

# Patola - Gujarat

## V1 — Authentic Style

### Universal Hard Prompt

Create an image in the authentic visual logic of Patola from Gujarat, specifically as a silk ikat weaving tradition rooted in Patan double ikat and the wider Patola family. Treat this as a woven image system built from pre-dyed yarn planning, not as generic luxury silk, not as printed textile, not as painted cloth, and not as embroidery-like ornament.

Build the entire image as if it is generated from real Patola weaving intelligence:

silk yarn as the primary material,  
design planned before weaving,  
ikat logic where dyed threads create the final image,  
precision alignment of warp and weft,  
figured woven motif field,  
ceremonial textile richness,  
repeat order and woven symmetry,  
thread-built motif edges rather than printed graphic edges,  
rich woven color integrated into the silk body rather than pasted on the surface.

Use Patola-specific visual behavior:

motifs must feel woven into the cloth structure,  
the field must feel figured and repeat-organized,  
the surface must feel silk-woven and thread-controlled,  
the image must preserve ceremonial and auspicious textile authority rather than generic decorative luxury.

If figures, animals, objects, architecture, landscape, or environment are present, rebuild all of them through Patola woven intelligence so the whole frame feels born from ikat-planned silk structure, not like a normal scene with Patola cloth inserted later.

Every important element must belong to one Patola system:

thread logic, motif order, edge behavior, silk material presence, and figured field organization must all feel woven-first.

Avoid:

generic patterned silk,  
printed luxury fabric,  
surface motif overlay,  
brocade drift,  
embroidery-first reading,  
fashion-editorial styling,  
one Patola textile patch inside an otherwise unrelated visual world.

## Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in the authentic visual logic of Patola from Gujarat.

Treat the style as a silk ikat weaving system built through pre-dyed yarn planning and precision weaving, not as generic luxury patterning.

Core style lock:

silk-woven identity,  
ikat-planned image construction,  
pre-dyed yarn logic,  
precision warp-weft alignment,  
figured motif field,  
repeat and symmetry order,  
thread-built motif edges,  
ceremonial textile presence,  
whole-frame Patola consistency.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a Patola-built woven presence with  
ikat-generated image logic.

[SECONDARY FIGURES / OBJECTS / FORMS] also obey the same woven silk grammar.

[EDGES / DIVISIONS / ZONES] become figured woven textile structures rather than printed boundaries.

[ENVIRONMENT] becomes organized through Patola motif order, woven symmetry, and silk-field intelligence.

Keep:

pre-woven ikat logic,  
silk material authority,  
thread-built pattern behavior,  
woven precision,  
figured motif order,  
ceremonial textile richness.

Avoid:

generic luxury silk,  
printed pattern edges,  
painted textile look,  
surface decoration added afterward,  
normal realism with Patola costume only.

## Image-to-Image

Convert this source image into the authentic visual world of Patola from Gujarat.

Preserve the source image's main subject relationships, action, and readability, but rebuild the entire image through Patola silk ikat weaving grammar.

Replace ordinary surfaces with silk-woven behavior.

Replace casual patterning with pre-dyed yarn intelligence.

Replace generic decorative motifs with figured woven Patola motif order.

Replace printed-looking edges with thread-built ikat edges.

Replace generic luxury color with rich woven color integrated into the silk structure.

If the source contains people, garments, props, objects, animals, or environment, convert all of them so they feel generated by Patola weaving intelligence instead of remaining normal realism.

Do not simply paste Patola motifs onto the source.

Do not leave the environment generic.

Do not make it look like printed designer silk or painted fabric.

The final image must feel like a real Patola woven system expanded across the whole frame.

## **V2 — Artisan Translation**

### **Universal Hard Prompt**

Create a creative 2D + 3D image translation rooted in Patola from Gujarat.

This is not generic patterned silk and not a full realistic world yet.

It must remain source-rooted in Patola weaving grammar:

silk ikat structure,

pre-dyed yarn planning,

figured woven motif fields,

precision alignment logic,

thread-built edges,

repeat and symmetry order,

ceremonial textile richness.

Let the image gain dimensional body, layered woven-field depth, stronger separation between motif zones, richer silk tactility, and clearer relation between central and surrounding woven structures.

But keep the image woven-field-first.

It should still feel like Patola weaving intelligence is constructing the image, not generic realism.

Allow motifs, surfaces, figures, objects, architecture, and environment to become more spatially alive, but they must still obey ikat-built pattern logic and woven order. The depth should feel like dimensionalized woven image-space, not like a fully realistic environment.

Avoid:

luxury silk styling without ikat logic,  
digitally clean print geometry,  
fashion-brand textile art,  
surface motif application,  
generic realism with Patola design added later,  
oversized motifs that stop feeling thread-built.

## **Reusable Variable Template**

Create [SUBJECT / SCENE / WORLD] as a creative 2D + 3D translation rooted in Patola from Gujarat.

Preserve these source-core rules:

Patola remains woven and ikat-built,  
pre-dyed yarn logic remains primary,  
precision alignment remains active,  
figured motif order remains structural,  
silk material identity remains visible,  
thread-built edge behavior remains present,  
the whole frame remains inside one Patola system.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a dimensionalized Patola woven-image zone.

[SECONDARY FORMS] also obey the same ikat-built woven structure.

[DIVISIONS / ZONES / EDGES] gain richer layering but remain woven and thread-organized.

[ENVIRONMENT] becomes a woven image-field rather than generic realism.

Let these become richer:

woven-field layering,  
motif-zone depth,  
silk tactility,  
image-body,  
relation between figured field and surrounding structure.

Keep unchanged:

ikat intelligence,  
woven precision,  
thread-built pattern behavior,  
silk-woven presence,

Patola ceremonial richness.

Avoid:

generic luxury décor,  
printed-fabric look,  
painted textile drift,  
fashion-editorial silk,  
full realism,  
one Patola section inside an unrelated image.

## **Image-to-Image**

Convert this source image into a creative 2D + 3D Patola translation from Gujarat.

Preserve the source image's main action, subject count, and readability, but reconstruct the full image through Patola woven-field grammar.

Replace ordinary surfaces with silk-woven behavior.  
Replace casual patterning with pre-dyed ikat image logic.  
Replace generic decorative order with Patola figured motif field, woven symmetry, and thread-built precision.

Allow the image to gain layered woven depth, stronger separation of motif zones, richer silk presence, and more visible image-body.  
But do not let it become full realism.  
It must still behave like a dimensionalized Patola woven field.

Do not paste motifs onto a normal image.  
Do not turn it into luxury printed silk styling.  
Do not let decorative richness overpower ikat structure.

The result must feel like Patola weaving logic has gained image-body, not that a scene has been decorated afterward.

## **V3 — 3D / Realistic / Cinematic Translation**

### **Universal Hard Prompt**

Create a believable full 3D realistic dimensional world generated from Patola of Gujarat.

The realism must remain fully governed by Patola weaving grammar, not by generic realism.  
Build the whole world through:  
silk ikat structure,  
pre-dyed yarn planning,

precision warp-weft alignment,  
figured woven motif fields,  
thread-built edges,  
ceremonial textile richness,  
repeat and symmetry order,  
woven silk material behavior.

The world must feel as if Patola weaving intelligence has become a complete dimensional reality.

Figures, clothing, objects, architecture, surfaces, environment, and spatial divisions must all belong to one woven Patola system.

Pattern must still feel thread-built, not printed.

Color must still feel integrated into woven silk, not painted or digitally laid on top.

Motif order and figured field logic must still structure the world.

Make the space fully volumetric and believable, but do not let realism erase the woven origin.

This is not normal realism with Patola motifs.

This is Patola grammar becoming world structure.

Avoid:

generic premium silk environment,  
printed-fabric realism,  
surface motif application,  
fashion-catalog styling,  
brocade-like luxury drift,  
normal scene logic dominating over woven ikat logic.

## **Reusable Variable Template**

Create [SUBJECT / SCENE / WORLD] as a full 3D realistic dimensional world generated from Patola of Gujarat.

Style system that must remain unchanged:

Patola remains ikat-woven,  
pre-dyed yarn logic remains primary,  
precision alignment remains structural,  
figured motif fields remain active,  
silk material identity remains visible,  
thread-built pattern edges remain present,  
whole-frame Patola consistency remains intact.

Translate the world like this:

[MAIN SUBJECT / MAIN FIELD] becomes a fully dimensional Patola-governed woven presence.

[SECONDARY FORMS / FIGURES / OBJECTS] become volumetric but remain thread-built and woven-ordered.

[DIVISIONS / ZONES / EDGES] continue to structure the world like woven textile architecture.

[ENVIRONMENT] becomes a believable spatial field organized by Patola motif order and silk ikat intelligence.

Increase:

full spatial depth,  
material presence,  
woven silk tactility,  
field continuity,  
world completion.

Do not lose:

pre-woven ikat logic,  
thread-built structure,  
woven precision,  
figured motif order,  
ceremonial textile authority,  
Patola world-logic.

Avoid:

generic realistic luxury silk,  
printed-surface look,  
pattern decal behavior,  
fashion styling,  
Patola as accessory instead of world structure.

## **Image-to-Image**

Convert this source image into a full 3D realistic Patola world from Gujarat.

Preserve the source image's main composition, subject relationships, and readability, but rebuild the whole image through Patola woven-world grammar.

Replace normal realism with a world governed by silk ikat intelligence, pre-dyed yarn planning, precise warp-weft pattern alignment, figured motif order, thread-built edges, and ceremonial woven richness.

If the source contains figures, garments, props, objects, architecture, or environment, convert all of them so they behave as if generated from Patola weaving intelligence.

Keep pattern thread-built and structurally plausible.

Keep the whole frame organized by woven field order rather than generic realistic arrangement.

Keep the result silk-rich but textile-authentic, not glossy synthetic luxury.

Do not simply apply Patola motifs over the image.

Do not leave the environment or secondary forms generic.

Do not turn it into printed designer silk realism.

The final result must feel like Patola itself generated the world.
