity system
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become real spatial forms organized by one geometric belonging law
- [LIGHT / SHADOW] become realistic but still code-preserving
- [SPACE / DEPTH] become believable belonging-space rather than generic realism-space
- [MOVEMENT / PHYSICS] preserve the visibility and coherence of one internal shawl law

Increase:

cloth realism, code coherence, public belonging visibility, structural depth, one-law world completion.

Do not lose:

tribe-specific integrity, woven field order, belonging readability, branch purity, whole-frame coherence.

Avoid:

normal realism with tribe-coded shawls, mixed-code realism, generic Naga styling, stereotype geometry, and ordinary worlds with one coded garment.

The final result must feel like a real one-tribe-signature Naga shawl world.

Image-to-Image

Convert this source image into a full 3D realistic tribe-signature Naga shawl world.

Preserve the source image's subject count, readable action, and main relationships, but rebuild all visible forms through one internally coherent tribe-specific shawl law. Replace ordinary realism with one belonging code, one field order, one identity system, and one code-preserving world behavior.

The transformed image must become:

- tribe-specific rather than broadly Naga
- one-law coherent rather than mixed
- identity-bearing rather than decorative
- real in volume but still controlled by one woven belonging system
- unified across figures, animals, props, architecture, terrain, and environment

Do not let only selected garments become branch-correct.

Do not let realism take over.

Do not leave the rest of the world generic or mixed.

The final result must feel like one tribe-signature Naga shawl world has become believable reality.
