

Wrought Iron Crafts of Dindori - Madhya Prad...

V1 — Authentic Style

Universal Hard Prompt

Create a full image-world in the authentic source-faithful grammar of **Wrought Iron Crafts of Dindori**. Do not make an ordinary world with dark iron texture. Build the whole frame as if it were generated by **forged iron logic**: heated-and-bent members, hammered planes, chiseled accents, riveted or welded joints, rigid balance, and negative-space rhythm. Every form must feel built by force, not sculpted softly or cast smoothly. The world must read through forged silhouette, structural openings, cast-shadow geometry, and object-weight presence. No generic black-metal décor, no cast-metal smoothness, no realism with iron coating.

Reusable Variable Template

Create [SCENE / SUBJECT / OBJECT / WORLD] in the authentic source-faithful grammar of **Wrought Iron Crafts of Dindori**.

Translate everything through: forged silhouette, heated bend logic, hammered/chiseled articulation, join-based construction, rigid weight, and open negative-space rhythm.

[MAIN FORMS] become forged structures, not naturalistic volumes.

[DETAILS] become hammered or chiseled accents.

[CONNECTIONS] become riveted, welded, or structurally linked.

[SPACE] becomes open, interval-driven, and cast-shadow aware.

[SURFACES] read as worked iron with protective finish, never glossy luxury metal.

Avoid generic metal texture, cast sculpture, or ordinary realism with dark metal applied.

Image-to-Image

Convert this source image into the authentic source-faithful world of **Wrought Iron Crafts of Dindori**. Keep the major composition and subject relationships, but rebuild all forms as forged structures with hammered shaping, chiseled articulation, visible join logic, rigid balance, and negative-space rhythm. Replace naturalistic curves with bent metal curves, replace seamless bodies with assembled metal bodies, and rebuild the environment as a wrought structural world. Do not just darken the image or make it metallic.

V2 — Artisan Translation

Universal Hard Prompt

Create a full image-world in the **authentic handcrafted dimensional version** of **Wrought Iron Crafts of Dindori**. Keep the forged grammar intact, but make it richer in dimensional presence: deeper forged transitions, more tactile hammer memory, more legible join relationships, stronger shadow articulation, and more present structural rhythm. It must still

feel wrought, not cast, and still obey rigid iron-world physics. No generic artisan-metal mood, no fantasy iron architecture, no realism-first world with wrought accents.

Reusable Variable Template

Create **[SCENE / SUBJECT / WORLD]** in the authentic handcrafted dimensional version of **Wrought Iron Crafts of Dindori**.

Translate everything through: forged structure, join logic, hammered dimensionality, cast-shadow rhythm, and rigid world physics.

[MAIN BODIES] gain richer forged depth.

[JOINTS / CONNECTIONS] become clearer and more tactile.

[SHADOWS] become more structurally descriptive.

[SPACE] becomes more dimensional while staying open and negative-space aware.

Avoid cast smoothness, decorative black-metal mood, or realism-first mass with iron texture.

Image-to-Image

Convert this source image into the authentic handcrafted dimensional world of **Wrought Iron Crafts of Dindori**. Keep composition and core readability, but rebuild all visible forms as dimensional forged structures with deeper hammered transitions, clearer joins, sharper negative-space intervals, and stronger shadow-casting construction. The environment must feel built from wrought logic, not merely decorated with iron pieces.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic world** generated by the grammar of **Wrought Iron Crafts of Dindori**. The entire world must obey wrought law: forged mass, bent members, joined construction, rigid physics, open negative-space rhythm, and strong structural shadows. The result must not be a realistic world with iron decoration. It must feel as though wrought iron itself authored the architecture, figures, props, thresholds, and spatial intervals. Keep the world readable, cinematic, and fully dimensional, but never smooth, cast, or generic fantasy-metal.

Reusable Variable Template

Create **[SCENE / WORLD / EVENT]** as a fully volumetric cinematic version of **Wrought Iron Crafts of Dindori**.

Translate everything through: forged silhouette, heated bend logic, visible join law, rigid balance, shadow-structure, and negative-space worldbuilding.

[FIGURES / OBJECTS] become wrought structural beings and objects.

[ARCHITECTURE / PATHS / THRESHOLDS] become forged iron spatial systems.

[LIGHT / SHADOW] must describe structure, not atmosphere alone.

[ENVIRONMENT] must remain open, assembled, and wrought-authored.

Avoid dark-metal fantasy, ordinary realism with iron overlays, or cast-looking worlds.

Image-to-Image

Convert this source image into a fully volumetric cinematic world generated by **Wrought Iron Crafts of Dindori**. Preserve key composition and story readability, but rebuild all bodies, objects, and spaces as forged structural forms with hammered transitions, join logic, rigid weight, negative-space rhythm, and shadow-led construction. The result should feel like a cinematic wrought-iron world, not a realistic scene with ironized surfaces.
